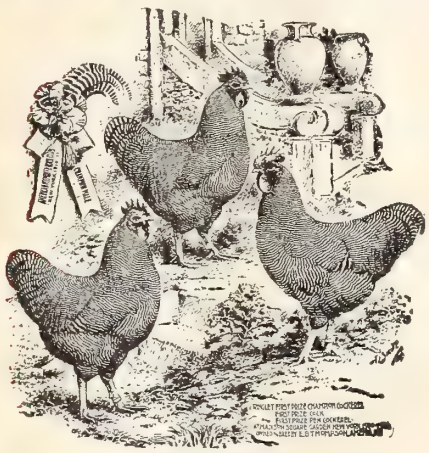
E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks

Eclipse all former achievements and win the most brilliant record of their time at Madison Square Garden, New York, this Winter of 1914, winning as follows:

ALL RIBBONS ON COCKERELS, namely, first, second, third, fourth and fifth prizes.

First and fourth on Cocks.

First, second and fourth on Exhibition Pens.



The Imperial prize of the show, Sweepstakes Special for Champion Male.

Medallion for Champion Cockerel.

Diploma presented by the American Poultry Association for Best Cockerel.

Spec'l for Best Shaped Male.

Spec'l for Best Colored Male.

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York.

Silver Cup for Best Plymouth Rock hatched in 1913, male or female, any variety.

Specials presented by the President of the American Barred Rock Club for Best Cockerel and Best Pullet.

Three Best Cockerels; Best Display; Best Collection.

Silver Cup presented by the New York Sun for best Cock, Hen, Cockerel, Pullet and Pen.

Sweepstakes Silver Cup for Best Exhibition Pen.

The Association $25 in Gold for Best Display.

All Silver Cups and Cash Specials.

Three times as many first Prizes as any Barred Rock Exhibitor.

More First, Regular and Special Prizes than any Exhibitor of any breed.

My exhibit was the most illustrious ever presented to the world —every winning feather was bred on my farm.

The amazing record of **1st, 2nd, 3rd, 4th and 5th prizes** on Cockerels—every Regular and Special Prize offered—stands unmatched in the history of Madison Square Garden. It is unequalled. These cockerels and hundreds of their brothers on my farm are beyond comparison—they are the Finest in the World.

If you want to win and breed winners you must have my Imperial "Ringlets."

They are the standard by which all other Barred Rocks are judged. The great twin records at Madison Sq. Garden, N. Y., 1913 and 1914—two years in succession—spell **Imperial "Ringlet" Supremacy.**

OUR SPECIAL SALE

with greatly reduced prices is being appreciated and the bargains are many. By the large saving in various ways in consolidation we are in position to save you money.

Never in the History of the Fancy Poultry Business

has anything been done that will improve conditions and assist the poultry buying public in reduction of prices as will the uniting of these successful farms. Our saving is enormous and our customers are going to reap the benefits. No need to go into details about the **quality** of the fowls we offer you, as the records won for the past years are proof positive **there is no better.**

DO YOU WANT TO WIN? WE CAN SUPPLY YOU WINNERS

for your fall show. Our SERVICE DEPARTMENT will buy or sell for you anything in the way of Poultry, Dogs, Animals or Ornamental Birds. THE BEST IN POULTRY FEEDS, the kind we know of over thirty years' experience will give results. The United Poultry Farms beg an opportunity to prove to you their ability to give you better value for your money than you can secure anywhere. SALE LISTS FREE. Special Prices on Eggs and Chicks.

1st Old Chicago Pen 1913-14, Bred and Owned by F. E. Harrison, Menominee, Mich.

F. E. HARRISON'S ARISTOCRATIC ROYAL RED S. C. R. I. REDS

Are the acknowledged champions by virtue of a show record unequalled by any competitor.

In the last two Chicago Coliseum Shows, 1912-13 and 1913-14 (note the dates), Royal Reds won nine out of a possible twelve firsts, competing with seventy-four competitors, none of which won more than one first.

In addition to this, in these two great shows, Royal Reds won five seconds, four thirds, three fourths, and two fifths, and three times as many color specials, shape specials and championships as all other competitors combined, and best display at both shows. Think this over.

Catalogue free for the asking.

THE BEST BLOOD LINES

Tecktonius-Reed Strains

R. C. S. C. Buff Leghorns

The fame of **"Tecktonius" Buffs—America's Champion exhibition and laying fowl**—is world wide. Big exhibition prizes, everywhere, at their mercy—not once, but for **7 consecutive years.** Their laying record, as well, is as long and brilliant, with 249½ average in 1912 Nat'l Laying Contest—one bird 281 high. "Tecktonius" Buffs **build "winning" reputations, and make "big money"** for poultrymen. Put your trust in them and be a "winner" as a poultryman.

S. C. Rhode Island Reds

Reed's Champion Single Comb Rhode Island Reds are the outcome of **seven years efforts** of B. C. Reed—one of the most scientific and successful breeders this country has ever known. He is an expert at mating and has by his untiring efforts perfected a strain of Reds that are second to none.

If you want to get into the class of **"winners"** do not overlook this grand strain of Reds.

See special offers below.

Some Unrivaled Tecktonius Strain Bargains

S. C. Matings--Pens 1 to 6 inclusive, one 15-egg setting, $10; two, $18, three, $25.
Random Selection--If selected from one pen, in which price rules, $5 per setting, extra. Pens 7 to 10 inclusive, one setting, $5; two, $9; four, $15. Pens 11 to 14, inclusive, $2 per setting; $10 for one hundred
R. C. Matings--Pens 15 and 16, one setting, $15; two, $25.
S. C. Utility Stock--Hens, $2; Cockerels, $3 and $5; trios and pens, $10 and $15.
Exhibition Stock--Hens, $5; Cockerels, $15 and $25; trios and pens, $25 to $50.

No Chicks of Either Variety For Sale. Mating List Free.

Special Introductory Offer—Reed's Strain S. C. R. I. Reds

We have mated 6 pens of these Royal Bred birds--the cream of 565--comprising 2 Cocks, 4 Cockerels, 20 Hens and 40 Pullets Everyone is a marvel of breeding, with exquisite, rich even Red Color, and with absolutely no contrast between hackle, back and sickle feathers The tail and wing markings are as near perfection, as scientific breeding can make them. Both male and female types come up to standard requirements, and well over standard in breeding weight. From all pens above described, we will sell eggs as follows: One 15 egg setting, $5; two, $9; four, $15; per one hundred, $25.

No Stock For Sale Until Fall. No Chicks For Sale.

Special—A 50 % reduction from above prices on all egg settings from my S. and R. C. Buff Leghorn and S. C. R. I. Red pens; and a 25% reduction from my established list price on all S. and R. C. Buff Leghorn stock; effective June 1, 1914, and good until August 31, 1914.

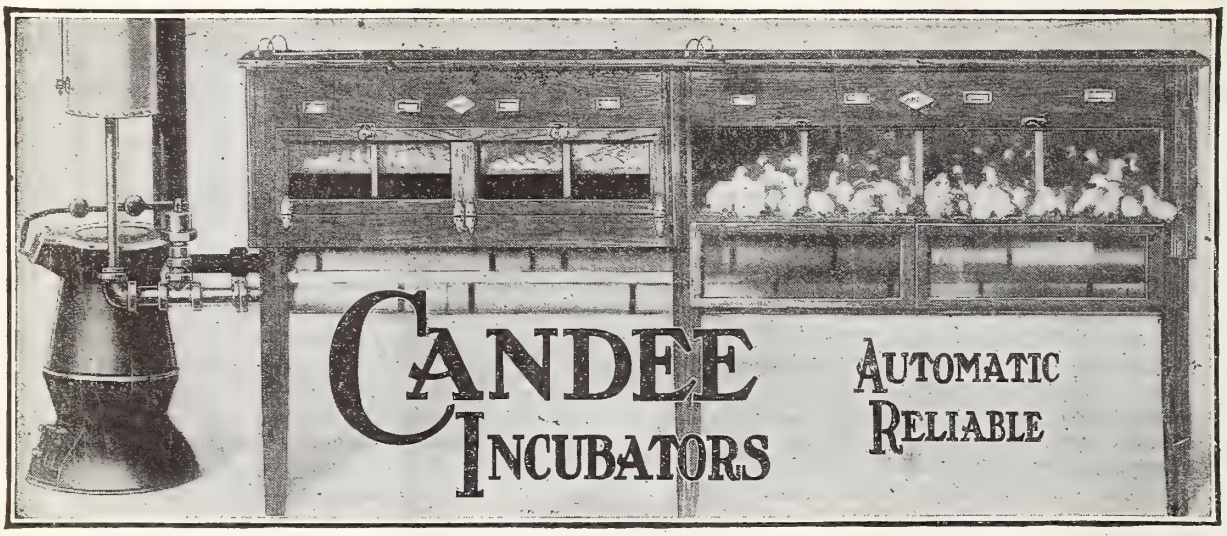
White Wyandottes



have the reputation of winning the most coveted prizes at the Fall Fairs and early winter shows.

I can supply you with birds that will not be overlooked by any judge. Birds that possess the proper qualifications—broad back—deep body—well spread tails and perfect head points.

Send for illustrated catalog and moderate prices.
Satisfaction guaranteed or money refunded.

GEO. H. RUDY, Route 15, MATTOON, ILLINOIS

Simple to Install --- Simple to Operate

Anyone anywhere can set up a Candee.

Because it is Shipped-all-Built.

Take the 1200-egg size, illustrated above.

The heater parts are assembled in a few minutes. The pipe fittings have been attached at the factory before shipping.

The legs are quickly set up and the two supply pipes screwed together.

Lift on the two sections, connect two small pipes from the supply to each section and you are ready to start the fire.

Larger sizes simply mean a little longer time.

Just as Easy to Increase

Take off the rear panel, set up the extra legs, extend the two pipes and add the extra sections.

That's the way Candee customers do.

That's why you can start with the smallest size—the 1200—and add on as your business grows. Buy as you need them. When you require a larger heater, heaters are exchanged free.

Wherever You Live

Distance makes no difference. About 95% of our customers set up their own machines.

Our true sectional construction makes it easy for our customers and saves them thousands of dollars.

What Size to Order

Start with a 1200, if you prefer. That has every Candee feature, has four 300-egg compartments and will give you a good start in poultry the first year.

If you need additional hatching capacity, you cannot in justice to yourself afford not to put in at least a 1200 Candee when the great majority of mammoth users have Candees.

It is easily operated in 11 by 14 feet of floor space and a house cellar is satisfactory.

For Baby Chicks

Use it for your own work and any spare space is quickly filled with custom hatching.

If you have surplus eggs, turn them into day-old chicks and you will find this very profitable. In fact, in this work a Candee easily pays for itself the very first year.

Expert knowledge is not required.

The automatic features of the Candee make operation easy for anyone.

Coal the heater as you would any stove.

Set the heater regulator and leave it alone. A hot water thermometer shows you the temperature of the main supply.

Set a 300-egg compartment and run it just as you would a small machine. The one heater takes the place of all the oil lamps.

Operation of the Candee is not to be judged by previous incubator experience—the Candee only requires attention when the eggs need caring for.

Safety in Incubating

The automatic regulators on the heater and egg chambers make a double protection against overheating the eggs in hot weather or changeable days.

They simplify operation because they do automatically the work that would otherwise have to be done by the operator.

They give him his liberty and freedom to attend to other work.

The fire danger is removed—no chance for any explosion—the pipes are all open at the open—no worry or fear.

A Matter of Dollars and Cents

It's a matter of record that the saving in fuel alone in a season more than pays the interest on a Candee.

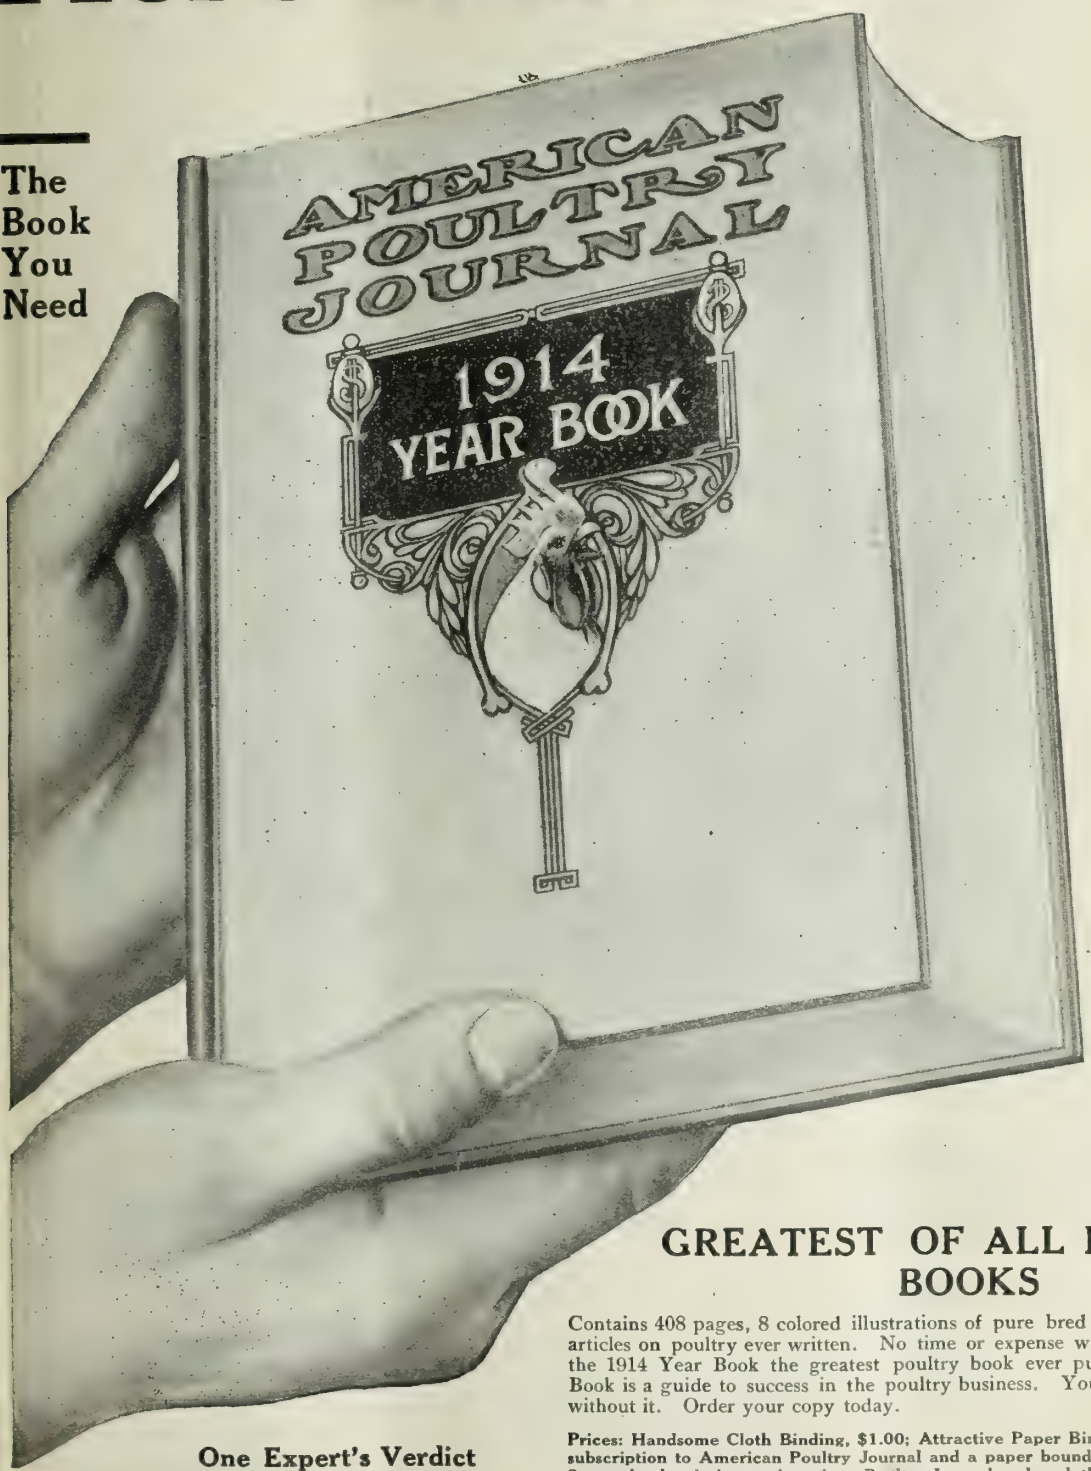
Reckon up the saving in labor and attention.

Then include the superior worth of Candee hatched chicks—big, strong, fluffy fellows that have been incubated with a steady, even, healthy heat—the kind that live and grow.

Used in Every Section

The Candee is today in international use. The growth has been remarkable. Its success has been phenomenal. The triumph of the Candee has been overwhelming.

Our 108-page catalogue shows hundreds of farms using the Candee, but this can only show a part of the army of Candee users.



We will gladly send you the catalogue free and give you a list of users in your own section—men you may know personally, and can ask them their results and opinion.

Prices: Handsome Cloth Binding, $1.00; Attractive Paper Binding, 50c; or 1 year's subscription to American Poultry Journal and a paper bound Year Book for $1.25; 3 years' subscription to American Poultry Journal and a cloth bound Year Book for $2.50. **Your money back if you are not satisfied.**

American Poultry Journal Pub. Co. 542 S. Dearborn Street CHICAGO, ILLINOIS

One Expert's Verdict

Gentlemen: Your 1914 Year Book has just been received. This, I find, is a valuable book, much more so, in my opinion, than the one which you issued last year. I find it crammed full of valuable information from cover to cover. Yours very truly, T. E. Quisenberry, Director Missouri State Poultry Experiment Station, Mountain Grove, Mo.

A Poultryman's Time Is Valuable

A Crow Elk-Hart motor car will save him time and relieve him of the needless exertion and worry due to inadequate means of conveyance

The Poultryman who buys a Crow Elk-Hart now, will congratulate himself many times on his choice before the season is over. The reason is more evident after one has experienced the satisfaction of riding in a Crow Elk-Hart.

Crow Elk-Hart Cars are built in ten distinct models

You have your option of the graceful four or six cylinder roadsters, or any one of the handsomely appointed touring cars.

These cars are powerful, silent running and comfortable. They are sold at honest prices that deserve the earnest consideration of those desiring to own a

HIGH GRADE MOTOR CAR

Your written request for further information will be complied with immediately.

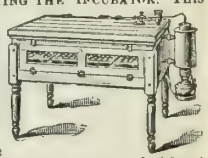
SHOEMAKER'S POULTRY BOOK



AND ALMANAC.

There is nothing in the world like it. It contains over 200 large pages, with many fine illustrations. A number of BEAUTIFUL COLORED PLATES OF FOWLS —showing them in their natural color. Tells all about all kinds of thoroughbred chickens, with life-like illustrations. Prices of eggs for hatching and fowls for breeding purposes. TELLS HOW TO RAISE POULTRY SUCCESSFULLY, their care and management and how to treat all diseases common among them. Gives illustrations and descriptions of convenient poultry houses, and plans to build them.

ALL ABOUT "GLOBE"

INCUBATORS & BROODERS

with fine illustrations, complete description, and lowest prices. ALL ABOUT OPERATING THE INCUBATOR. This chapter is marvelously complete, and worth much more than the price we ask for the whole book. This Poultry Book is worth dollars to anyone interested in the raising of fowls. IT IS AN ENCYCLOPEDIA OF CHICKENDOM, and no one can well afford to be without it. Will be mailed to anyone upon receipt of only 15c. Money refunded if not pleased.

C. C. SHOEMAKER, Box 605, Freeport, Ill.

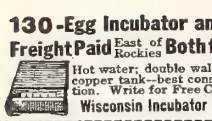
LOUSE POWDERS

are many, Lee's is the best buy. First, because a pound and a quarter for 25 cts. instead of the usual 15 ounces; second because obtainable at most every town; third because complying fully with the Insecticide Law. Equally good for grown fowls or chicks. Especially fine for setting hens. You cannot raise chickens profitably unless kept free from lice and you need something that is economical and easy to use as well as effective. That's Lee's. Put up in round sprinkler top cans. 2 sizes, 25 cts. and 50 cts.

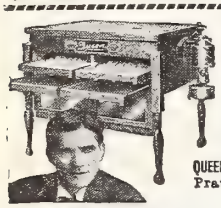
Sold by 10,000 dealers in U. S. and Canada. Write for free poultry books and pamphlets.

GEO. H. LEE CO., OMAHA, NEBR.

YOUNG CHICKS



die of bowel trouble more than any other cause. It is estimated that of every 1000 chicks hatched each year less than 400 reach marketable size. Germozone users raise, usually, 90% of chicks hatched. Germozone keeps the bowels regular. It prevents diarrhoea from overdrinking of water; from eating musty or spoiled food, etc. It should be given in drinking water twice a week from the day they are hatched. It stops the loss. Every chick that dies cuts badly into the profit from the rest. Every chick saved will pay the cost of a bottle of Germozone.



One size only, 50 cents, at dealer's or postpaid.

GEO. H. LEE CO. Omaha, Nebr.

are winners at the shows and, besides, are the best profit producers in the poultry yard. These birds are large, heavy, healthy and full of stamina—beautiful yet intensely practical. Write for free descriptive circular and mating list.

Barred Plymouth Rocks
Eggs and Baby Chicks
We are now selling eggs from our prize winners of the Chicago, Indianapolis, Memphis, Louisville, Knoxville and Nashville shows at less than half price. They are the same eggs we sold this spring at our regular prices and they are from the same birds we are raising all of our own exhibition stock.
Eggs $1.00 per 15 $5.00 per 100
We also offer exceptionally low prices on our surplus breeding stock and as long as they last will sell our best breeders at the closest possible figures. If you are interested in fine Barred Plymouth Rocks, write us and we will send you one of the finest catalogues published of this breed. Write today for 40-page catalogue No. 3
POPE & POPE, Box A Louisville, Ky.

The Automatic
—Single and Double Decks—
The name "Automatic" is applied to the Newtown Giant Incubator because **it automatically performs every important hatching operation.**
A simple turn of a handle at its end turns 10,000 eggs in half a minute.
Pour a supply of coal into the magazine of its heater this morning and you need not do it again until tomorrow—the coal feeds automatically.
It has an automatic Regulator at its heater and an automatic temperature and moisture Regulator at each compartment. These compel a constant, even heat in each compartment of the
NEWTOWN Giant Incubator
If there should be an accident and your eggs endangered, a bell will ring in your bed-room, giving warning. This device will turn your wakeful nights into nights of restful slumber.
The Newtown Giant has five Automatic Safeguards against "off" temperature.
Absolute safety of your eggs—bigger and better hatches with the least labor and expense—that's what you want for your Incubator investment. You'll get all of this with a Newtown Giant.
And you can double your hatching capacity with the double deck Newtown, saving half on cellar construction.
Now is the time to plan for your large Incubator. We are here to help you—that's our business. You are entirely welcome to all the information and assistance we can give you and you are placed under no obligation by accepting it.
What size machine do you contemplate installing? What are the dimensions of your cellar? Or shall we send you blue print plans to help you build one?
Your copy of our catalog is waiting for you. Send for it now and put our Service Department to work helping you to solve your hatching problems.

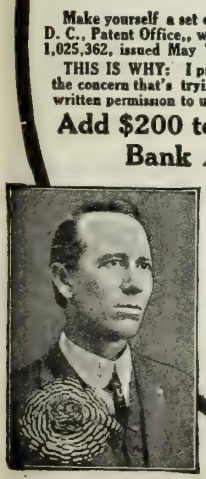
~~50 cents~~
10 cents
NOW TO YOU

A half dollar book for a dime. And if you haven't a dime, send a two cent stamp and I will send you

"What's a Capon, and Why"

By George Beuoy, "The Capon King"

Brand new regular 50-cent edition, 60 pages, 40 fine half tone illustrations. Shows you exactly how to caponize and all about it. No up-to-date poultry grower who wants to get all the profit there is in it can afford to be without this book.



Use My Patent Free

Make yourself a set of capon tools. You can do it easily, 5 cents (Coin, not stamps) sent to Washington D. C., Patent Office,, will bring you copy of my patent, blue prints and full description. Ask for Patent No. 1,025,362, issued May 7, 1912, to George Beuoy.

THIS IS WHY: I prefer to give my patent away to poultry growers rather than spend all I have to fight the concern that's trying to steal it. It's 50 years ahead of theirs—So they want it. I will send you my written permission to use my patent for making one set of tools. Write for it.

Add $200 to $400 to your Bank Account

You can make your capons bring you $1.50 to $2.50 apiece. Mine have brought me $1.00 net profit each for the last six years. Infertile eggs alone will make it pay you. And with my Capon Tools anyone can caponize. Formerly it took an expert. These instruments make it simple and easy.

If You Want Me to Make Your Tools

Send me $3.50 for the full set—the same that I use—or $1.75 for the Remover, shown in illustration above. These are made in my modern farm factory. They are 50 years ahead of other styles. They are ajusted to a razor fineness and tested by a fine hair. I guarantee them to satisfy, or money back. Or sent C. O. D. by parcel post.

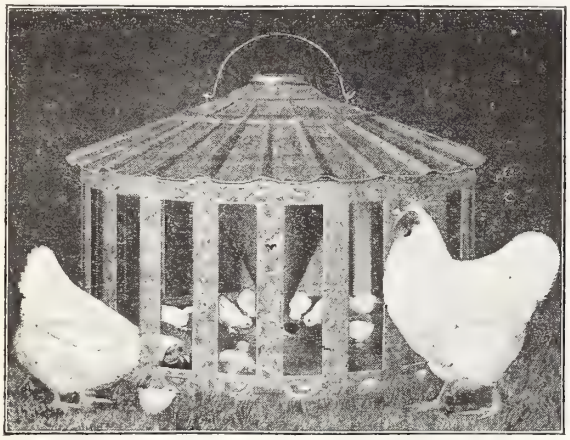
ALDRICH WHITE ORPINGTONS

The Strain of Quality

IF you are counting on WINNING AT YOUR SHOW we can supply you the PRIZE-WINNING QUALITY, for we have this year the best birds we have ever bred in White Orpingtons, many of them from our Madison Square and Chicago winners of last December.



At the great MADISON SQUARE GARDEN SHOW, 1913, we made a clean sweep, winning 1st, 2nd and 3rd cockerel, 1st, 3rd and 4th cock, 1st pen, 1st hen and 2nd pullet, and BEST DISPLAY; while at CHICAGO we won 1st and 3rd cock, 1st, 2nd and 5th cockerel, 1st young pen, 1st old pen, 2nd and 4th hen, (no pullets shown), and BEST DISPLAY; also specials for best colored and best shaped male, thus establishing our claim to the QUALITY WHITE ORPINGTONS OF AMERICA.

Our young birds this year are much superior to those of last season, and we have out more early stock that will be up to weight for the early fall shows, but on account of the big demand which we expect this season, we would advise you to book your order at the earliest possible moment to avoid disappointment and get the best possible selection, as we only sell to one customer in each class at a show. We condition all birds for the shows free of charge, and will send them to you in faultless form.

Let us quote you prices on **show birds** or **large vigorous breeders** to build up your flock. We will reserve you a winner and condition same, on receipt of a **small deposit** at the present time. Send for our 60-page catalogue, and you will become one of our many satisfied customers. Mention the A. P. J. when writing.

No Occasion for White Diarrhoea Scare

Disease Does Not Show any Alarming Increase—No Difficulty Experienced in Obtaining Chicks Free From Infection.

By Prince T. Woods, M. D.

WE DO NOT BELIEVE that it is advisable to attempt to "campaign" or to legislate disease out of existence. In our opinion the only sensible way to eradicate poultry diseases is to present more facts and less fiction concerning them to the poultry loving public, to educate the people how to keep, breed, hatch and grow healthy poultry. We are not in sympathy with the Storrs Agricultural Experiment Station's "campaign for the eradication of bacillary white diarrhoea of young chicks" and believe that the measure and the manner of promoting it is ill-advised. Although a member of the "Committee on the Control of the Distribution of Poultry Diseases" of the A. P. A., we do not consider that it is advisable for the association to attempt to legislate for the control of poultry diseases, though it might do effective educational work to encourage breeding for health and maximum constitutional vigor. Neither diseases nor the owners of diseased stock are likely to pay a great deal of attention to campaigns or to legislative measures.

We go around a great deal and visit a good many poultry plants. We have found a small percentage of diseased specimens on some experimental plants where the stock had been shipped in from all over the country, but the number of sick fowls and the percentage of mortality was low considering the number of the fowls and the fact that they came from widely scattered flocks and all sorts and conditions of poultry. While we visit a good many poultry plants for observation purposes, we frequently are called for the purpose of diagnosing some troublesome ailment and recommending a remedy. We also receive and answer thousands of queries from poultrymen and have been conducting information bureau correspondence of this sort for a good many years. If there was any alarming increase in the prevalence of poultry diseases, and particularly of so-called white diarrhoea, we would be likely to know about it. It is our opinion, based on practical experience, that poultry diseases are less prevalent and troublesome today than they have been for the past dozen or fifteen years, all things considered. During the past few years there has been marked improvement in the condition of the majority of the flocks which have come under our observation. We believe that the reason for this is that poultry keepers generally know better than they did how to house, feed and care for their poultry and that they are beginning to realize the importance of constitutional vigor in their flocks and of breeding for health.

So-called white diarrhoea, so far as our personal observation goes, has not shown any alarming increase. Occasionally we are called upon to visit a plant where the disease appears to be epidemic. In fifteen years' experience with white diarrhoea epidemics we have only found half a dozen cases where the only effective remedy appeared to be getting rid of *all* the breeding stock and making a fresh start. On a great many plants, culling the flock of breeders to leave only apparently sound, healthy specimens, cleaning up and disinfecting the houses and runs, more careful attention to feeding, disinfecting the incubators and even dipping the eggs for hatching in a solution of creolin, one gill in 8½ quarts of soft water, was all that was required to stamp out diarrhoeal troubles where chick mortality had been alarming. Constitutional vigor in the breeding stock, cleanliness and good management combined with the "know how" are the chief requisites of successful chick growing. Now and then a brood or several broods of chicks will go wrong and show considerable mortality, but, though diarrhoea may be present, it does not necessarily mean that the chicks have white diarrhoea or are infected with *bacterium pullorum, coccidium tenellum, aspergillus fumigatus* or other special disease producing micro-organism.

Dr. Rettger, of Storrs Station, deserves full credit and appreciation for his work in the investigation of *bacterium pullorum* and bacillary white diarrhoea which results from infection with this disease germ. But other investigators have found other germs that produce similar symptoms and similar mortality in baby chicks. It is difficult to make a positive diagnosis in diseases of chicks under a month old. It is difficult to differentiate the symptoms of several ailments which affect young chicks and cause mortality. We have not visited Storrs for about two years, but we have twice visited the Station plant during the investigation of white diarrhoea and viewed the experimental broods with considerable interest. With all deference to the investigators, we do not believe we could produce or grow healthy chicks on that "white diarrhoea experimental plant," with the equipment in use and under the conditions prevailing at the time of our visits, although we have had considerable experience and are fairly adept at growing good chicks. We wouldn't try to grow chickens that way at home and we see no valid reason why experimental flocks should be predisposed to trouble by being so handicapped at the start and throughout the test.

In the human family disease germs are frequently found in the mouth, throat, and intestinal tract of perfectly normal, healthy individuals. The presence of disease producing micro-organisms does not necessarily obligate a positive diagnosis of disease. If it did most of us would be in quarantine most of the time. It is quite probable that the case is much the same with chicks and fowls. Disease germs become dangerous when the individual is thrown off the normal disease-resisting balance and becomes susceptible.

While we have no dispute with those who hold that certain specific micro-organisms cause infectious diarrhoea and that the trouble frequently originates in infected parent stock, we do know that there are other causes for PRECISELY THE SAME OBSERVABLE SYMPTOMS in young chicks. In 1908 we wrote:

"In investigating the causes of so-called white diarrhoea there are four general sources of trouble that demand your attention.

"FIRST—*The condition of the breeding stock from which the eggs for hatching were taken.*

"SECOND—*Carelessness in selection, handling, keeping and care of eggs intended for hatching purposes.*

"THIRD—*Faulty incubation.*

"FOURTH—*Errors in brooding or feeding.*"

Naturally if the parent stock were infected with some specific and transmissible germ disease that should be considered under "condition." Sound, healthy, vigorous breeding stock is always one of the prime requisites of securing livable chicks.

Eggs ill-kept in too warm a room, or under damp and filthy conditions where flies abound, and stale eggs are likely to produce weakling chicks if they hatch at all. Weakling chicks are generally born to die, either with or without infection with some specific germ. Our description of weakling chicks that are particularly liable to exhibit white diarrhoea symptoms has been widely quoted and is as follows:

"The weakling is almost always big-bellied, the abdomen protruding to the rear so that it bunches out behind well out of line of the vent, with the result that the chick looks as if the tail piece and back bone had been pushed forward and in just above the vent. As the chick grows older these conditions become more exaggerated and it is wabbly on its legs. Sometimes the deformity is so considerable that when the chick voids excrement it seems almost impossible to eject it over the protruding abdomen without having it come in contact with and soil the down. In many cases the chick cannot force the droppings beyond the fluff or down on the abdomen and the excretion dries on until the little bird is in the condition commonly known as "pasted up behind." At this time the upper margin of the vent usually protrudes to a considerable extent beyond the lower margin and sometimes takes on a red and inflamed appearance."

Faulty incubation frequently results in a considerable number of weakling chicks. During the first few weeks of a chick's life it does not take very much to upset its digestive organs and make it susceptible to infection. Sour food, mouldy food, spoiled grain, stale chick foods, poor beef scraps will all promote a condition that results in the development of so-called white diarrhoea symptoms. Severe chilling will frequently cause the trouble, but more commonly over-heating during mild or warm weather, over-crowding and a too scanty supply of fresh breathing air, result in diarrhoeal troubles and mortality.

We believe that Storrs is unduly alarmed concerning the presumed prevalence of bacillary white diarrhoea. We have not found it to be particularly prevalent this season and have not had nearly as many cases come under our observation as in former years, although this has not been a season of good chicken raising weather in our home section of the country. We note that the circular states that great difficulty has been experienced in obtaining eggs for hatching and day-old chicks free from infection. We have experienced no such difficulty and we have twice sent Storrs a list of plants where eggs and chicks might be obtained and where we had never known of a single case of white diarrhoea. The past three years we have bought a good many day-old chicks and eggs for hatching and have not yet received any that showed white diarrhoeal infection.

Last year we obtained a small flock of chickens that were about half grown and were from a flock that "had not done well" for the man who hatched them. The mortality in this flock had been high. We put these chicks on a large range,

Scene on the Granock Farms, owned by Stewart Haddock, Poughkeepsie, N. Y. This farm is devoted to the production of high-class Single Comb White Leghorns exclusively.

part grass land and partly wooded. We raised the whole lot and after they had been with us two weeks the growth and development was surprising. We bred these birds this spring and hatched chicks in incubator and under hens. The first lots under hens ran from 5 to 13 chickens to the sitting, most of them good, strong, livable chicks. The first incubator lot was 130 chicks divided into two brooder flocks. One flock showed almost no mortality while in the other brood the mortality was quite heavy. Weather was cold, wet and unfavorable during first three weeks the chicks were in brooders. The brooders were side by side, were the same make and operated alike, the broods were fed exactly alike. But in one brooder the lamp was balky because of a defective burner and wick and on one cold night the chickens were not found to be comfortably warm in the morning and on another night the lamp "drew up" and made the brooder over-warm for a mild night following a sudden change in weather. The trouble with these chicks might easily have been diagnosed white diarrhoea. It presented typical white diarrhoea symptoms. Isn't it probable that many poultry keepers observing broods similarly affected might believe their chicks had white diarrhoea?

We were not certain as to diagnosis and do not know positively now that the chicks were not infected. Before those chicks were four weeks old we removed them from the brooders, which were thoroughly cleansed and disinfected. The chicks were given a fireless hover in a 3 x 6 colony coop, were provided with large grass range and were fed on fresh ground chick food, a moist mash of fresh ground grains (oats, ground hulls and all) mixed with scalded beef scrap and given frequent full feedings of scalded fresh fish. They began to improve at once and in a few days losses stopped. Seventy-five strong chicks were saved out of the original 130. From the same breeding stock 172 chicks were hatched in a No. 2 Cyphers incubator from 210 fertile eggs. Fifty of these chicks were sold day-old and gave a good account of themselves. The balance were placed in the two brooders, all but ten, which were added to the flock of a good hen. The losses did not exceed two per cent. The hen chicks and brooder chicks show about the same development and have grown well. Would it be worth while to have such stock tested (by a test of doubtful value) to ascertain if white diarrhoea germs are present? We think not.

The Storrs campaign proposes to carry on a system of blood testing whereby flocks of mature hens that are to be kept over as breeders in 1915 may be tested and if test proves favorable, for a modest fee, be certified free from white diarrhoea infection. The test is known as the blood agglutination test and is presented in the circular as an infallible test for detecting infection with white diarrhoea. We believe that too much is claimed for this test and other investigators have not found it to be as positive as our friends in Connecticut appear to believe it to be.

For all practical purposes we believe that an experienced poultry keeper, who is at all familiar with the flock, can select good, sound, healthy breeding specimens without the need of resorting to laboratory tests. In going about the past season we have not found white diarrhoea to be alarmingly prevalent in the East or Central States.

We have found a good deal of trouble due to spoiled grains, poor beef scraps, and stale and mouldy ready-mixed chick foods, also to spoiled corn, both that affected with smut and with "green heart." We have seen broods doing wonderfully well, with little or no mortality, in the hands of novices and have heard very little complaint from purchasers of day-old chicks. In some localities eggs have not hatched over well owing to low fertility and, where the equipment was inadequate to cope with weather conditions and severe sudden changes, there has been some difficulty experienced in growing chicks, but it isn't fair to blame it all on white diarrhoea.

Given a reasonable amount of common sense, the "know how" obtained by experience or from a good instruction book, well hatched chicks, good food, good care and good management you can grow chickens and need not be unduly alarmed about white diarrhoea.

It frequently happens, and particularly with large broods in overcrowded brooders, that some chicks do not learn to eat as quickly as the others and run about and "cheep, cheep" most of the time or stay under the hover. Such chicks and any that for any other reason "go off their feed" may be benefited and often so strengthened that they will grow well to marketable size if removed from the flock, kept comfortable and given a chance to eat by themselves and taught to eat by tapping the feeding board or dropping the food before them in small bits.

Chicks that will eat, though seriously sick, may often be cured. Withhold all grain food for a period of two or three days and give several times a day the following: Thoroughly scald or bring to the boiling point good, sweet, whole milk; add to this a sufficient amount of thoroughly boiled white bread flour to give the milk the consistency of medium heavy cream. Do not get it too thick for the chicks to drink readily. Add a very small pinch of grated nutmeg and pure powdered ginger. Of the above preparation allow the little chicks all they will drink from three to six times daily. Do not leave this milk mixture before the chicks all the time, as they are

liable to get themselves messed up in it and so become wet and chilled. Usually in two or three days the little chicks will be ready to return gradually to the regular ration, but continue giving an occasional feeding daily of the prepared milk as directed.

When the little chicks paste up behind remove the accumulation of dung and bathe the parts with creolin and warm water. Do it as often as you find dropping caking on, about and below the vent. For this purpose use one-half teaspoonful of pure creolin in a pint of comfortably warm water. Dry the chick before you return it to the brood.

When returning them to the dry food ration it may be supplemented with thoroughly dried stale bread crumbs that have been barely moistened with warm, sweet milk, also with mashed boiled potatoes, boiled cracked rice, boiled wheat and a very little raw potato.

Selecting A Good Variety for Beginners

There is Good in all the Popular Varieties—Choose the One That Suits Your Fancy Best.

By W. P. Roberts

KNOWING that I have had many years of practical experience with poultry and in breeding both small and large flocks of more than fifteen different varieties, the Editor of American Poultry Journal has asked me what points of difference I have noted and how I would advise a beginner to choose a variety.

My advice to the beginner is practically the same as the Editor of A. P. J. has always given. Select one of the leading popular varieties that pleases you best and you can't go wrong. Every person has, or develops, some individual preference. Everybody does not always like the same thing, nor in the same way. What one loves dearly and finds good and beautiful, another person might not find likable at all. It is a mighty lucky thing that individual preferences differ, that some like one thing and some another, and that what one prizes highly another would not have as a gift. It would be nothing short of calamity if everybody liked and wanted the same thing and at the same time. Just imagine it!

No one can pick and choose for another and get the best results. You wouldn't expect or want another man to choose you a wife, select your home, or your occupation, or anything else in which you have decided personal preference, and, by the same token, you won't be satisfied with a breed or variety of fowls that someone else selects for you unless they happen to appeal to your particular liking. A man will do best and succeed best with a variety he likes and appreciates. Make your own selection. There is always an opportunity to change your mind and make another selection. You don't get married to one breed of fowls for life, not unless you want to, and many of our leading successful poultrymen have bred several varieties. Do your own choosing, for success comes that way.

In a recent number of A. P. J. I saw the suggestion that some one ought to tell the "defective points of breeds, varieties and even strains" and it was also said that breeders are apt to praise their favorites overmuch, presumably in an effort to promote popularity and make sales. In my opinion no variety won any particular popularity solely through boosting booms, advertising, and eulogy. To become popular a breed or variety has to possess real merit. The man who selects one of the leading popular varieties, as evidenced by the great number of persons breeding them, can't go far wrong in his selection. The merit has to be there or the fowl would not have become popular.

I haven't anything to sell and have no axe to grind. My specialty now is market poultry and eggs. I can make more money by sticking to my specialty and striving to fill an ever increasing demand than I could hope to make by breaking into the fancy. In the early days I used to show some good ones and enjoyed it, but it wasn't my end of the game. I have no use for mongrels and very little for crosses, and then only for first crosses for a special purpose. I keep only thoroughbreds and now largely "general-purpose" American class fowl. Do I believe one variety can be relied upon to produce both "eggs and meat"? I certainly do. I know it, because I get my living largely from "general-purpose" fowl.

"Egg Breeds."

When I started I bred Leghorns, White and Brown, for several years. I sold large quantities of white-shelled eggs in a brown-egg market, too. I found Leghorns easy to keep in small or large flocks with the minimum of house room. They were difficult to keep on the right side of the fence. Although non-sitters, it was not uncommon to have them broody in the chick season. Though rated as "egg machines," I did not find them to be extraordinary layers; I have had heavier birds that laid fully as well. As spring, summer and fall layers they did well for me, but I have had better winter layers. The eggs generally ran good in fertility and hatched well. The chicks were hardy and easy to raise. The eggs averaged just a bit too small to suit me, especially pullet eggs.

Leghorns are too small to be considered as market poultry, yet the chickens make good broilers and fryers and some broiler men find them quite satisfactory. As is the case in all breeds and varieties, the individuals vary in desirability and toothsomeness of the flesh. Some will stay tender after maturity and some won't. As a rule I found that I had to sell my Leghorns as market fowls at a lower price than that paid for heavier fowl. Mine were good foragers and rather heavy feeders for their size and as a rule carried considerable offal in proportion to their meat.

Some wonderfully fecund strains of Leghorns have been built up having a good proportion of heavy layers. The active little birds are good advertisers and generally get full credit for performance. That they have much merit is attested by the fact that a large number of commercial egg farms carry Leghorns exclusively, usually the White variety. As mine is an "egg and meat" farm I dropped them finally in favor of heavier varieties that afforded me better opportunity to make the most of my market.

Black Minorcas I tried for a time and then dropped them, largely because I personally do not like a black fowl. They proved good layers, good feeders, and quite hardy, much hardier than I had been led to believe. Mine were hardened by out-door life in an orchard and a house that was little more than an open shed. The only defect, aside from overlarge combs, that I could point out in this variety is that the females would apparently lay themselves out of condition and that disorders of the egg organs were frequent. With Black Langshans, the color was what caused me to drop them. They were hardy, good feeders and good layers. The young males made excellent capons. I won't weary the reader with a story of all the breeds I tried and discarded, but will go on to the "general-purpose" utility fowl of the American class.

American Varieties.

At one time or another I have probably had all of the American varieties. Barred Plymouth Rocks were my favorites for a time, but their tendency to put on internal fat when heavily fed and their dark pin feathers decided me to drop them. I found them fine layers all the year round and good foragers, a bit disposed to be greedy feeders, and always good table poultry. The Buffs I also found good, but the colored pin feather here also was an objection and the fact that with a utility flock the uniformity in color of the flock was apt to be lacking.

White Plymouth Rocks I still have, and I believe mine are pretty close to the original Plymouth Rock blood, for they now and then throw a Barred sport. I could not ask for better all the year around layers. I get a good yield of eggs in winter, spring and fall. In summer they lay best when they have abundant shade of a well-wooded range. They are good feeders but not gross feeders. They stand confinement and forced feeding well, but need abundant greens. In confinement they are apt to get the egg eating and feather pulling habit unless the supply of fresh green food is very liberal.

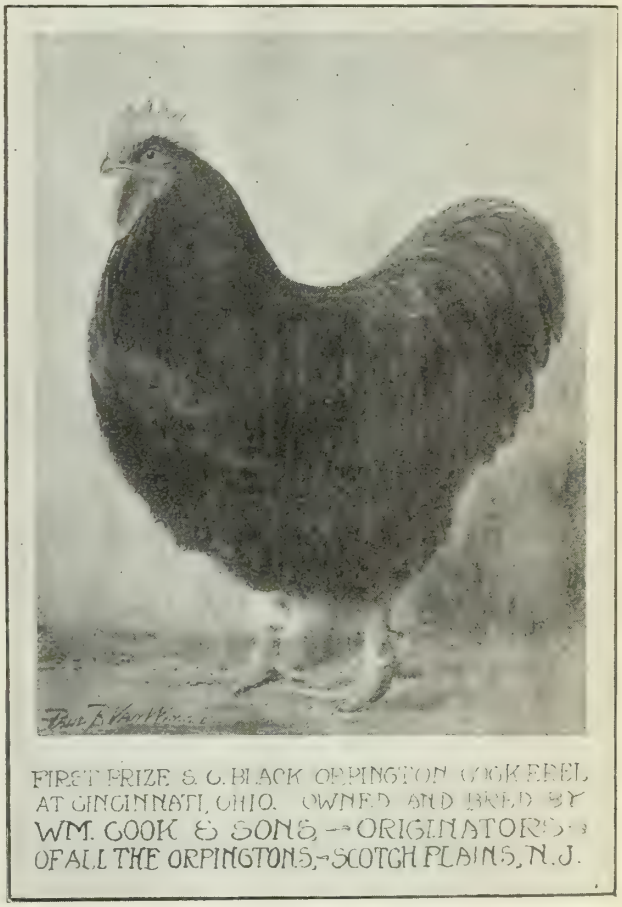
With White Rocks I can get 8 to 10 pound roasters at 24 weeks old and fine tender juicy flesh. I think I can get a little quicker and heavier growth with a first cross of Light Brahma male on White Rock females for roasting chickens. Do not keep the pullets of this cross for layers, but market them as roasters. When it comes to egg production I cannot see that the Leghorns have anything on the Rocks, but the latter don't make quite as much fuss about it and lay a big

brown egg. As the birds advance in laying the color of the egg is apt to run lighter.

So far as early maturity goes, I believe that is largely an individual characteristic and not a particular one of breed or variety. I don't want too early maturity. Prefer to have the birds make good full growth first and am satisfied if laying begins between six and seven months old. I find that Rock chickens generally grow all over and keep on growing if handled right. That is a good point, for it means that they are marketable at almost any age. The same is true of the Wyandottes, also favorites of mine. I have bred most of the varieties, but now stick to the White on account of the color chiefly. One of the best features of this variety is that the birds are always plump at all ages when well fed. Generally they lay a good sized brown egg, but it has a tendency to run smaller and lighter in color. With any fowl the size of the egg can only be kept up by skillful feeding.

Wyandottes are great foragers and if given a chance will wander far from the home coop. They are hardy and easy to rear. With purchased eggs I have had some difficulty in securing good fertility, but not so with home eggs. I haven't any fault to find with this variety, though as with all varieties the percentage of best quality market birds and good layers in the flock depends largely on the way they are developed. I have never yet found any real "egg type" and when it comes to meat excellence there is a wide variance with individuals in the same flock. I think I get greater uniformity in egg production combined with market excellence with Rocks and Wyandottes than with other varieties, but that is only my opinion.

As a hardy, easily reared egg breed I like the Rhode Island Reds. For broilers and small fryers the Reds have not done much for me, but they do well as larger chickens and make fine fowl. My Red chickens always seem to put all their energy into doing one thing and doing it well. When they grow frame they make a business of it; when they grow flesh they grow flesh and when they grow feathers they grow feathers. They seldom ever do all three at one time like the Wyandotte. I find the Reds a most desirable addition to a utility plant. When they get broody they are more persistent than the Rocks, but very little more disposed that way than the 'Dottes. It is as layers chiefly that I keep the Reds and they come in just about right as market fowl when the market demands live fowl at 20 to 25 cents a pound. They stand heavy feeding well and are not voracious eaters and seldom put on internal fat. Red pullets that weigh 5 pounds when put in the laying houses in the fall will usually sell as 6 pound fowl the next summer when the price is high. The big brown, very uniformly colored eggs are always in demand by my best trade.



Some folks make a great bugbear of broodiness and think they must have a non-sitting variety. Most of the talk along such lines is just talk. Any fowl you get will rest or loaf some of the time. If she happens to be a non-sitter you can't make her useful during the loafing period. Some of the best layers I have had, trap-nested, too, in some instances, were allowed to hatch and rear a brood and I believe laid all the better for it.

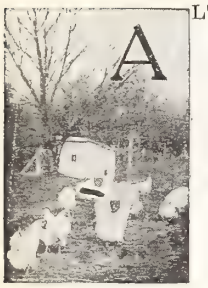
I generally can find a use for all the broody hens I get. If I don't want to set them or sell them to some one who does want to set them, it is easy to break them up. I simply put them in a slat bottomed coop, swinging, and supply only water for first two days, then one feed a day of oats. In less than a week they have forgotten about being broody and generally begin laying again.

Among the Asiatics, besides the Langshans, I have bred Cochins and still breed Light Brahmas. The old fashioned Buff Cochins I found to be excellent layers, especially in winter. They also made good market poultry. My Brahmas lay well and make fine winter roasting chickens. The eggs are large and brown. The fowls are very tame and require only low fences to confine them. I would not want to run my plant without them. For roasters I use them bred straight. Also am using the Brahma as the top of a Rock cross and the Brahma females with a Cornish male for roasting chickens. I only use the crosses for quick growth under forcing.

So, I can only repeat to the beginner: Do your own picking and choosing. Select the particular variety that pleases you best. There is good in all varieties and if your choice is one of the more popular sorts you can feel double assurance that you will not be disappointed. There are big breeds and little breeds, breeds that lay large and that lay small eggs; that lay white eggs and that lay brown eggs.. Almost any of them will satisfy you when used as home killed poultry on the table, if you eat them when the meat is ripe to eat and have it properly cooked. The best quality in table poultry is largely a matter of skill in feeding. Getting eggs is more in the man than in the breed. If you want market poultry you have to know how to produce it and it is the same with eggs. The same ration that will grow good chickens from three weeks up to maturity will make either eggs or meat when fed to older stock. It is not so much in the food as in how it is fed and how the flock is handled.

I haven't done much in the way of pointing out the "defective points in breeds" because in my experience most

The United Farms now own the Wm. Cook & Son Orpington plant.



of such points are common to all varieties. There is a good deal of variation among individuals in the same variety. I find considerable differences in individual type in each variety. This is not confined to utility stock. You have only to go to the next big show to see that type varies a whole lot in any one class. Uniformity in type is something we all are working for, but how to get it without inbreeding to the impairment of constitutional vigor and the loss of some other desirable qualities is a big question. The fruit of one season on the same tree will vary and you can only get the appearance of uniformity by constant culling.

Guess I have said most enough, but did anyone ever buy you a necktie of their own selection and devout belief that it suited your particular style of beauty? And did you feel obliged to wear that tie to avoid hurting her feelings, though you loathed the tie and longed to lose it? Many have had that experience. If you prefer to select your own ties, don't ask the editor of a poultry journal to select a variety of fowls that will suit you. You have to work with those fowls and to see them daily—he don't. Do your own choosing.

Poultryman's Practical Dispensatory

Chapter II—Lime: The Upbuilder, the Upholder—The Shell and Bone-Maker.

By J. H. Petherbridge

ALTHOUGH THE MISSION of these letters is to treat in a practical way of Drugs—their use and abuse in the poultry yard, I am giving precedence to certain elementary substances that it would be an injustice and misnomer to designate merely as "drugs." For they occupy a much higher plane, owing their medicinal value to the fact that every animal organism must exhibit these elements in certain fixed ratios in a state of health and any departure or variation from these proportions means a disturbance to the vital functions, with resulting ill-health.

It follows, therefore, that in the use of Iron, Sulphur, Potash, Lime, and other elements I may later take up, as remedies—we intelligently do so for the purpose only of restoring Nature's balance. While we may err in our diagnosis, and frequently do, we attribute certain diseases and conditions to either a lack or an excess of some important mineral constituent of the fowl's economy and by its administration or antidote endeavor to supply the lack or overcome the excess and restore as far as possible conditions of normal and healthy action.

It is highly essential for us to know the importance of the minerals involved in the fowl's organism, their economical sources of supply, and be able, in a measure, to recognize and interpret the distress signal that an abnormal condition invariably flies. True it is that the well bred fowl with unlimited range and natural environment finds and appropriates without direction of ours, all those mineral elements that it stands in need of, but in these "shut-in" and "intensive poultry culture" latter days, hundreds of thousands of our birds are handicapped (or rather footbound) and entirely dependent upon our discernment and knowledge with but little opportunity to exercise their instincts.

Although but 5 per cent of the body weight of the fowl consists of mineral matter, this seemingly small percentage has most important functions to perform in the upbuilding and support of the bony structure and in the regulation of the density of the blood and digestive fluids of the stomach and intestines. The main source of supply of this mineral matter lies in the grain, the mash and the greens we feed them, but in addition to this organic mineral matter, a certain amount of inorganic is required for the formation of the egg shell and the proper development of the frame in the immature bird. In most situations this must of necessity be an artificial supply and as the mineral most in demand is lime, crushed shells, grit and ground bone may be our main reliance. It is asserted that one pound of oyster shells contains sufficient lime for the shells of seven dozen eggs.

I do not feel that I need apologize for including in this informal discussion of remedies brief reference and suggestion of other uses than as medicines for these indispensable minerals and their compounds. It has been my observation that it is the little, simple, generally known information, omitted because assumed to be known by all, that some reader stands in need of, and the writer who really aids one reader has accomplished more than in only entertaining or amusing the large majority who "know it already." It sometimes happens, though, referring to this majority of as well or even better informed readers, that they "are most ignorant of what they're most assured."

Calcium Carbonate is the most abundant and widely distributed calcium salt in Nature. Familiar to us in the form of limestone, shells and chalk. The subjection of limestone and shells to intense heat, drives off the carbonic acid and gives us an oxide, the lime of commerce, or as familiarly known, "quick lime."

The value of crushed shells kept in a hopper before the flock is mainly to supply the females with shell-making material for which purpose nothing can be cheaper or better. As a mechanical aid to digestion, crushed shell also fills some of the functions of grit, but as a bone builder, I am disposed to think shells have but little influence, there being in bone less than 4 per cent of the carbonate to 57 per cent of the phosphate of lime.

Chalk is a native friable carbonate of lime and the world's supply comes largely from the chalk cliffs and beds of England, France and the United States. There is one pharmaceutical product of chalk I can recommend for the poultry troubled with diarrhoea accompanied by acidity. Freshly prepared by the druggist, a teaspoonful of "Chalk Mixture" poured down the throat of the ailing bird at intervals of two or three hours should remedy the condition in a day's treatment unless there happen to be other more serious complications.

Quick Lime is soluble in about 700 parts of cold water. A little water sprinkled on lime is rapidly absorbed, with the evolution of much heat and vapor. This constitutes the phenomenon of "slaking," the first step in "whitewash" preparation. And allow me to interlope, if you should have a bird you believe is suffering from diptheritic roup, and you haven't killed it because it cost you good money, hold it head downward for a few seconds over the heat and vapor of some "slaking" lime; do this several times at intervals long enough for the sufferer to get a breath of fresh air in its lungs and you may effect a gratifying "cure." For use, however, as a disinfectant, purifier and for the soil, lime is better "slaked" without the addition of water, by simply exposing it to the atmosphere, and this we know as air-slaked lime. The addition of one or two handfuls of air-slaked lime to the sifted coal ashes many use on dropping board and in dusting box, will destroy all offensive odor and materially aid in routing body lice. The lime should be sifted and the lumps discarded for these may be unslaked and if eaten by the chickens will do serious damage to the digestion. In event that any of your birds give evidence of bronchial trouble cease using the lime for a time, as lime dust is extremely irritating to the air passages.

There is no more effective soil-sweetener or disintegrater of heavy clay soils than air-slaked lime. Before spading or plowing up poultry yards that have become foul by long usage and lack of growing vegetation or infected by a visitation of a contagious disease, give the yard a heavy top dressing of air-slaked lime and turn under; let rest for a few weeks with several stirrings up with harrow or rake and grow a green crop upon it before again using it as a run.

Lime Water.—Two ounces of quick lime, slaked with 4 ounces of water in a gallon bottle, agitate frequently for an hour with the addition of a half gallon of water, allow to settle and pour off this water. Then again fill up the bottle with fresh cold water and again agitate; cork tightly and set aside until use arises for it. Lime water is a valuable antacid and astringent and the clear solution in the bottle may be given full strength to the poultry in one of their fountains (but not metal ones) for the same purpose for which I recommended chalk mixture.

For quick relief to a burn, mix lime water and linseed oil, half and half, and apply freely to the burned surface.

Sulphate of Lime.—The combination of lime native in the different varieties of gypsum rock, hence the common name of gypsum for the crushed and ground crude, impure sulphate. It is also designated as land plaster. It has no medicinal use as an internal remedy, but is utilized by poultrymen as a deodorizer and absorbent under the roosts. Valuable to the agriculturist as a fertilizer—either alone or in combination with other chemicals, indispensable to the mechanic in many diverse employments, sulphate of lime is worthy of more extended notice.

Phosphate of Lime is the principal mineral content of

bones. Burned to a white ash, the residue shows over 57 per cent of phosphate of lime, and it is from this source we obtain phosphorus and all its compounds directly or indirectly. To furnish our flocks or individual birds, therefore, with the phosphate of lime, absolutely essential to the formation, growth and maintenance of their bodily structure and proper nutrition, I believe we need look no further than this original source of all other compounds of phosphoric acid and lime.

The precipitated phosphate of the drug store, the hypophosphite, the lactophosphate and the phosphide of lime, all have their distinctive application to the needs of human organisms, but they offer no remedial or constructive elements to our birds that a good quality of bone-ash, bone-meal and granulated bone does not afford at one-tenth the cost. And the highly important score of economy must never be lost sight of in our selection of remedial agents for domestic animals we "raise" for profit.

Bone-ash is the mineral residue of burned bones, the heat destroying all animal matter and driving off the carbon.

Bone-meal is the dried ground bone, varying in fineness from flour to the granulated and retains all the animal matter.

It therefore follows that whereas bone-ash offers the greater proportion of the phosphate, it lacks the food value of the meal and granulated bone.

Leg Weakness in chicks and growing stock. While there may be and in most cases are contributing factors, such as too warm floors in the brooder, imperfect ventilation, too close confinement, lack of exercise and overcrowding, the underlying cause of leg weakness is feeding a ration too rich in fat and flesh forming constituents and too poor in ash and bone-making material. The chicks gain in weight faster than they acquire strength.

The amount of corn and corn products should be lessened materially or for a time discontinued. Every mash fed, whether dry or moist, should contain the best quality of bone-meal you can procure to the amount of 2 pounds in a 25-lb. lot. And I would further recommend that in addition the individual hoppers of grit, charcoal and shell you add one for granulated dried bone. (I do not advocate green cut bone or blood-meal for immature stock.)

Chlorinated Lime (Chloride of Lime—Bleeching powder).—I presume there is not a reader but knows the familiar one-fourth, one-half and one-pound pasteboard or metal boxes in which this valuable disinfectant, deodorizer and germicide is offered for sale, but it may not have occurred to some why it is not sold in bulk. Owing to the readiness with which it parts with the chlorine upon exposure to the air, it rapidly deteriorates if kept in other than sealed containers. The value of chloride of lime, for the purposes named, depends upon the chlorine gas content. It is said that chlorine if present in the atmosphere in even the small proportion of 1 to 100 is able to destroy all disease germs, provided the air and the objects or substances to be disinfected are moist and the room tightly closed for a time. This offers a convenient and cheap method of disinfecting poultry houses that can be closely closed, involving less labor than usually called for in the use of other agents. Particularly so, if your water supply permits the services of a hose to thoroughly wash down all the interior.

Ridding the house of the excess water, but while everything is still damp and the air moist, sprinkle chloride of lime around liberally and close up house tightly for several hours. Then open up, sweep out the lime and allow the sunshine and air to complete the job.

Open boxes of chloride of lime should not be permitted to stand around the poultry house for deodorizing purposes; it soon becomes valueless for this purpose but always remains a menace to your birds in that, taken internally, it is a corrosive poison.

Calcium Sulphide (Sulphuretted Lime.)—A combination of lime and sulphur that is highly recommended for the treatment of canker, diptheritic conditions, chicken-pox and sore-head. As a local application for pus formation, canker and diptheria, it is applied directly but sparingly to the diseased membrane by means of a glass or metal tube.

Upon the first indication of an outbreak of chicken-pox in your flock (and its appearance upon one cockerel or cock is sufficient indication, even if you isolate him immediately) the "American Poultry Doctor" advises the thorough mixing in the moist mash, once a day, of 1 grain to each adult bird and the treatment kept up for a week. Half grown birds, ½ grain. The application to the sores of any good coal tar ointment and a thorough cleaning up and disinfection of the premises, with a material reduction in the amount of "meat" fed while under treatment, in addition to the calcium sulphide, is said to control and cure this nasty and far too prevalent disease.

Calcium sulphide may be purchased through your druggist in one or four oz. bottles, the latter package retailing for about 50c. If the top portion in the bottle shows a lighter color, throw this part away, for it is probably inert.

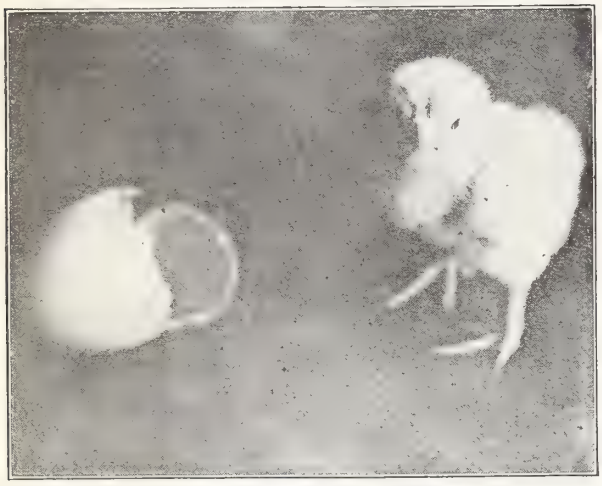
Should you have no small scale upon which to weigh out the required number of grains, counting a grain for each bird, ask the druggist to place a daily portion in each of seven small vials, tightly corked. The additional cost is justified by the accuracy and activity assured. Much of the calcium sulphide on retail drug shelves is inert and value-

FIRST PRIZE COCKEREL MADISON SQ. GARDEN, DEC. 1913
BRED AND OWNED BY F.W. CALMY, TIVERTON 4 CORNERS, R.I.

less, because in stock too long or too often exposed to the air. Buy it only in the original container and insist upon a fresh article. Don't mix it with the mash until feeding time and if they leave any portion of the mash uneaten, remove and throw it away.

Though this chapter has reached an undue length without even reference to many interesting and invaluable salts of lime, as for instance the carbide, upon which we are dependent for acetylene gas and the bisulphite without which the paper manufacturers would be at a loss and the subscription price of the A. P. J. would have to be advanced, I have no right to close without at least "honorable mention" to a lime product with which many poultry plants should be more intimately acquainted, **Calcium Hydrate.**

Whitewash offers an incentive to early rising, late retiring and encourages contentment. A dark, dismal, dirty house, renovated and then adorned with the hydrate of lime will cause the hens to sing:



"Now is the Winter of our discontent
Made glorious Summer by this Son of Lime."

Improving and Increasing Egg Production

A Quarter of a Million Roosters Marketed on Missouri "Rooster Day"—Artificial Fertilization of Eggs—High Water Mark Reached in May Egg Laying Contest

THE "ROOSTER" has been "Swatted." Over 250,000 male birds were marketed in Missouri on "Rooster Day," Saturday, June 6th, and during the few days which preceded this. Practically all of the 1,500 buyers and wholesale dealers in eggs in Missouri co-operated with us in this movement, and from reports received from them thus far, it is safe to say that a quarter of a million males were marketed by Missouri farmers during "Rooster Week." The production of infertile eggs will mean the prevention of a loss of from $1,000,000 to $3,000,000 this season in Missouri alone. This movement also will result in the improvement of the quality of the poultry as most of these farmers will replace their scrub males with pure bred males. It will also result in the improvement of the cleanliness of the egg, the method of handling, and the improvement of the quality in general. The fact that farmers show enough interest in the quality of the eggs they market to dispose of their surplus males and market infertile eggs shows that they are making progress and taking some interest, and there will be a general improvement in the poultry business along all lines in this state as a result. The object in "Swatting the Rooster" is not to keep bacteria out of the egg as some seem to imagine, but to prevent chick development in fertile eggs. Before the eggs pass through the hands of the farmer, the country store, the local dealer, the wholesale jobber and the retailer, and by the time they reach the consumer, there has been considerable delay. An egg does not have to be in an incubator for the embryo to grow and develop, but chick development takes place in a hot country store or a living room or on a hot country road, on the road to market, or in any place or under any circumstances where the temperature is as high as it is on most hot summer days. By eliminating the fertility, we prevent chick development which causes our greatest loss in summer months. I have some eggs on my desk which are over a year old. They have never decayed. The contents simply dried up. "Swat the Rooster" by all means if you have not already done so. Confine him if you wish to carry him over for breeding purposes another season.

A chick at the Missouri State Poultry Experiment Station which was hatched from an egg which was artificially fertilized, artificially incubated, artificially hatched and artificially brooded. The mother of this chick was never allowed to come in contact with a male.

Artificial Fertilization.

We have been making some experiments along this line and have some living chicks hatched from eggs laid by hens which have never been allowed to run or come in contact with, or be treaded by a male bird. From what experiments we have made, I believe we can collect the semen from the champion Barred Plymouth Rock male bird at New York, Madison Square Garden Show, carry it to Missouri and then fertilize eggs from the champion pullet at the Missouri State Show if that pullet is in laying condition. Artificial fertilization of eggs may never be practical, but we learn other things as a result of work of this kind. We have been surprised to learn the length of time the male germs will live out of the body of either the male or female. We have allowed the semen to become perfectly dry, and then after two hours or more moisten it and find hundreds of them still living and moving over the field under the microscope. Our experience has led us to believe that about 5 per cent of the males used for breeding purposes are practically sterile—that is, that their germs are so weak that they do not fertilize or else the semen is lacking in male germs. We have living chicks hatched from eggs artificially fertilized, artificially hatched and artificially brooded. Some interesting facts are being developed with reference to this work, and mention will be made of them in later reports.

Facts About Egg Formation.

For some time our Pathological Department has been observing abnormal eggs and facts as to their cause, significance, etc.

36 abnormally small eggs were recently examined.
25 contained yolk or some part of yolk.
5 contained blood clots.
3 contained particles of chalazea.
1 contained a hard lump of albumen.
1 a normal yolk.
1 contained a ruptured yolk and no albumen.

The small eggs were laid in the regular course of laying, the greater number of the hens laying the day before, and the day after, two laying the same day. The common idea is that when a hen lays an abnormally small egg that the hen has laid her clutch and is going broody or else it was the first egg laid by a pullet. This idea is incorrect, for as a rule the hens which lay small eggs lay regularly both before and after laying the small eggs. The facts are that any object getting into the funnel of the oviduct will stimulate the oviduct action so that it is moved down the oviduct, causing the albumen and shell to be placed around it. In certain yards at this Experiment Station, on April 28, 1914, 1,068 eggs were laid. On the night of April 28th there were 27 soft-shelled eggs laid, or an average of about one egg to 40 hens in these same pens. Of the 18 hens which we know positively laid soft-shelled eggs, 12 of them laid on that date, the day before and the day after, showing that the soft-shelled egg is laid in the regular course of laying, between hard-shelled eggs. With regard to the soft-shelled eggs, there are many theories advanced, such as the lack of egg shell forming material, over-exertion on the part of the hen or of her egg organs, inflammation of oviduct, etc. The tests made here indicate that a lack of shell-forming material, such as shell, grit, etc., is not always the cause of soft-shelled eggs. They may have imperfect shells, but a lack of material will not produce a soft-shelled egg one day and a hard-shelled egg the day before and the day after. It is interesting to note that principally during the day is nature's time for the movement of the egg through the oviduct, and at night the egg rests and receives the shell in the shell-forming section. For this reason, the soft-shelled eggs are laid in the fore part of the night, and the harder-shelled ones later in the night. The records of the 24 double-yolk eggs were kept. Six of the hens did not lay the day before, but laid the day after; eight of the hens laid the day before, but did not lay the day after; nine of the hens laid the day before and the day after; one hen laid only one egg during the month. Some of the double yolks were contained in one chalazea, while some of them

were in separate chalazea. In eight large eggs containing two yolks which were examined, six eggs contained yolks which were the same size. In two, one yolk was smaller than the other. In three, the yolks were in the same chalazea. One of the largest hens in the contest is a Plymouth Rock and weighs 8½ pounds, and has laid 12 eggs, or not quite 1½ eggs to every pound of her body weight. One of the smallest hens in the contest is a Campine and weighs 1½ pounds, and has laid 103 eggs, or nearly 70 eggs to every pound of her body weight.

Contest Report for May.

The hens reached the high-water mark in May, laying 20,418 eggs during the month, or an average of about 20 eggs per hen. The grand total for six months is 90,149 eggs, or an average of 87 eggs for good and bad. In other words, the pure-bred hens in this contest, coming from all parts of the world, have averaged 15 eggs more in six months than the average farm hen lays in a year. The highest pen average has been made by the English White Leghorns, 133 eggs per hen. The highest average made by a single variety, all pens competing, has been made by Buff Orpingtons, averaging about 100 eggs per hen. The other varieties run from 80 to 100 eggs per hen on the average. The English S. C. White Leghorns again broke the record for May by laying exactly the same number of eggs they laid in March—257 for the month.

Three hens laid every day in May. One was an English White Leghorn, No. 02, owned by Tom Barron. Another was a Barred Plymouth Rock, No. 592, owned by B. F. W. Thorpe, of Ohio. The third was a S. C. White Leghorn, No. 1009, owned by the Linfield Poultry Farm, from New Zealand. Each laid 31 eggs in 31 consecutive days. The Barred Rocks made quite an increase in production in May; so did both the S. C. and R. C. Black Minorcas. Other varieties also did well, and in fact practically all those which

Third Cock, Chicago Coliseum Show, December, 1913. Bred and owned by Flanders' White Leghorn Farm, Orchard Lake, Mich.

have been slow to get started are now making up for lost time. A few hens have never laid an egg.

The best pen record made thus far by representatives from the various countries is as follows;

S. C. White Leghorns made best English record	1,330 eggs
S. C. Reds made best United States record	1,152 eggs
S. C. Reds made best Missouri record	1,152 eggs
S. C. White Leg. made best Vancouver Is. record	980 eggs
White Wyandottes made best Ontario, Can., record	949 eggs
S. C. White Leg. made best New Zealand record	942 eggs
S. C. White Leg. made best Brit. Columbia record	904 eggs
S. C. White Leghorns made best Australian record	844 eggs
S. C. White Leg. made best South African record	797 eggs

In the contest just closed in New Zealand, the leading pen of six pullets averaged 278 eggs each. We have some birds in this contest from some of the New Zealand winning pens. They were not larger than fryers when they arrived here and of course have had no chance yet to show what they will really do in this country. In New Zealand and Australia they do not use trapnests, as I understand it, and it is only the pen record that they get. If a pen averages 278 eggs, there must be several hens in the pen which laid nearly 300 eggs, and perhaps some more than that. I really believe we can avoid the excitement and handling and get

One of the many prize-winning Black Orpingtons owned by J. H. Wendler, Lakeland, Fla.

a few more eggs from pens where they are not trapnested. But you cannot determine the good and bad individuals without the trapnest.

The varieties in this contest rank as below, and the best pen record made by each pen of ten hens for the first six months is as follows:

Pen 0—Foreign S. C. White Leghorns, England	1,330 eggs
Pen 47—S. C. R. I. Reds, Missouri	1,152 eggs
Pen 79—American S. C. White Leghorns, Pa	1,094 eggs
Pen 18—White Wyandottes, Pennsylvania	1,089 eggs
Pen 53—Barred Plymouth Rocks, Illinois	1,062 eggs
Pen 38—White Orpingtons, Pennsylvania	1,054 eggs
Pen 51—White Plymouth Rocks, Arkansas	1,031 eggs
Pen 5—Anconas, Missouri	1,028 eggs
Pen 4—S. C. Buff Leghorns, Michigan	1,025 eggs
Pen 32—Buff Orpingtons, Missouri	1,014 eggs
Pen 45—R. C. Reds, Missouri	1,011 eggs
Pen 13—Campines, New Jersey	959 eggs
Pen 48—S. C. Black Minorcas, Missouri	950 eggs
Pen 23—Silver Wyandottes, Missouri	948 eggs
Pen 55—Buff Plymouth Rocks, Pennsylvania	936 eggs
Pen 22—Buff Wyandottes, Missouri	935 eggs
Pen 35—Black Langshans, Missouri	900 eggs
Pen 37—Black Orpingtons, Missouri	891 eggs
Pen 14—Rhinelanders, California	865 eggs
Pen 42—R. C. Black Minorcas, Missouri	715 eggs

Womans Success With Poultry

Helen F. Woods, Editor

A Department for the Exchange of Helpful Poultry Experiences

NOVEL UNIFORM OF POULTRY WOMAN

AS A RULE, a woman who keeps poultry dresses after the manner of womankind in general, but probably there never was a woman engaged in poultry work who has not at one time or another regretted her inability to discard cumbersome skirts while about her work.

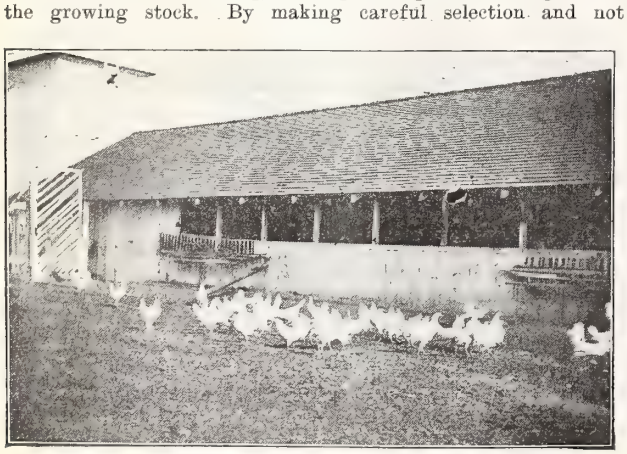
Mrs. A. I. Cruzon, a woman of sixty, who keeps a flock of more than a thousand layers, has laid all convention aside and dresses in clothing convenient and suitable for her work. Although located near a city of about ten thousand inhabitants, with neighbors on all sides, she has not consulted public opinion in the matter but planned her uniform to give freedom of action and comfort.

She wears the regulation soft shirt, flannel or light weight material as the weather demands, with khaki bloomers in place of the usual skirt. These, together with a large straw hat and a pair of high-top lace shoes are worn at all times, while at work about the poultry.

Mrs. Cruzon's husband is an invalid and unable to assist her about the farm, but she needs no assistance, for she climbs a ladder or crawls through a small opening just as readily as could a man.

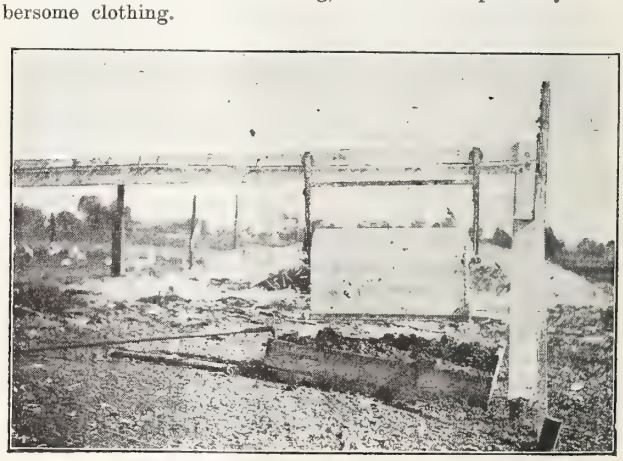
Mrs. Cruzon uses open-front houses exclusively, the north side of house being boarded part way up as shown in the illustration, with the rest of the opening covered only with wire netting. The houses are open to the north because all of the heavy winds and storms in her vicinity come from the south.

The roosts are arranged above a dropping board about three feet from the floor and along its edge is built a steel track on which is run a litter carrier into which the droppings are scraped. The track runs out the end of the house, where the droppings are dumped into a sled or cart and hauled to the fields.



Mrs. Cruzon uses a variety of grains, ground and whole, and during the greater part of the year gives a mash once daily. Self feeders are used for dry mash and whole grains. Green stuffs are provided plentifully the year round, consisting of kale, alfalfa and mustard, all of which are grown on the home ranch and prepared for feeding by running them through a small hand cutter. Beets are also grown to some extent for winter feeding, the tops being fed while green to the growing stock. By making careful selection and not taking too many leaves from the growing plants, the growth is not interfered with. These leaves when run through the cutter make ideal green stuff for growing chicks.

Mrs. Cruzon keeps careful records of her receipts and expenditures and figures that she gets something like fifty dollars a month for labor, besides a good part of her living expense. She has made a study of her business and aims to anticipate the wants and needs of her birds. She raises White Leghorns exclusively, being near the San Francisco market, which prefers the white shelled egg.



"A POULTRY WOMAN'S CONVENIENT DRESS."

A good share of the success of this farm is attributed by its owner to the fact that she is dressed for her work, and thus, no matter what the undertaking, she is unhampered by cumbersome clothing.

"OPEN FRONT HOUSES ARE USED EXCLUSIVELY."

"A LITTER CARRIER MAKES CLEANING EASY."

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

"Home Rule" for Transformed Branches.

THE lengthy report of the committee appointed to revise and codify the constitution and laws of the American Poultry Association is now in the hands of members and will be acted upon at the annual meeting in August. The report is certainly "worthy of a thought" for the members of the committee are men of experience in organization work and the majority of them have had abundant active work in the A. P. A. to make them familiar with the needs of the association.

As a whole it appears to be a practical and workable constitution and laws adapted from other organization rules and made to fit the peculiar needs of the A. P. A. Extended comment will be found elsewhere on certain sections and we believe would be better for further consideration and amendment.

Apparently the committee could not find any practical way to get rid of the $10 life membership incubus with which the association was saddled in the early days. It would be difficult to find a satisfactory way to provide for annual dues, and a better balanced life-membership fee, in an organization where the paid up life members now are reckoned in thousands. It is evident that the A. P. A. is likely to continue to depend for its revenue upon new life memberships and the sale of revised Standards and other copyright works. We believe that a national organization is seriously handicapped in its field of usefulness when it must depend largely on publishing and selling copyrighted works in order to get money enough to live on.

There ought to be a way to reach out and help everybody interested in poultry without making it so palpably a commercial proposition, operated for profit of the organization and to provide jobs for a few. Both fancy and market standards ought to be broadcasted throughout the country to build up better poultry and insure more of it. Effort should be made to interest outsiders in poultry keeping, and, once having secured their interest, every effort should be made to help them to succeed and to retain their interest. Continual demands for the loosening of purse strings of prospective breeders or fanciers is not conducive toward insuring permanent and healthful interest. Methods that are well enough in a big business are not so desirable in a big, and supposedly helpful, national association.

The criticism is frequently made, and not without just cause, that the poultry interests are built up largely upon extravagant claims of extraordinary profits. That every known means is used to get people into the poultry business, the lure of big profits is always dangled like bait before the beginner but he seldom gets any information as to the real facts. That every effort is made to get the beginner to buy Standard-bred fowls, but once he parts with his money little effort is made to show him how to make the best of his venture and keep the stock purchased from deteriorating. There appears to be a great deal of booming and boosting of the extraordinary virtues of breeds and varieties, but very little interchange of helpful experience and knowledge of how to make good with Standard-bred stock.

Commercialism is rampant throughout the poultry world. Everybody has something to sell including the national organization, but few have helpful advice to offer that is not jammed full of advertising lure to draw more business and more shekels from the would-be poultry keeper.

What we need is more real facts and truths about poultry, more helpful information how to improve and standardize both fancy and market poultry and how to succeed in the various branches of poultry culture. Here is a field where the A. P. A. might shine brightly as a disseminator of helpful, truthful poultry information, divorced from boosting and advertising of somebody's world wonders. Free bulletins, free information, ten, twenty-five and fifty cent standard books that sell for ten, twenty-five and fifty cents, and not fifty cent books that sell for two dollars.

There ought to be room, and there certainly is need, for a really national, helpful, lend-a-hand poultry association and it ought to be the A. P. A. The annual meetings ought to give more time to institute work and interchange of ideas and experience instead of wasting so much time in "business" sessions that are full of "hot-air" debates, personal advertising, and laboring mountains that bring forth mice. It may be that the proposed constitution will help to bring about the changes needed, but it doesn't appear on the surface. One of the most encouraging things, and what is apparently a step in the right direction, is the provision for transformation of the branch into State and Provincial organizations with "home rule." Provision is made for practical representation of such organizations in the national body in proportion to size. The State and Provincial organizations are independent in a practical way, fix their own dues so that they may be self supporting and act with the A. P. A. in accordance with their strength of membership. With efficient co-operation on the part of the A. P. A. such State and Provincial organizations should be capable of doing great good work and their power will be in proportion to the interest they create and maintain. With organizers of the right sort and sufficiently broad minded officers the proposed State and Provincial organizations can be made a great power

for good. The difficulty will come in amalgamating existing organizations into the transformed branch and in the doing away with local jealousies and carpet-bag politics. Let's hope that this may be the beginning of better things. Below is the text of the constitution as it applies to membership and the transformed branches:

"ARTICLE I.

"Members of Association.

"Section 4. The members of this association shall consist of three classes, as follows:

"(a) Individual Life.—Individual membership shall be for life, and shall entitle the member to a voice and vote in meetings of the association which he attends in person, and to a vote in the elections by mail; and shall be the first qualification for eligibility to act as a representative of an Associate or State or Provincial member.

"(b) Associate.—Any local poultry association, specialty club, or society organized in the interests of poultry culture may become a member of this association, if approved by the Executive Board, and shall be entitled to one representative at meetings of this association, and to one vote in all elections by mail. An Associate Membership shall be for such period as the member shall continue to exercise the privileges of this form of membership. The representative of an associate member must be an individual life member.

"(c) State and Provincial.—Any State or Provincial organization of poultrymen may become a member of this association by giving the Executive Board satisfactory assurance of its purpose, while maintaining its independence within its own jurisdiction to co-operate with this association in the development of its general policies. Each association so federating with the American Poultry Association shall be entitled to one representative to each one hundred members, or major fraction thereof of the State or Provincial association. No representatives shall be permitted to cast more than one vote. Only life members of the American Poultry Association shall be eligible to serve as representatives of State and Provincial members. Only one State or Provincial member shall be admitted to membership from each State or Province.

"The President of a State or Provincial member, if a life member of the American Poultry Association, shall ex officio be a member of the Executive Board. In case the President of a State or Provincial member is not a life member of this association, the State or Provincial organization may delegate one of its members who is duly qualified to represent it on the Executive Board."

Narrow Law for "Helpful" Association.

IN the proposed new laws of The American Poultry Association, Article XIV, we find the following:

"Section 103. It shall appoint from among its members a sub-committee of three on Certificates, Diplomas, and Medals, and arrange to supply these awards of merit to associate members for the encouragement of exhibitors at poultry shows; such certificates, diplomas, and medals to be competed for by individual life members of the Association only, and gold and silver medals to be given annually at the show of the Associate member in each State or Province which secured the largest number of individual life members for the American Poultry Association up to October last in each year. No certificate, diploma or medal offered by this Association shall be given except when awards are made by a judge licensed by the Association, and at this official American Poultry Association Show the Association premium ribbons must be used."

Isn't that a very narrow "Law" for a supposedly helpful association which advertises that: "On its shoulders rest this gigantic Billion-Dollar Industry"? What is the good of an organization that rules by law that its prizes can only be competed for by individual life members? Is that the right way to enter upon a broad field of helpfulness and usefulness? Why not give the prizes to the best specimens, regardless of whether the exhibitor is a life member of the A. P. A. or not? Wouldn't the winning of an A. P. A. special prize by a non-member be likely to inspire him with the desire to become a member of an association broad enough to award prizes for merit in a specimen without any strings on the award?

Better amend that section to read—such certificates, diplomas and medals to be competed for by ANY reputable exhibitor. Open American Poultry Association prizes to be the competition of all persons who are interested in breeding, growing and exhibiting Standard-bred poultry. Leave the membership string out of it and trust that the spirit of good fanciership, inspired by a broad-minded management of a really helpful association in a broad field of usefulness, will lead that prize winner to seek membership in the association.

We would also strike out the requirement that the awards must be placed by an A. P. A. licensed judge and that A. P. A. ribbons must be used. The show secretary and management are the ones who decide on the judges and where to buy ribbons. Why penalize the exhibitor and bar him from winning a deserved A. P. A. special prize simply because the show

management exercised its best judgment in the selection of judges and bought its ribbons of some dealer other than the A. P. A.?

A. P. A. prizes ought to be given for the purpose of "encouragement of exhibitors at poultry shows" as the law proposes and then proceeds to defeat its own object by puerile and narrow restrictions. Give the prizes to the most meritorious specimens and make the only requirement one of real Standard-bred excellence. Why not try to get away from narrow methods and the "I am holier than thou" attitude in which the mantle of holiness is conferred because of membership in the national organization? The greatest good for the greatest number ought to be the object of the A. P. A. if it really desires to be truly helpful and to become a truly national organization.

It is all nonsense to prate of the "Billion-Dollar Industry" resting on the shoulders of the A. P. A. It does not and never did. The statistics, from which the estimated "Billion-Dollar Poultry Industry" has been presumed, consider chiefly eggs and poultry (meat and eggs) in market channels and on farms. Of the 6,000 or more A. P. A. members comparatively few have any noteworthy representation in the statistics and there are vast multitudes of poultry keepers outside the association (who know next to nothing about it, or its objects) who have more to do with the makeup of the "Billion-dollar Industry." Instead of swelling up like a big frog in a small puddle and imagining that it controls the world, which to the frog is confined to the puddle, why not make some real effort to get out into the great nation-wide field and to help and interest all poultrymen. Don't build a spite fence about the A. P. A. puddle and charge admission. Extend interest, promote helpful poultry work everywhere, provide rewards of merit for every earnest poultryman in the nation, inspire poultrymen, and particularly members, with the desire to help, befriend and encourage all other poultry keepers. Don't try to commercialize the association to any greater extent than is absolutely necessary to keep it working, and useful and helpful. There will be no lack of members and seekers after membership in a truly-helpful, really-national organization that is working always for the best interests of all poultrymen of all-America.

Without further comment on Section 103, Article XIV, of the proposed laws, we quote herewith the remarks of Editor W. B. Atherton, in *American Fancier*, on the subject. Mr. Atherton is one of the most competent big show secretaries in this country and he speaks with authority as well as some feeling. Something over a year ago he pointed out to us, and was ably backed by a judge in good standing, the unfortunate fact that special prizes not infrequently go to inferior specimens simply because the owners of better birds do not belong to the association offering the special. Section 103 would foster the continuance of such undesirable conditions. "Encouragement of exhibitors" can only be accomplished by making competition open to all breeders and fanciers. Herewith is Editor Atherton's comment on Section 103:

"Of all the silly, idiotic propositions yet put upon the old A. P. A., this is the limit. It is the same old game of the almighty dollar before the hen to fill the coffers of the treasury so as to pay committees $5 per and expenses, and other things. The great (?) national organization that is supposed to benefit the poultry industry of America proposes to confine its prizes to members, thereby making exhibitors come in at $10 per.

"But the greatest tomfoolery is the proposition that these prizes must be awarded by a licensed judge and A. P. A. ribbons used.

"That's enough to make a cat laugh. Imagine an exhibitor at the Podunk show that fell for such a proposition advertising that he won one of these specials under a licensed judge and upon looking up the judge find him to be someone never heard of but who turned out to be a pigeon man who held a license to judge poultry as was shown to be the case last year.

"The A. P. A. has gone into the ribbon business, now they better take up roup cures and indigestion tablets. The people of this country have had about all the dictatorship that they will stand for as some of the moguls of finance are beginning to realize and the A. P. A. better go a little slow in this matter or they will find themselves more unpopular than a certain other A. P. A. did some years ago.

"If this thing passes the fanciers of the country may take it upon themselves to form an organization that will handle things for the benefit of the hen and let the almighty dollar take a back seat."

Poultry Ideas, owned and published by the Blair-Young Publishing Co., of Louisville, Ky., has consolidated with the "old" Industrious Hen, published in Knoxville, Tenn., for the past eleven years. The combined papers are now published as one under the name of The Industrious Hen, at Louisville, the new location being in the center of the field the circulations of both papers cover.

Hot Weather—Safety First.

DURING the hot weather bear in mind that popular present day slogan: "Safety First." It is better to be safe than sorry and prevention is far better than cures. Practice "safety first" by making your fowls comfortable in hot weather.

Keep the poultry houses wide open. Take out the windows. Don't fret about drafts. With open-air comfort drafts are not dangerous.

Provide plenty of shade and cool shelters. If the shelter is so made that it will afford protection against sudden showers, so much the better. Old canvas "pup tents," board shelters and lean-tos of evergreens all help. Don't summer hens in sun-baked yards. If possible, get them out into an orchard or grove and let them roost in the trees. Keep the yards seeded down to quick growing greens. Corn, if protected until well started, makes good summer shade.

Feed plenty of fresh raw succulent greens. See that the fountains are kept filled with cool drinking water and that they are placed in a shady spot.

Be careful that all food is sound and sweet. Spoiled food is dangerous and poisonous. Much of the "mysterious disease" affecting chicks and fowls in hot weather is really due to spoiled and poisonous food. Do not stock up with much grain at a time. Feed it out promptly and fill feeders often. Be particularly careful in buying beef scraps and ready-mixed cracked-grain foods.

Apparently a good many beef scrap manufacturers are growing careless, seem to think anything good enough for poultry. They do not pay sufficient attention to the quality of their product, frequently adulterate the scraps or put up stuff that is fit only for fertilizer and is sometimes poisonous. Out of ten samples of scraps sent in by poultrymen recently, we found only one that was fit for poultry food. The other nine were absolutely not fit for poultry feeding. The demand for good beef scrap is far in advance of the supply. Manufacturers get a good price for their product, a big price often, and some of them are so unscrupulous that they fill orders with any sort of refuse that they can work off as scraps. They should wake up and pay more attention to quality and to delivering good values; otherwise they may find their business on the wane and a big crop of damage suits on their hands. We believe the poultryman who loses chicks and fowls from bad beef scrap has a good chance to recover from the manufacturer.

Cracked grains spoil quickly in hot weather. Some cracked grain mixtures are made up from inferior quality grains. Be sure when you buy any ready-mixed cracked grains that they are sweet and sound. Such should be freshly prepared. If old and stale, refuse to buy it. If it is lumpy and appears to have heated, if it smells musty, if it shows greenish and bluish mould on the particles of cracked grain, refuse it, for cracked grain of that sort will poison your chicks and fowls.

Remember, "SAFETY FIRST."

Shoot the Foxes.

IN many sections of this country those who "follow the hounds" appear to think it a criminal act for a farmer or poultryman to shoot a fox.

For several years poultrymen of the Massachusetts south shore have worked hard to get the state to put a bounty on foxes, and many hearings have been held. To hear the "fox hunters" at these hearings one might easily imagine that the clan of Reynard the Fox possessed all the virtues in the calendar and no vices. We learn that no fox would deign to steal and kill chickens and that the fox is one of the most cunning and virtuous of the "four-footed friends of man." Also that foxes should be protected and encouraged to breed in woodland dens, that the gallant fox hunters may make the moonlight nights hideous with the baying of hounds on the trail of the virtuous fox. Of course no one should interfere with this glorious and manly sport, and it matters little that the farmers' fields are invaded and his crops ruined by the "sportsmen" (?).

What has amounted to protection for the foxes has resulted in a remarkable increase in the numbers of these pests on the south shore, and their boldness and audacity is astonishing. In our home section they have repeatedly been seen in the public roads and in farm dooryards. They carry off chickens, fowls, geese and ducks in broad daylight and appear to have no fear of entering fenced poultry runs to seek their victims. Many of our friends complain of serious losses of poultry from foxes.

Although we have found them troublesome in past seasons, we have never before had as much trouble with foxes as this spring. Thus far we have not been able to catch one of the crafty villains. On one bright June afternoon foxes broke into the run of one of our poultry houses in the woods and killed ten yearling White Plymouth Rocks and carried off eight of them. So cunning and crafty is thief Reynard that we haven't yet been able to get a shot at him. Fox skins are worth the taking even if there is no bounty, and poultrymen should shoot, trap and endeavor to kill off the fox pest. It will take quite a few good pelts to make up for the loss occasioned by a single raid of hungry foxes. Shoot the foxes.

A. P. J. 1914 Chick Growing Contest.

SEVERAL readers who entered the 1914 Chick Growing Contest write that they are having fine luck with their chicks and are getting some good photographs and hope to win one of the prizes when the contest closes. There are a nice lot of entries and we hope for some very interesting photographs of chicks of different ages in a number of popular varieties. The reports of the experience of contestants should prove most interesting and helpful to others, and we hope all who have entered will keep up their interest and do their utmost to win.

DR. WOODS' NOTES AND COMMENT.

Come, Consider Constitution, Chicago Convention.

* * *

The committee of seven to revise and codify the constitution and laws of American Poultry Association presents its report in 30 pages of closely printed matter. Every member is now supposed to have a copy of this report. If you did not get yours, write to Secretary Campbell at once and ask for a copy. Read it and digest it. If unable to attend the Chicago Convention August, 10th to 15th, write to the Secretary and express your views concerning the proposed constitution and laws. If you can come to Chicago, come prepared to vote intelligently on the new con-

Buff Orpingtons **The Fashion Plates**

Eggs at half price. Stock quoted far below its real value. 40 cocks and 200 hens offered singly or in pairs, trios, pens or mated yards.

These are a part of **our 1914 breeders** and worth while for you to own.

Have you seen **The Orpington Fashion Plate Book?** It's crowded with **poultry talk**, beautifully illustrated, 56 pages. Free.

Here are three little labor-saving sanitary devices you cannot afford to be without. They are made of heavy galvanized iron, extra deep, and will fit any Mason Jar

stitution and laws. The committee has worked hard to help the Association to help itself; the final consideration of the matter is now up to YOU.

* * *

On first reading it appears that the new laws are designed to make the Association more effectively operable and to put State and Provincial associations on a better and more powerful footing. When the new constitution, if adopted, goes into effect the Branch as we now know it will cease to exist. State or Provincial associations are to take the place of the branches and are to perfect their own organizations, fix their own fees, dues and membership requirements and the organization will have representation on the Executive Board of A. P. A. The independence of the state and provincial organization should make it a greater power for local benefit than the old branch organization.

* * *

Section 103, Article XIV, of the proposed new laws ought to be revised and amended. It is too narrow minded and reminds one of the story of a great book that was designed to help humanity. The book was published only in a "de luxe" edition and sold at a high price by subscription. After the author's death certain public spirited persons endeavored to have the book published in a low cost paper-covered edition so that the masses might buy the book and profit thereby. The heirs-at-law objected and refused to allow the cheaper edition because it would make the book "too common" by thus allowing it to be broadcasted among the common people. Section 103 practically says: If the show management buys its ribbons of the A. P. A. and employs A. P. A. licensed judges then the A. P. A. will encourage exhibitors by allowing them to compete for A. P. A. certificates, diplomas and medals (special prizes), provided that the competing exhibitor is an individual life member of the A. P. A. and has duly paid his ten dollars into the treasury. It makes no difference if some non-member has a better bird in the same class, the life member will win on his membership and not on the merit of his specimen and will get the special prize, provided the judge has a license and the management bought its ribbons at the A. P. A. store. Great encouragement of exhibitors that!

* * *

The proposal to fix the date of the annual meeting, beginning the second Tuesday in August of each year, is a good one. Section 11, Article III, of the Constitution reads:

"Section 11. The annual meeting shall begin the second Tuesday in August of each year, the place of holding it to be determined by a mail ballot of the association at the time and in the same manner as the mail election of officers.

"It shall not be held at any other time, or in connection with any poultry exhibit or display, unless for extraordinary reasons the Executive Board recommends at an annual meeting that exceptions to one or both of these specifications be made for the next annual meeting; in which case the time, as well as the place, shall be determined by vote of the whole association in the annual mail ballot.

"(Note—This exception is made to provide for such cases as the Panama-Pacific Exposition in 1915, when it would be impractical to hold the meeting of the Association separate from the poultry show.)"

The various provisions covering the Executive Board and particularly the elective members of same, their special preference and perquisites, will bear careful reading and consideration. The Executive Board is to be made up of the President, Vice-President, Secretary, six elective members and the Presidents (or their substitutes) of all State and Provincial members. It is provided that:

"Section 28. The Association shall pay the railroad fares of the President, Vice-President, Secretary, Treasurer and the elective members of the Executive Board to all executive meetings, of the Election Commissioner for attendance at the annual meeting, and of such members of the Committee on Judiciary, and the Committee on Welfare, Grievances and Appeals as are not members of the Executive Board, and shall allow these officers and committeemen $5.00 per day for other expenses while on service. All other committees shall receive such expenses and compensation as the resolutions creating them provide."

It will be noted that no provision is made for the expenses of the ex-officio members of the Executive Board and that the elective members of the Board are given preference in committee assignments. Mr. Robinson, who helped prepare and edited the proposed constitution and laws, explains this in June Farm-Poultry as follows:

"A feature which may come in for some criticism at first is the preference generally given to the elective members of the executive board in committee assignments. There is a reason and a good one for this. Those members of committees selected from ex-officio members of the board will not have their expenses paid by the association. Presumably they will be paid by the State or Provincial organizations, but as the A. P. A. cannot legislate for them, there is not the same certainty of the attendance of an ex-officio member of a committee at annual meetings that there is of the attendance of an elective member. In all provisions relating to the composition of committees, special care is taken to insure the attendance of a working portion of each committee without putting extraordinary expense upon the association. This, of course, means that the elective members whose expenses are paid anyway are required, if they do their duty, to 'work for their passage'. Upon them the association places the greater responsibility for the work of committees of which they are members."

* * *

It is proposed to have the Standard revised once in eight years instead of every five years and provides that the Committee on Standards consist of five members, two of whom shall be general licensed judges, one a competent artist, and one a man qualified to edit the Standard. We would suggest making it a committee of three, one a competent general poultry judge, one a competent poultry artist, and one a man qualified to edit the Standard. Given the proper power and sufficient means to produce a good book, three such men should be able to do better work on the Standard than five could. Why not revise the Standard once in ten years instead of eight?

* * *

State or Provincial organizations pay no fee for membership in the A. P. A. but the representative of such organizations on the Executive Board must

be a life member of the A. P. A. Considering the advantages of being represented on the Board the State or Provincial organization should gladly provide for the expenses of its representative.

* * *

Following is the section relating to choice of elective members of the Executive Board:

"Article IV, Section 26. In 1915 no elective members of the Executive Board shall be chosen. In 1916 one member shall be elected for two years, and two for three years. In 1917 one member shall be elected for one year and two for three years. At each election the candidate or candidates receiving the largest vote shall have the longest term. Beginning in 1918, the six elective members of the Executive Board shall be elected two each year for terms of three years, in such a manner as to give one representative to each of the following geographical districts:

"District I, Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania.

"District II. Delaware, Maryland, District of Columbia, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas.

"District III. Ohio, Michigan, Indiana, Illinois, Wisconsin.

"District IV. Minnesota, North Dakota, South Dakota, Nebraska, Iowa, Missouri, Kansas, Oklahoma.

"District V. Montana, Wyoming, Colorado, New Mexico, Arizona, Utah, Idaho, Washington, Oregon, Nevada, California.

"District VI. Canada and Newfoundland.

"These geographical divisions shall be recognized in the election of members of the Executive Board beginning with the first election held after this Constitution becomes operative."

If the new constitution and laws should be adopted, it is apparent that such committeemen and other officers as are to be paid railroad fares and $5 per day for other expenses, while on service, will have to earn every cent of their expense money if they faithfully do their duty by the association. There does not seem to be much chance for "junketing" at the association's expense unless provided for by the association in special resolutions and appropriations therefor. If the constitution and laws mean what they appear to say there should be less opportunity for talk hereafter about members seeking office chiefly for the purpose of having their expenses paid to association meeting points. The official who conscientiously does his duty by the association isn't going to be provided with any sinecure and he will be apt to think twice before seeking an office that may interfere with and take much valuable time away from his personal affairs.

The big annual field meeting and poultry convention of the Massachusetts Agricultural College, in co-operation with the Massachusetts State Poultry Association and Mass. State Branch of American Poultry Association, will be held at the college, Amherst, Mass. July 22, 23 and 24. Last summer the field meeting was a record breaker for attendance and interest and was reported to be the largest gathering of poultrymen and women held in this country. Every effort is being made to make the 1914 meeting this month bigger, better and busier than that of last year. Prof. John C. Graham, head of the college poultry department, has prepared a fine and interesting program for the meet that should bring out a big attendance. There are great possibilities in a meet of this kind where there is abundant opportunity for the interchange of ideas and to benefit by the observations and experience of earnest poultry workers. Every poultryman or woman is appointed a special committee of one to attend the convention and to invite other persons interested in poultry to attend. Summary of the program follows:

WEDNESDAY, JULY 22.

1:30 P. M.—Address, "Diseases of Young Chicks," Dr. George E. Gage, Department of Veterinary Science, M. A. C.

2.30 P. M.—Address, (a) "The Preservation and Use of Poultry Manure;" (b) "Crops a Poultryman Can Grow Profitably," Prof. S. B. Haskell, Department of Agronomy, M. A. C.

3:00 P. M.—Address, "Advantages in Raising Fruit in Connection With Poultry,"

Prof. F. C. Sears, Department of Pomology, M. A. C.

3:30 P. M—Visit to the poultry plant.

7:30 P. M.—Discussion, "The Agricultural College and the Poultry Industry." From the standpoint of the college, Profs. Hurd, Foord, Brooks, Morton, Ferguson and Graham. From the standpoint of the poultryman, all poultrymen present, leader, Dr. N. W. Sanborn, Holden, Mass.

8:30 P. M.—A free-for-all discussion. (a) "What Is a Utility Bird?" (b) "Has the Large Intensive Poultry Farm Come to Stay?" (c) "Can Utility Poultry Be Standardized to the Same Extent as Standard Bred Poultry?"

THURSDAY, JULY 23.

9:00 A. M.—Address, "Some Results of Our Experimental Work That Are of Practical Value to the Poultryman," Dr. H. D. Goodale, Biologist, Department of Poultry Husbandry, M. A. C.

10:00 A. M.—Address, "White Diarrhoea in Young Chicks" (some recent experimental data), Prof. W. F. Kirkpatrick, Connecticut State Agricultural College, Storrs, Conn.

10:30 A. M.—Adjourned session of Massachusetts State Poultry Association, President George F. Eastman in the chair.

Address, "A Strong State Poultry Association and What It Can Accomplish," Geo. V. Smith, Secretary Connecticut State Poultry Association.

11:15 A. M.—Address, "The Wise Use of State Money in the Development of the Poultry Industry," Hon. Wilfrid Wheeler, Secretary Massachusetts State Board of Agriculture.

1:30 P. M.—Address of Welcome, President Kenyon L. Butterfield. Response, W. B. Atherton, Secretary Boston Poultry Show Association. Address, "The State as a Factor in the Development of Such Agricultural Industries as Poultry Culture," Governor David I. Walsh. Address, "A Poultry Farm in Massachusetts—The Farm—The Project—The Buildings—The Profits," illustrated with charts, drawings, etc., Prof. J. C. Graham, Department of Poultry Husbandry, M. A. C. Address, "Opportunities in Poultry Keeping for the Farmer," Harry M. Lamon, Senior Poultry Husbandman, U. S. Department of Agriculture, Washington, D. C. The social hour, a general handshake.

7:30 P. M.—Stereopticon lecture, "Poultry Feeding," Prof. J. C. Graham.

8:00 P. M.—Session of the Massachusetts State Branch of the American Poultry Association, President Maurice F. Delano in the chair. Opening remarks, "The Breeding of Standard Bred Birds as a Means of Developing the Poultry Industry in Massachusetts," President Maurice F. Delano, proprietor of Owen Farms. Address, "The Breeding of Pure Bred Poultry Looked at From the Standpoint of the Modern Science of Genetics," Dr. Raymond Pearl, Department of Biology, Maine Agricultural Experiment Station, Orono, Me.

FRIDAY, JULY 24.

8:30 A. M.—Address, "Poultry House Construction," Prof. H. R. Lewis, New Jersey Agricultural College, New Brunswick, N. J.

9:30 A. M.—Address, "How to Select for Breeding Purposes the Ten Best Hens or Pullets From a Flock of 100," D. J. Lambert, Rhode Island Agricultural College, Kingston, R. I.

10:00 A. M.—The Roast Chicken—A demonstration, Prof. Laura Comstock, Department of Economics, Extension Service.

10:15 A. M.—Demonstrations at poultry plant. 1. Caponizing, H. D. Smith, Rockland, Mass. 2. Killing, picking, dressing, etc., Mr. Kelley, foreman of college poultry yards. 3. Making post-mortem examinations of diseased specimens, etc., Dr. H. D. Goodale.

* * *

June prices on grain in the East have been high and the quality of the grain poor. Weather for the greater part of spring and early summer cold, windy and damp or wet, with now and then an exceedingly abrupt change to one or two very hot days followed by another quick change to a cold spell. On June 6th we had a white frost in the morning followed by chilling winds and fog. While the middle states were reporting extreme heat, New England was shivering and the weather man reported Boston as the coldest city on the map. On June 11th everybody was sweltering under a sudden hot wave and the chickens sought shady retreats and stayed in them. It has not been a good season for chickens in the East. Unfavorable climatic conditions, poor quality and high priced feedstuffs are not conducive to big flocks of fine chickens. It looks like a short crop of early chicks. We have seen some fine flocks and some very poor ones. Our own chicks have done well with the exception of one incubator lot that came out at the beginning of a three weeks cold and wet spell. The majority of them came through in fair shape but they do not show the quality and growth that is in the flocks that had more favorable weather conditions at the start.

Owen Farms Birds

Have demonstrated their unequalled exhibition quality by winning the highest honors in their own and customers' hands at every show from the Atlantic to the Pacific.

They have demonstrated their utility quality in the hands of thousands of customers all over the United States and Canada.

Owen Farms treatment has made friends of its customers and a great number of the new customers that come to **Owen Farms** for their stock and eggs for hatching are sent by these friends.

Owen Farms Youngsters

This year are wonderfully uniform in quality. Among them are **winners** for any show they may enter. Also strong, husky breeding birds that will produce winning show birds, and birds of profitable utility quality.

Hundreds of these youngsters were hatched in January and February and will be ready for the **early fairs in August and September.** There is a great scarcity of early chicks throughout the country this year and the demand is going to far exceed the supply for **finished youngsters** for the **early fall fairs.**

This is why I am telling you in my July ad this year that you can come to me and get the **finished youngsters** to fill out your string.

I will have a few **early moulted cocks** and **hens** in all my varieties to **win** for you.

Whatever your **weak point** is, write and tell me just what you need and if you **come** to me **early** I will have the the birds to accomplish for you just what you desire.

Over 9000 old and young birds are on **Owen Farms** and among them are the exact birds you want for **showing** and **breeding** and for **utility purposes.**

Buff Orpingtons
White Orpingtons
White Plymouth Rocks
White Wyandottes and
S. C. Rhode Island Reds

All adult birds sold during July at **just half the price** they would have brought prior to the breeding season.

I want your order, and **remember** your **absolute ultimate satisfaction** means my **permanent success.**

OWEN FARMS

107 William St., Vineyard Haven, Mass.

MAURICE F. DELANO, Prop. **FRANK H. DAVEY, Supt.**

water during the hot weather. Don't feed too heavily on very hot days. Where food is kept before the birds in feeders and hoppers they are not apt to overfeed, but when hand fed the feeding can be overdone. Three meals a day are enough for hot weather chicks from the first feed to roosting age. Don't feed cut green bone to growing chickens. If good beef scraps cause looseness of bowels in hot weather, scald the scrap and mix with a good fresh ground, sound grain mash mixture. Supply fresh green range frequently or supply abundant succulent greens. A full feed once or twice a week of scalded fresh fish will help growth and condition wonderfully.

* * *

The Third International Poultry Exposition opens on the Million Dollar Pier at Atlantic City on July 4th. This summer poultry show promises to prove an even greater success than that of last season. The exposition continues until September 1st and will be viewed by many thousands of interested visitors. Exhibitors of the past two years tell us that the summer show helps to make sales and is well worth while. All exhibits are attractively displayed and the poultry pens are sufficiently large and comfortable to show off the birds to advantage. This show is conducted by the Poultry Item and will be in the personal charge of Editor Cornman. This year there will be no prizes or other awards. All entries will be for display only and not competitive.

* * *

From the Missouri State Poultry Experiment Station we have received an excellent and practical egg candling chart in colors. This chart shows clearly the appearance of a fresh egg before the candle and also when removed from the shell; a slightly stale egg showing evidence of incubation shown before the candle and out of the shell; a stale egg, showing settled, flattened yolk and thin white, before the candle and out of the shell; an egg with yolk beginning to adhere to the shell, a blood ring egg, a cracked egg invaded by mould, an addled or "white rot" egg and an egg with green white, all shown as seen before the candle and when removed from shell. This chart should prove very useful to all who have occasion to candle eggs.

* * *

The Canadian Department of Agriculture has issued an interesting bulletin by Victor Fortier on "How to Tell the Age of Hens and Pigeons." The author believes he has found a certain way to tell the age of fowls, chiefly by means of the appearance and length of the secondary feathers, but also by the general appearance of the bird, the skin, the legs and spurs. In order to have the feather test yield satisfactory results the molt must be over and all the feathers fully developed. The author calls attention to a short feather between the primaries and secondaries which he designates the "axial or intermediate" feather and which is independent from the primary and secondary feathers and may be easily demonstrated by spreading the wing open. In a fully feathered pullet between six and fourteen months old the first secondary near the axial feather is shorter and more rounded at the extremity than the others and the quill is more central ending in a short point slightly prominent. There is only one short secondary,

as described, until the next molt when a second shortened and rounded secondary appears beside the first; thus there should be two charcteristic short secondaries in the wing of a hen from 18 months to two years old. In a three year old hen are found three of these short secondaries, in a four-year-old four characteristic secondaries and so on up to the tenth year. The last marked or short feather is always the shortest and the furthest from the axial feather. We hope some of our readers will secure this bulletin and test out the author's theory. At the present time we have no hens older than eighteen months and these are not in sufficiently full plumage to make a satisfactory test.

* * *

In these "eqaul suffrage" days when every body seems bent on "swatting" the "rooster," it might not be amiss to say a few kindly words for the much abused male bird. Even our National Department of Agriculture promoted a "rooster day" for the express purpose of "swatting" the rooster. Does the lusty crower deserve it? Experiment station evidence has not shown that fertile eggs deteriorate more rapidly than non-fertile eggs when properly gathered and kept. Eggs spoil because the poultry keeper is careless about gathering them and leaves eggs in the nest to be partly incubated, or he keeps them in a warm room in the sun until they spoil, and then we "swat the rooster" because he did his duty and someone else failed to care for the eggs properly. Why make the rooster the scape-goat? Why not "swat" the careless poultry keeper, the grocer man, the shipper and the egg dealer and all others who abuse good eggs? It is unwise and unnecessarily expensive to carry more male birds and particularly surplus males than are needed on the poultry plant. It is often a good plan to allow hens that are to be kept over another winter a brief summer vacation from attentive males when the eggs are not wanted for hatching. But a few good males are very desirable to have about the plant. Some you will need for next season's matings, some will be wanted for sales purposes and some can be made very useful in summer matings. Summer eggs for hatchings are in demand by roaster growers. Summer and fall hatched chicks make profitable fall and winter chickens and spring roasters or capons. You can't have them if you get too busy "swatting" roosters. Better give the rooster a fair chance and "tie the can" to the lazy shiftless folks who are so careless in handling perishable foodstuffs.

REWARDS OF PRIZE CONTEST.

The prizes of the great American Poultry Journal $500 cash prize contest, which closed June 15th, 1914, were awarded as follows:

HIGH CLASS EGGS FOR HATCHING

Have you ever tried to hatch eggs in July, August or September? If you have not, then take our advice and try it and you will find that the very finest kind of chicks can be hatched and raised during these months. There is no better breeding stock in the country than ours, it doesn't matter where you go. Our prices as listed below are within reach of everyone. We sell more thoroughbred chickens of all kinds than any two of the largest advertisers in this country. Over a quarter of a century in mating, breeding and selling thoroughbred fowls has given us the knowledge that enables us to produce superior specimens. Send us your order as soon as possible as there are many who will take advantage of the remarkable low prices for high grade eggs as listed below. Remember the eggs which we will send you are from the same breeding pens from which we sold eggs during the Spring at double the price.

Chicago Making Plans for a Big Crowd

The Thirty-ninth Annual Convention of the American Poultry Association will be the Biggest, and Most Satisfactory Ever Held

IF you miss the 39th Annual Convention of the American Poultry Association this year you will certainly regret it. It makes no difference if you are a member of the association or not, the Chicago Poultry Society and Chicago Association of Commerce invite you to come to Chicago and see what they have in store for you. Attend the meeting this year and we are sure you will become a member of the greatest live stock association in the United States, the "American Poultry Association." Bring the ladies, the babies, your sons and daughters, your uncles, aunts and grandparents. There's plenty of room in Chicago and we will take care of everyone in great manner. Chicago is not a "Flag Station," no trains run through the city, they all stop there, for Chicago is the end of the line, the center of business, enjoyment and recreation. There are thirty-eight railroads terminating in Chicago, representing one hundred thousand miles of railroad lines, forty per cent of the railway mileage of the United States. You can get excellent accommodation all the way from $1.00 per day up for a pleasant room in a first-class, clean, modern hotel to $50 per day for the "Bridal Chamber" in leading hotels. There are more first-class restaurants in the central district to the square mile than you will find in any other city, and you can get well cooked meals at all hours and at all prices. You will find the finest and most pretentious amusement parks in the world, you will find theatres that are considered the best and most beautiful in the United States. You will find better bathing beaches and see more people in bathing than you did at Atlantic City. In fact, Chicago offers you everything that all other cities combined have done, with the exception of "Mountain Views." The climate cannot be surpassed during August, for the cool lake breezes temper the stifling heat waves. Perhaps you did not know that more people from the South spend their vacation in Chicago than at any other place or resort. Think it over, take a vacation and attend the 39th Annual Convention.

THE hotels of Chicago deserve more than a passing mention because not only of their number, elegance and service, but because they offer so much that is needed and hardly recognized in the general thought of what is required when some great convention is planned. There is in the city of Chicago every possible variety of hotel, with the best equipment, in desirable locations, and adapted to every possible visitor. In the downtown hotels are to be found rooms en suite arranged so that home is at once suggested, and in some of the hotels there are women to care for the needs of women guests. In these hotels are various banquet rooms, large and small, suited for the small as well as the great convention, open air dining rooms, beautiful ballrooms, where the largest gatherings are elegantly cared for, and private rooms, where those who wish can have a dinner party and be quite as much apart as if in their own homes.

Chicago has over thirty miles of water front on Lake Michigan, and with its parks and its suburbs, provides conditions and facilities which make Chicago a city of midsummer charm. Boating, bathing, golf, baseball, all sports easily accessible.

Geographically, Chicago is less than three hours' ride from the center of population of the United States. Its situation on the southern extremity of Lake Michigan has made it the natural transportation center of the country—as a matter of fact the greatest transportation center in the world—and its industrial enterprises thus have the benefit of exceptional transportation facilities both by lake and rail.

Chicago is deservedly a favorite convention city because it is easy of access, delightful for a visit, and if the testimony of convention records can be accepted as reliable, more delightful every time it is revisited. Those who come to summer conventions find the Chicago climate attractive, and there are always facilities for studying those things which most interest aside from convention business, for with its great libraries, art museums, and educational centers Chicago maintains its prestige as a metropolitan city by being fully equipped for every variety of research.

Chicago invites you, and will take care of you in a manner that will be long remembered. The city will be yours, you are our guest and there will be no charge for the many pleasures outlined for this great event. All roads lead to Chicago, the "City Beautiful." Come one, come all. Don't forget the dates, August 8th to 15th, inclusive.

Reservations may be made at any hotel through E. J. W. Dietz, Secretary of the Chicago Poultry Society, 123 W. Madison St., Chicago, Ill. State desires and your requirements will be attended to.

International Egg Laying Contest.—Report for the Month Ending April 30, 1914.

THE White Wyandottes, entered by Tom Barron, England, are still leading in the International Egg Laying Contest at Storrs, Conn. It is to be remembered, however, that the contest is now but half over; not only that but in the fifth month the Leghorns gained on this leading pen so that as yet it appears to be anybody's race. On February 1st, this pen of Wyandottes was leading the next nearest pen by 86 eggs, on March 1st by 120 eggs, on April 1st by 145 eggs, but on May 1st the tide seemed to have turned and this lead has been reduced to 131 eggs. Perhaps this is nothing more than would be expected inasmuch as it is the season when the heavier breeds are broody. On the other hand it is to be remembered that individuals among the Reds that enjoy the reputation of being the broodiest of breeds sometimes appear to be immune to the maternal instinct. In the contest last year two Reds that laid 245 and 248 eggs respectively were, taken together, broody but once during the entire year.

Inasmuch as this pen of English Wyandottes has maintained its place as the leading pen in the contest many breeders have been interested in the type or kind of Wyandottes these birds really are. A prominent New England poultry judge, W. H. Card of Manchester, Conn., visited the plant and was requested to judge these Wyandottes. He gave it as his opinion that they were by no means American show type but conformed more nearly to the Rhode Island Whites. He said furthermore that the little white in the ear lobes would seem to indicate in his mind a possible admixture of Mediterranean blood. On the other hand no one probably would wish to say that these birds are cross breds, mongrels, or anything of that sort. They are Wyandottes with a longer back than the American show type. They are drawn out a little rather than bunched in a ball. In a way it makes little or no difference whether they conform to the recognized show type or not because they are not being exhibited. They have been put in a laying contest where they are expected to deliver the goods and they have delivered them. This pen not only holds the pen record to date but they have also the best individual record, one of these birds having laid up to May 1st 137 eggs. It is interesting to note in this connection that Baroness IV that yielded 282 eggs last year, thereby winning the championship of American egg laying contests produced only 132 of those eggs in the first six months of the year, thus the Wyandotte has a lead of five eggs over that record. It is only a question whether or not she can keep the pace.

The ten best individual scores for the first six months of the competition are as follows:

Pen.	Breed.	Eggs.
14.	English White Wyandotte	137
4.	N. Y. Barred Plymouth Rock	118
35.	N. H. S. C. R. I. Red	117
42.	Conn. White Leghorn	116
42.	Conn. White Leghorn	115
40.	Conn. White Leghorn	115
40.	Conn. White Leghorn	114
16.	Conn. White Wyandotte	112
40.	Conn. White Leghorn	111
72.	Mich. Buff Leghorn	111

Thirty-six individuals including Barred, White, and Buff Plymouth Rocks, White Wyandottes, Rhode Island Reds, White and Buff Leghorns, and White Orpingtons laid from 25 to 27 eggs each during the month of April.

At the close of the first six months last year the five leading pens comprising 25 hens had an average production of 99.7 eggs and finished the year with an average production of a little more than 213 eggs each. The five leading pens in the present competition comprising 50 individuals had made an average record for the first six months of 95.7 eggs each. It will be noted that while these figures are based on the five leading pens in each case they are not strictly comparable because of the fact that 25 individuals are being compared in one case with 50 individuals in the other.

The mortality for the first six months has amounted to 30 hens out of the competing pens from total of 820 birds or a little over 3½ per cent. It is believed that the period of highest mortality has undoubtedly passed so that the total for year is not expected to amount to more than 5 or 6 percent. Many commercial poultrymen figure on an expected mortality of 10 per cent.

The total yield for all pens for the month amounted to 15,509 eggs or an average of 19⅓ eggs each thus the yield for April has exceeded the production of any previous month since the contest opened. This has not been true in the two preceding contests. In other words March has heretofore been the month of highest production whereas already stated in the current competition April although a shorter month has been the month of highest yield, due undoubtedly to the severe winter during which a great many New England poultrymen did not succeed in getting as many eggs as they had hoped and planned for.

The ten leading pens at the close of the first six months are as follows:

Tom Barron, Catforth, near Preston, England	White Wyandottes	1070
Storrs Experiment Station	White Leghorns	957
Francis F. Lincoln, Mt. Carmel, Conn	White Leghorns	939
Neale Bros., Apponaug, R. I	White Wyandottes	881
Merrythought Farm, Columbia, Conn	White Wyandottes	910
Dr. J. A. Fritchey, Harrisburg, Pa	S. C. Rhode Island Reds	824
Cecil Guernsey, East Cobleskill, N. Y	White Leghorns	782
Jules F. Francais, West Hampton, L. I., N. Y.	Barred Plymouth Rocks	759
A. B. Brundage, Danbury, Conn	S. C. Rhode Island Reds	756
Tom Barron, Catforth, near Preston, England	White Leghorns	754
Geo. P. Dearborn, Lake Como, Fla	S. C. Rhode Island Reds	741

FERRIS Leghorns

30% Less Than Actual Value

We raised 10,000 Improved White Leghorns this spring and you can get your pick of thousands of February and March hatched cockerels and pullets at 30 per cent less than regular prices. These birds show splendid development, and they have the low, well spread tails, good heads, with white earlobes and smooth, evenly serrated combs; typical shape in all sections, with long backs and full breasts, and snow white plumage that you must have in order to win. We have been breeding winners for the largest shows for many years. Ferris Leghorns are trap-nested. We have been breeding them for egg production for more than 12 years. We ship on approval and insure all birds for 30 days. If they get out of condition we stand the loss. Utility cockerels from $2.00 up, pullets and hens from $1.75 up. We have a number of very choice breeding birds to spare that we have used in our best matings. Write us for further particulars; we will be glad to tell you just what we have. The summer prices make it worth your while to buy now even if you do not need the stock until winter. Males that will then cost you $10.00 cost only $7.00 now; the $15.00 exhibition birds only $10.50.

We can ship eggs and chicks at once on receipt of order

There is still time to hatch chicks if you can give them good care. Chicks, $5.00 for 25; $16.00 per 100; $144 per 1,000 in June—$4.00 for 25; $12.00 per 100; $108 per 1,000 after July 1st. Eggs, $1.35 a setting; $6.00 per 100; $57 per 1,000 in June—$1.20 a setting; $5.00 per 100; $47.50 per 1,000 in July. Safe arrival of chicks and fertility of eggs guaranteed.

Our Catalog Is Free

It contains a lot of valuable information and will tell you all about White Leghorns and why they are best. Just write a postal today and let us send it and quote prices. Breed Ferris Leghorns and you will have eggs all next winter and can win wherever you want to exhibit. Take advantage of this summer sale and it will cost you very little to get a splendid start.

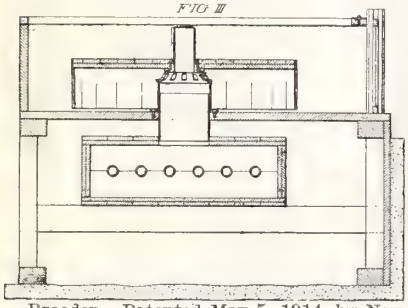
Recent Inventions for Poultrymen

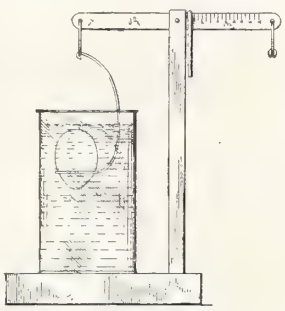
By Lester L. Sargent, Patent Attorney, Washington, D.C.



A NOVEL poultry appliance, the invention of Clarence O. Sheldon, Calallen, Texas, has feeding and watering troughs in its base set well in toward the center, overhead troughs containing oil or other vermin destroying fluid. Fabric members or curtains depend from the upper oil troughs, the shape of these curtains being retained by means of light reinforcing brace rods. The rods may be removed when it is not desired to use the fluid applying members to effect application of the

Poultry appliance. Patented May 5, 1914, by Clarence O. Sheldon, Calallen, Texas. No. 1,095,471.

fluid from above to the poultry when they approach to eat or drink from the lower troughs. A half interest in the invention has been acquired by Walter H. Waterhouse, of Texas. Patent 1,095,471.



A new brooder invented by Charles E. Bonine, Philadelphia, has been patented to the Newtown Giant Incubator Corporation, of Harrisonburg, Va. It

Brooder. Patented May 5, 1914, by Newtown Giant Incubator Corporation, Harrisonburg, Va. No. 1,095,263.

is the intention of the inventor that a single source of heat for the air be supplied to an indeterminate series of brooders. Each brooder has a cylindrical warm air dome provided with a chimney that furnishes a central support for the hover. A series of steps afford means for adjusting the height of the hover upon this support As the hover is successively advanced upon its support an increasing escape passage is provided, regulating the escape of warm air through the top of the hover, and introducing fresh air beneath the hover curtain. Patent 1,095,263.

James W. Yeager, Higginsville, Mo., is the inventor of an egg tester that tests eggs by their specific gravity, the eggs being supported in a looped wire

Egg tester. Patented May 26, 1914, by James W. Yeager, Higginsville, Mo. No. 1,097,832.

extending into a receptacle of water where the egg is supported, and having the egg-supporting wire loop attached to one arm of a scale bar. Patent 1,097,832.

Samuel W. Klass, Waukesha, Wis., has invented a new egg-testing device, the patent rights in which have been assigned to Arthur W. F. Klass, of Waukesha. The invention is intended for use in testing incubator eggs. An egg tray may be taken from the incubator with the eggs, placed in the tester without disturbing the eggs, and all the eggs in the tray speedily tested and the tray returned to the incubator after removing any eggs found defective. The device is an expansible cabinet having interior ledges adapted to receive and support incubator egg trays of different size, and is provided with electric bulbs or other means for illuminating the eggs in the eggs trays from the under side. Patent 1,097,446.

Ernest L. Tupper, of Nashua, N. H., has patented an incubator which involves the application of novel ideas.

He provides a nonporous diaphragm of rubber or some such material to be placed in contact with the upper surface of the eggs, has his heating pipes disposed just above this diaphragm, the idea being to follow the natural process of the hen more closely.

Contact incubator. Patented May 5, 1914, by Ernest L. Tupper, Nashua, N. H. No. 1,095,248.

The eggs are provided with a support of burlap or some such porous material so as to permit fresh air to come in contact with the under surface of the eggs. The thermostat which controls the heat circulating system in this incubator is positioned in the same relation to the diaphragm covering the eggs as the eggs themselves. Patent 1,095,248.

Other inventions patented in May include an intricate hen's nest devised by Peder L. Haakenson, Barton, N. D., in which the eggs as laid pass to separate compartments on a rotary platform beneath (patent 1,096,300); an automatic trap-nest for keeping tally on hens that lay and eggs laid, and having a divided egg-receiving tray, invented by Frank N. Brown, St. Johnsville, N. Y. (Patent 1,096,017); a coop of

Hen's nest. Patented May 12, 1914, by Peder L. Haakenson, Barton, N. D. No. 1,096,300.

convenient size and design for protecting a hen and her brood, invented by Charles Cabel, Hawkeye, Ia. (patent 1,095,628); and a larger coop invented by Charles E. and Bert F. Grant of Marion, Ind., having removable internal partitions by which the number of compartments in the coop may be easily altered without tearing the coop apart (patent 1,096,904).

An egg tester, invented by Perry A. Lown, Lima, Ohio, has a peculiar form of shelves in which the eggs are carried in independent trays, so that the trays can be brought successively over the light. The roller like egg shelves being operatively connected by an endless chain and sprocket wheels, the eggs may be easily turned while in their trays, as the turning of one roller shelf will so cause the others to turn. Patent 1,095,408.

A new feeding apparatus for poultry, invented by Axel Wahlstrom, Oakland, Cal., is arranged so that the weight of the fowls on a pivoted platform uncovers the feed trough. At other times the feed troughs are maintained closed so that rats, etc., can not obtain access to the food. Swinging cover plates over the troughs are raised by the weight-actuated platform in front of them, on which the poultry stands. Patent 1,098,069.

Robert Lee Caldwell, Trinity, Tex., has invented a coop which may be readily knocked down and folded after the poultry have been removed from it, thus taking up little space when not in use. The side and end walls fold inwardly. An interest in the patent has been acquired by H. I. French, of the same city. Patent 1,096,412.

David A. Jones, Wayne, Neb., has invented a pneumatic egg-crate. This shipping crate has a pneumatic cushion secured within the box and lid. The device has an ordinary valve and is inflated by a bicycle pump. Both the lid, cushion and the spaces between the egg cells are inflatable. Patent 1,097,804.

World's Greatest Layers

SOMETHING NEW—CO-OPERATIVE EGG DISTRIBUTION.

ALL are acquainted with the term, "Certified Milk" but few are acquainted with the term, "Certified Farms", meaning a guarantee of quality for any line of farm produce sold.

But ere long the Certified Farms Company will be widely known— the principle of selling from producer to consumer meeting every ideal of the ablest economists.

The object of this concern is to place in the hands of the consumer eggs not over 24 hours old from healthy hens in sanitary quarters, eliminating the middleman, but at the same time making purchasing convenient by establishing branch stores at various points in each city wherein the company will operate. The handling of general produce along the same lines is also contemplated. Here is the principle of operation. The Certified Farms Company, comprising a number of well-equipped, well-stocked and well-managed poultry farms, is to guarantee or certify to every customer, eggs in any quantity, regularly or irregularly and handled under the most sanitary conditions, not an egg being over 24 hours old and the prices being at all times reasonable.

There has long been a need for just such an organization. True it is, that many reputable poultrymen have individually established direct-to-consumer trade and are successful. But it takes co-operation to advertise successfully, to win the absolute confidence of a big buying public, to give the appearance of big capital necessary to sanitary handling, and to cope with the great variations of supply and demand.

You will undoubtedly be interested in knowing that some of the best poultrymen in the country are back of this organization. While this corporation includes a large number of farms and is bound to include many more in the near future, yet not one has been admitted or will be admitted, that does not measure up to the high standards absolutely necessary to the success of such an undertaking.

The Certified Farms Company is incorporated and capitalized at $25,000, fully paid. The President is the well known proprietor of Monmouth Farms, Mr. J. C. Punderford, Freneau, N. J. The Treasurer, Mr. C. J. Fisk, is also widely known as the owner of Wilburtha Poultry Farms, Trenton Junction, N. J.

Carefully planned advertising matter is now on the press and will be distributed post haste as soon as received. The publicity campaign—the most important problem at hand—has been carefully prepared and, we venture to say, successfully, for the officers are well acquainted with essentials of successful poultry product advertising through many years of experience.

The method of selling is this: High grade retail stores in various points of New York City (nd later, other cities) are to be used as the points of distribution. The literature directs the customer to the nearest branch. Each store will also do some local advertising. The eggs will be put up in the latest approved egg boxes—just as attractively decorated as candy boxes—sealed with the official wrapper of the company. The wrapper states, among other things, "Shipped the same day as laid."

The first distributing point is now established. It is the main office of the concern, located at 26 W. 59th St., New York City, next to Hotel Plaza.

New poultrymen please note this: You are cordially invited to make the above office your headquarters whenever you are in New York. Here's a chance to get acquainted with a movement that's bound to revolutionize some of the food distributing operations of the entire country. It means more money to the producer and better produce to the consumer. Just go around and get acquainted anyway, whether you're interested or not. You'll receive true poultryman's hospitality and the company's stenographers and other conveniences will be at your disposal.

Laid Two Eggs in One Day.

Q.—What caused one of my White Leghorn pullets to lay two eggs in one day? The first egg was laid early in the morning. At feeding time in the evening I just got into the door of the hen house in time to see the same pullet lay another egg in the litter. The egg was normal in size, perfectly formed, but had a very soft shell. At first I thought I might have been mistaken, but I couldn't have been, as there are only nine hens in that pen and I got ten eggs. I noticed that the pullet became drowsy and inactive and didn't seem to relish her food after laying the second egg. W. F.

Newport, R. I.

A.—It is not uncommon for hens in full lay to occasionally lay two eggs the same day. In case of your pullet she had probably eaten something that resulted in abnormal activity in the egg organs. Sometimes laying soft-shelled eggs and more than one in a day is one of the first noticed symptoms of diseased ovaries. If the pullet continues inactive and dumpish would put her out on a green range alone and feed only sound hard grain once a day.

Off-Colored Feathers in Minorca Chicks.

Q.—(1) I find several half-grown S. C. Black Minorca chicks, well feathered out, have long white feathers in wings and some have feathers laced with white in breasts. What is the cause of this? Will these birds be black all right when fully matured? I have just discovered that my breeding cockerel has half an inch of white on the tip of one wing feather. Is that the cause?

A.—(1) Black Minorca chicks when half grown are very apt to show more or less white in plumage. We wouldn't worry about it. The best of them will probably be all right when fully matured. Feathers that are injured during growth are apt to show white. Very few adult birds of black varieties are solid black all the way through the plumage; you can generally find some white if you look for it. It isn't fair to attempt to judge the plumage of any chicken when half grown; there will be many changes in appearance before full maturity.

Q.—(2) Does the breeding of Minorcas for heavy weight, say, over standard weight, injure the egg-laying qualities?

A.—(2) It is generally believed that birds of medium weight in most varieties prove to be the best layers. Some go so far as to claim that the small birds are the best layers and that overweight and over-size is not favorable to good egg yield. We doubt this theory and have yet to see any convincing proof that size makes any great difference in fecundity as an individual characteristic. We have had a good many large birds (large for the variety) that were good layers, and we have had small and medium sized birds that were equally good but no better layers. A good many persons in talking about birds above standard weight consider weight only. That is not fair or just. If the extra weight is due to the specimen being overfat in proportion to the normal body size and frame, then we should not expect the best egg-laying qualities, but if the bird was large framed and large sized in proportion to the extra weight, and otherwise in good condition, we see no reason why the egg yield should not yield eggs just as well as a smaller specimen under equally favorable conditions. We have had oversize birds in a number of varieties that were among our best layers.

Q.—(3) Why do some little chicks hatch with much more white on breast and neck than others? Does sex make any difference in the color?

A.—(3) Little chicks in all varieties show more or less variation in color. It is not always an indication of sex, although many poultry keepers believe they can distinguish sex by the appearance and markings of the newly hatched chicks. Sometimes it works out the way they think it will and sometimes it doesn't. We have picked sex successfully in one brood and in another brood of the same variety been badly fooled in the sex of the chicks even after they were almost half grown.

Are You Interested in Getting Started on a Paying Basis

with **Pape's,** the most profitable egg-laying strain of Prize-Winning **SINGLE COMB BLACK MINORCAS** in America? Am offering a "carnival of bargains," also all of our experience. Am selling eggs that will hatch, hens now laying, yearling and 1914 hatched males that will improve any flock, and chicks any age at rock bottom prices. White Orpingtons

Superb Type and Superior Quality

January and February Hatched Youngsters for Sale

Never have I had young chicks prove more completely the claim made for them regarding TYPE and QUALITY than does my present young stock. It is indeed a remarkable line of cockerels and pullets hatched in January, February and March. As it is possible to detect any minor faults in birds after they are eight weeks old, and to form a pretty fair idea as to how they are likely to develop, I have placed on sale about 600 of the most promising White Orpingtons ever produced. These are ready for delivery now—large, vigorous, massive birds raised on acres of blue grass sod.

Older Stock at Bargain Prices

Due to the fact that I must make ready for this younger stock, it will be necessary to dispose of a number of hens and cocks on the breaking up of my breeding pens the first of June. These, of course, must go at attractive prices; and here is an opportunity to get some foundation stock, the stamina and vigor of which could only be arrived at through the wonderful blue grass range commanded by Russell Cave Poultry Yards as a branch of the renowned 8,000 acre Elmendorf Farm. An extra fine lot of young Duroc-Jersey pigs for sale.

Summer Sale of Trap-Nested Layers

The Peabody Farms have in their Breeding Yards hundreds of birds that have high records as layers during the first five months of this year. We have thousands of early hatched chicks bred from them that are coming along in fine shape. We are now offering to the public our first Summer Sale. This will be an exceptional opportunity to secure **White Leghorns, Orpingtons, Rocks and Wyandottes** that are layers and have records behind them.

We are booking orders for cockerels. We will deliver the birds at your convenience. We will ship you all the birds you desire on approval.

July is the month to select your breeding **Drakes.** We have hundreds of **White Pekin Youngsters.** We are offering our old breeders at a great sacrifice.

We are now booking orders for September and October delivery of chicks.

We have **White Holland Turkeys, White Embden Geese, White Guineas and White King Pigeons. Mallard Ducks, Wild Geese, and Pheasants of all kinds.**

PEABODY FARMS, Hinsdale, Ill.

Q.—(4) In running a hot-water incubator the lamp was out one night from four to six hours. The eggs were cold, but the water pipes were warm. This was in warm weather. It was on the ninth day. I filled and lighted the lamp and the eggs were up to temperature again in four hours. Can I expect a fair hatch?

A.—(4) You will probably get a fair hatch and may not notice any ill result from your mishap.

Q.—(5) What is your opinion of hot-air incubators, especially those that only require one filling of the lamp for the entire hatch?

A.—(5) We have not used any machines of that type. We would not want to trust any kerosene lamp unless we filled, cleaned and attended to it at least once in twenty-four hours. It is a severe strain on any oil lamp to keep it burning twenty-four hours a day for three weeks and any operator certainly should be willing to devote a few minutes a day to care of the lamp. We have used both hot-water and hot-air incubators satisfactorily and if buying would give preference to one of the leading standard makes even though the first cost might seem high.

Q.—(6) Would it prove profitable for me to put in several good incubators and hatch chicks for neighbors at 4 cents for each live chick when they supply the eggs and 10 to 12 cents each for chicks when I supply eggs?

Howell, Mich. Mrs. B. K.

Q.—(6) If you are a successful incubator operator you should find custom hatching profitable. A good many women conduct such chick business satisfactorily. Until you gain experience in hatching livable chicks you are liable to have some disappointments. You should get at least 12 cents each for chicks from eggs you furnish and should charge 3 cents per egg for each egg put in machine by others or else get 6 cents per chick when they furnish the eggs. It is usually more satisfactory to furnish the eggs yourself and sell the chicks. When hatching eggs for others there is likely to be much dispute and dissatisfaction if the eggs do not turn out well, and it is better to collect a certain price per egg at the time they are put in the machine. Mark all eggs set and save the infertile ones to show to the customer who supplied the eggs.

Egg Eating and Other Matters.

Q.—(1) What is the cause of egg eating and how can it be prevented?

A.—(1) Egg eating is a bad habit, usually acquired by poorly fed or idle fowls kept in crowded or close quarters and where the nests are open to the light. Keep the birds busy and well fed, do not overcrowd, provide good-sized runs, supply abundant greens and keep the birds busy. Provide dark nests. Gather the eggs often. Don't leave cracked or soft-shelled eggs in poultry house. Put a few china nest eggs on floor for the hens to pick at until disgusted with attempting to eat them. Salt the mash food enough for seasoning. Supply crushed oyster shells and granulated bone.

Q.—(2) What causes soft-shelled eggs? Could lack of exercise do it?

A.—(2) Soft-shelled eggs may be due to insufficient supply of fresh green food and crushed shell. Frequently due to disturbance of egg organs resulting from careless feeding or from poisoning with grain smut and spoiled grains. Sometimes fowls overfat internally

Poultry Diseases and Their Treatment

By F. A. Kaupp, M. D.

A book containing 185 pages, 5x8 inches in size and is profusely illustrated with original half-tone and pen and ink engravings. It shows the many parasites, germs, and bacteria that attack our poultry, as well as tells the names of the diseases, the cause or causes, the symptom and lastly the *treatment for each disease.* The book is printed on a high grade super calendared book paper, substantially bound in cloth, linen sewed to make it flat opening and the title is stamped in gold. Every poultryman should add this very useful book to his library. Remember that we prepay all charges on the book to your town.

Price $1.50

from heavy feeding and lack of exercise will lay soft-shelled eggs. To remedy the trouble remove the cause.

Q.—(3) What is a good way to tell the age of hens? Is there any rule you could follow? W. T. F.

Wood Haven, L. I.

A.—(3) See "Notes and Comment" department in this issue, where this subject is referred to.

Hens Choke.

Q.—This spring one of my hens got something wrong with her and would throw back her head and make a noise as if something in her throat was choking her. Then several others got the same trouble and I thought they surely would get all choked. Think it must have been some disease, as they surely would not all begin to choke at the same time. I did not know what to do and so did nothing, and they are all about over now. Can you tell me what it was?

A.—In the treatment of disease it is always a good plan when you do not know what to do to do nothing. Simply give the birds good care, keep the quarters clean, supply plenty of wholesome food and see that they have an abundance of fresh air day and night. Let alone treatment is called expectant treatment, and when you don't know exactly what to do it is a good plan to try it and give Nature a chance to remedy the trouble, which in many cases she will do best without help. It is probable that your birds had a mild catarrhal inflammation of the throat, which may have been caused by irritating dust, or by climatic conditions, or from use of lice remedies and disinfectants.

Rations to Fit Local Supplies.

Q.—In the interests of poultry keepers of this section we would like to have you suggest suitable rations for chicks and laying hens with the following feeds at our disposal:

Corn	$1.80
Wheat	2.25
Kaffir corn	1.75
Milo maize	1.75
Oats	2.00
Bran	1.85
Shorts	1.90
Corn chop	1.85
Hominy meal	2.00
Cottonseed meal	1.80
Alfalfa meal	.90
Short cut alfalfa	.75

We can, of course, obtain other feeds, but they are too expensive and the ones given above are the cheapest obtainable. Prices are per 100 pounds. Will alfalfa meal or short cut alfalfa answer as a satisfactory green food the year 'round? Pecos Valley Poultry Assn.

Roswell, N. M.

A.—Alfalfa, either in meal or short cut, is good to feed when fresh green food is not plenty, but it is not a complete substitute for fresh raw succulent green food. At the price you can buy it, it makes a good, cheap addition to the ration.

Scratch grain mixture:

Corn	40 pounds
Wheat	25 pounds
Oats	15 pounds
Kaffir corn	15 pounds
Milo maize	10 pounds

Vary quantities of above from time to time as the fowls show preference for any particular grain.

Mash: (Parts by measure.) One part each of shorts, corn chops, hominy meal,

WILL PAY RELIABLE man or woman $12.50 to distribute 100 **Free** pkgs. Perfumed Borax Soap Powder among friends. No money required. **V. Ward Co., 224 Institute Pl., Chicago.**

a good beef scrap and short-cut alfalfa with two parts bran.

Chick food:

Corn	50 pounds
Wheat	25 pounds
Oats	15 pounds
Kaffir	10 pounds

Grind all together, in small quantities as needed, into a coarse granular meal of desired size for feeding. It is not necessary to sift it and the ground oat hulls will do no harm.

Silage for Poultry.

Q.—What do you know about silos and the use of silage for poultry? It seems to me that silage would have some advantages over other green foods if it can be successfully fed. H. S.
Elmont, Va.

A.—We know very little about silo construction, but some of our friends are very positive that a silo built of cypress staves is in every way superior to a concrete one. If we were about to build a silo should consult an expert on the subject. Some silos keep their contents in fine feeding condition and others do not. We have several friends who keep poultry as a side issue on dairy farms and who feed silage to their poultry in winter with very satisfactory results. Fine chopped corn fodder grown for ensilage is used and if not allowed to become spoiled or mouldy it should make good poultry food. If any of our readers have had practical experience with silos and silage for poultry, we will be glad to hear from them.

Orpingtons.

Q.—What is the difference between S. C. White Orpingtons, R. C. White Orpingtons and Crystal White Orpingtons? I raise Orpingtons myself and would like to know. Mrs. E. C. M.
Fennville, Mich.

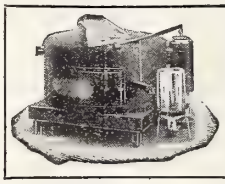
A.—S. C. stands for single comb. R. C. for rose comb. "Crystal White" is simply the breeder's name for his particular strain of White Orpingtons.

Blue Legs in Orpingtons.

Q.—(1) Have three Orpington chicks about ten weeks old that have blue legs. Otherwise they look good and are large for their age. What is the cause of the blue legs?

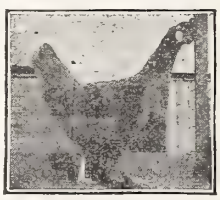
A.—(1) Now and then chicks come with off-colored legs inherited from some ancestor with legs of that color. Sometimes when small chicks show off-colored legs at birth the legs may change in color as the chicks develop. With chicks as old as yours the blue is probably permanent.

Q.—(2) One of my hens did not lay any eggs for five days. Before that she laid an egg every day for nearly six months. What is the trouble?



A.—(2) No trouble at all, probably. After such remarkably good laying she is certainly entitled to a brief rest from egg production if she wants it.

Q.—(3) I enclose sample of scratching food that I bought from mill. Is this all right? The hens do not eat the millet in it or the sunflower seed, but sometimes they eat the peas. I am disappointed that the sunflower seed and millet are waste. If this scratch grain is not all right please give me a formula. D. H. K.
Mt. Vernon, Wash.



A.—(3) It appears to be a very good scratch grain. There is no millet in it and that you take for millet is broom

Crown Bone Cutter
Cuts up scrap bones easily and quickly—no trouble. Feed your hens fresh cut green bone daily and get more eggs. Send for catalogue.

corn. Your birds will probably clean it all up after they become used to it.

Question on Egg Testing.

Q.—A few days ago when testing some Leghorn eggs I rejected two eggs as infertile. Now these two eggs showed no dark mass in center which moved when egg was inverted, but they did show a network or spider's web of bright red blood vessels. Were these eggs fertile or infertile? R. B.
Sheldon, Iowa.

A.—They were fertile. It is apparent that you need both instruction and experience in testing eggs. See chapter on egg testing in book "How to Raise Chicks."

Sex in Ducks and Geese.

Q.—How can I tell the male from the female in ducks and geese? It also bothers me to tell a pullet from a hen.
Minneapolis, Minn. Subscriber.

A.—In ducks the female has a coarse, noisy, deep-throated quack, the drake makes only a hoarse, rather high, whispering note.

In geese the only sure method for determining sex is to put the bird on its back and roll back the margin of the vent. If it is a gander you should be able to find the penis, which is quite prominent when uncovered.

Experienced poultrymen frequently find it difficult to tell a pullet from a well-kept hen. See notes and comment in this issue.

Eyelids Stick Shut in Chicks.

Q.—I have some trouble with little chicks having their eyelids stick shut. Sometimes their feet swell and turn black. Have one old hen affected in the same way. Her feet are a blue black, considerably swollen and covered with big water blisters. F. G. C.
Sheridan, Wyo.

A.—Catarrhal inflammation of the eyes from irritating dust or from colds is common cause of chicks' eyelids gumming up and sticking shut. Wash the eyes with a weak creolin solution, one teaspoonful in a quart of water, and then apply a little vaseline. The foot symptoms are new to us. Would expect to find that some powerful corrosive substance had been carelessly used about the poultry runs.

Purple Barring in Black Orpingtons.

Q.—(1) If at any time a Black Orpington chick is stunted or suffers a check in its development in any way, will that cause purple barring?

A.—(1) No. The purple barring is more apt to be entirely a matter of what is in and back of the breeding stock.

Q.—(2) Why is it necessary to use white corn only when raising Black Orpington chicks?

A.—(2) It isn't.

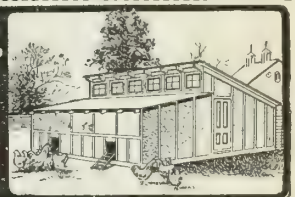
Q.—(3) Can I feed yellow corn with good results?
Pittsburgh, Pa.

A.—(3) Yes. K. B. H.

Eggs Don't Hatch.

Q.—In January, 1914, W. P. R. eggs were fairly fertile and gave reasonable hatch. From February 1st we had a temperature of 13 degrees below zero, and during the first part of March. Since then we cannot get a hatch, or very poor, if any. The birds seem in good condition, but to date (May 6th) hatches run from nothing to 25 per cent. L. G. B.
Niagara Falls, N. Y.

A.—Birds evidently got very much out of condition during the cold weather. They need abundant greens, not too heavy graining and plenty of outdoor exercise.



The General says:-
Every building on your farm will be a better, more valuable building if you give it a *Certain-teed* roof! The label on
Certain-teed
ROOFING

THE KIND YOU WANT
Birds that are bred right, that look right, that are right.
Wetmore's White Yandottes
were ribbon winners at 1913 *Buffalo Show* winning 1st and 3rd Pullet, 2nd Pen and 5th Cockerel in strong competition. White Wyandottes are superior table fowl and wonderful layers. If you want choice birds to improve your strain or foundation stock, I can supply you.
C. S. WETMORE
ABBOTT ROAD LACKAWANNA, N.Y.

His magic was not far to seek—
He was so human! Whether strong or weak,
Far from his kind, he neither sank nor soared
But sat an equal guest at every board.
No beggar ever felt him condescend,
Nor prince presume, for still himself he bore
At manhood's simple level, and where'er
He met a stranger, there he left a friend.—Emerson.

IT IS A COMMON THING to hear men and women speaking with pride of their blindness of anger when aroused. One claims to be "furiously mad" over every trifling thing and as quickly over it. Another boastfully remarks that he does not mind little things but if any one treads on his toes with intent to hurt, his anger assumes the form of a towering, seething, frothing monster and people make no delay in getting out of his way at such times. How often we hear it!

But why pride in anger? What worth while quality is possessed in wrath? Why should we be boastful of the fact that about every so often we advance the spark up with the gas and allow the machine to run wild regardless of traffic or road conditions? Is it any wonder that disaster so frequently follows in the wake of uncontrolled anger?

The old order of "fight to the finish" is a back number among nations as well as individuals. The real fighting to be done lies within ourselves. Let the good motives drive out the bad, the good deeds crowd out the evil ones. But the old time warring communities are no longer up in arms against their neighbors. They realize that only so long as they help their neighbors, they help themselves. The intelligent classes are aware that it is not man's strength in battle which counts today, but his breadth of mind, his strength of character, his control of self.

The little, weak-willed, impotent ones are wasting their energies on wrathful vengeance against their neighbors with cumulative damage to themselves.

A lesson we all need to learn is that the world's work is wholly team work. A man of clear vision may be able to see the possibilities of his ideas carried into operation but there must be team work to put it there. No one person can be the "whole show" in an undertaking. The success of a play is as greatly dependent upon the minor parts as upon the leading characters in it. There must be a harmonious working of the whole to make a worth while success and this is true of every human undertaking from making pins to uniting the oceans.

Harmony in work among individuals is practically a modern undertaking. The slave drivers of the past will be superfluous adjuncts to accomplishment in the future. The man or woman deemed fit to be at the head of any big undertaking should be able to realize the necessity of consideration for all the workers—not alone the heads of departments but the errand boys and the scrub women (providing

MADISON SQUARE GARDEN, NEW YORK CHAMPION

White Plymouth Rocks

Win all Honors at the National Show, Held at Washington, D. C., December, 1913

Their record is unbeatable, like their superior quality. At this great National Exhibit they won Cock 1-2, Hen 1-2, Cockerel 1-2, Pullet 1-2, Pen 1 and all Specials. **At Williamsport** this season they again made their second great record, and at Cleveland, Ohio, Chicago, Ill., Boston, Mass., Philadelphia, Pa., they have proven their quality and won highest awards and honors over all, including six Championship Specials for Best Bird at these great shows.

Remember This Champion Line made its best records at America's Greatest Show, **Madison Square Garden, New York. They are now better than ever.** We have a great line of stock to select and fill orders with. They have the best of breeding quality and will give absolute satisfaction. Write for my **Special Sales List of Stock.**

Eggs for Hatching from selected matings, made on quality to produce quality. My circular and full particulars for the asking. Write me.

This high-speed MASTER-MACHINE —the New Model

Royal—

has 1,000 working-parts less than others, and need not be "traded out."

AND unless you are *"ROYALIZED,"* you are paying the price of the Royal without knowing it *—besides that of your old-style machine*—in the higher cost of your typewritten letters.

The Royal makes it easy for *ANY* stenographer to turn out *MORE* letters with *LESS* effort in the same working day.

The new Royal Master-Model 10 saves wasted energy and turns "lost motion" into speed, by its new principles of transmitting *DIRECT POWER* that does not have to "turn corners."

By the new Royal way of sending *direct force* from the fingertips to the type, the big FACT of tremendously reinforced manifolding power has been gained.

Get the Facts!

Send for the "Royal man" in your town and ask for a DEMONSTRATION.

Write Direct

for our new brochure, *"BETTER SERVICE,"* and a beautiful Color-Photograph of the *New Royal Master-Model 10.*

ROYAL TYPEWRITER CO., Inc.

Royal Typewriter Bldg., Broadway, New York

we have not become sufficiently civilized to care for these tired-faced, back-bent, gray-haired mothers and grandmothers who toil on hands and knees by lamp light in the evening, or before opening hours in the morning, ever greeting us with cheery good mornings and going about their work uncomplainingly.)

A leader among men must be an individual possessed of an unconquerable courage of his convictions, taking keen joy in his chosen work and able to wisely and harmoniously direct his fellow workers. While conscious of his ability in certain directions, he realizes that he is not greatly unlike other people, and neither condescends or presumes in his relationship with his fellows. Such a leader can conduct a great business on a friendship basis, and it will flourish, for their is truth in the saying that if we cannot make friends by doing business with them, we cannot long do business.

The fact is, there are very few really human folk who are antagonistic at heart. If we could forget the trifles, and overlook, for the time being, the slight tread on our toes, cultivating a certain adaptability in human relationships, the team work of communities, of organizations, of business concerns and especially of families would make a showing undreamed of by people generally.

There is a tremendous amount of energy wasted on petty warring that could be advantageously used to turn the wheels of trade, to beautify the waste places, or in a heart-whole, world-wide effort to free the children and the children's children from the bondage of false teaching and superstition that mankind has labored under, and suffered from, during centuries of time.

Take the cruel and absolutely useless written examination grilling that thousands of children are weighted under during these sizzling June days. Why and wherefore? What the object, and what the result? The teacher with her mind on her work knows without so much as looking over the papers which of her scholars have benefited sufficiently from the year's work to advance. But think of the weary, trouble-hearted youngsters who for some reason or another have been unable to grasp little more than a glimmer of knowledge as presented in the usual dry unattractive way. Examination does not help them. It cannot be claimed to help even those who can answer the questions but it sometimes scares them, and it very frequently teaches them to cheat. Examinations as conducted today are due to be marked off the calendar of events in school life at an early date. The teacher who, by her daily association with them, cannot divine the extent of her pupil's knowledge, thereby incapacitates herself for further duty. She knows that if a pupil cannot successfully cope with examples in fractions in class, he cannot be expected to pass a written examination in fractions successfully, and do so honestly.

RAISE EVERY CHICK on "HEN-E-TA HEN-O-LA" The *Phosphatic*-System!

The more phosphorus in the egg and the more phosphorus in the egg-shell, the greater the fertility, the better the hatch and the hardier the new-born chick.

The Hen-e-ta-Hen-o-la System eliminates all bowel-trouble; reduces mortality to a minimum; grows and develops the chicks faster and cheaper into strong, rugged, healthy "egg-producing" birds.

Ask your dealer or write us for new booklet, entitled: *"The Successful Way to Grow Little Chicks."*

the human element; a mutual helpfulness in business, in schools, in homes—a determination to make the best there is out of the material at hand, and this can only be done by mutual helpfulness and friendship for our fellow workers.

Strawberry Marmalade.
By E. J.

To a pound of washed and hulled berries, add three-fourths of a pound of sugar, and mash them into a smooth mass. Cook slowly until jelly-like and thick, stirring occasionally. Put in small jars and cover with paraffine. This is delicious to serve at breakfast with hot biscuit.

Cherry Sweetmeats.
By E. J.

Wash and pick over the fruit carefully and remove the seeds and stems. Place in an agate lined kettle and bring slowly to a boil. Stew gently for from twenty to thirty minutes when the sugar should be added, allowing one pound of sugar to one pound of cherries. Mix through the fruit carefully but do not mash them or allow to boil again. As soon as the sugar is thoroughly dissolved, fill the jars and seal. Currant sweetmeats made after this rule are most delicious and the coloring is very attractive.

Currant Conserve.
By E. J.

Five pounds of washed and stemmed currants, two pounds of seeded chopped raisins, four sweet oranges and five pounds of sugar. First cook the currants, raisins and sugar together for fifteen minutes after the boiling point has been reached. Then add the grated rind and juice of the oranges and cook for five to ten minutes longer. Gooseberries may be used instead of currants. Good relish to serve with meats.

Raspberry and Currant Preserve.
By E. J.

To two pounds of washed raspberries add three pounds of sugar and one pint of currant juice. Cook twenty minutes, bottle and seal.

Orange and Rhubarb Conserve.
By H. O. H.

6 oranges
2 lbs. rhubarb
½ lb. best layer figs
2 lbs. sugar

Peel the yellow rind from the oranges as thinly as possible and cut this rind in narrow strips with the scissors. Put them into a saucepan with one-half cup of water and boil gently until tender. Then remove the juice and pulp from the oranges, slice the figs thinly, cut the rhubarb in inch pieces and add all, with the sugar, to the orange rind mixture, and cook slowly together until it begins to jelly. Put in tumblers and cover with paraffine when cold.

Fruit Ice Cream.

To make a good fruit ice cream almost any fruit may be used, but the following are recommended: strawberry, raspberry, pineapple, orange, lemon, peach, prune, apricot. About three-fourths of a quart of cream when whipped is sufficient for a gallon of fruit cream. Sweeten the cream according to the amount required for fruit used, and add to nearly two quarts of sweet milk. Add also two envelopes of minute gelatine which have been dissolved in a little boiling water. Have the crushed ice and salt ready for freezing, and turn freezer until the mixture begins to thicken. Remove cover carefully and add nearly a quart of sweetened crushed fruit or juice. Freeze and pack away for an hour or more.

Cantaloupe Split.

Chill the cantaloupes and cut them in half lengthwise, scraping out the seeds. Fill the hollow with vanilla ice cream. Then place the halves firmly together and bind with a tape. Put in a bed of cracked ice in the refrigerator and allow to chill thoroughly. When ready to serve, split with a silver knife, and sprinkle chopped nut meats or crushed fruit over the top. Serve at once.

WILD ROSE FARM
Poultry Dept. St. Charles, Illinois

I remember, I remember
How my childhood fleeted by—
The mirth of its December,
And the warmth of its July.

* * *

On July 4th after you have cared for the chicks, it will be perfectly proper to sizzle off a few fire-crackers.

* * *

Frank Platt has been very quiet lately, in fact, so mum that we begin to suspect it is another matrimonial germ.

* * *

It was very gallant in Editor Curtis to publish that letter complimenting Messrs. Orr and Rigg, we also appreciate their notes, it gives one something to think of.

* * *

According to reports the chicken crop is a rather light one, particularly of early hatched chicks, we are hatching right along and intend to set hens until July 10th.

* * *

The Panama-Pacific International Exposition is going to have an Egg-Laying contest to begin November 1, 1914, and ending October 31, 1915. This contest will be in charge of the Poultry Division of the University of California. Entries close Oct 15th.

* * *

Circulars, blanks and further information can be had from Mr. D. O. Lively, Chief Department of Live Stock, San Francisco, Cal. This will add interest to the great Fair and Poultry show to be held there next year and should receive universal support. Contests of this kind are, we believe, of special value to the fancy as it demonstrates that standard-bred birds are the most consistent layers, the greatest layers and the best layers.

* * *

Received a copy of the New A. P. A. Constitution, while we haven't digested all of it as yet, it does look strong, broad and liberal. The A. P. A. needs just such a document, one that is great and level with no shallow (minded) spots.

* * *

We would like to review this further, but others have the floor and are busy on the job, with still one to hear from, we commend the committee for forgetting some things.

Now let us have a Greater American Poultry Association.

* * *

Arrangements for the Chicago meeting are practically completed and the members who do not attend will sure miss something.

* * *

General Harcombe, of Grand View, N. Y., is spending the summer in Labrador, mail reaches him daily, but none ever leaves as the boats run but the one way.

* * *

We believe that the A. P. A. should allow the Specialty Clubs that are members, the use of its illustrations in their annual catalogues under proper and certain conditions, and we hope that favorable action will be taken at the Chicago meeting.

* * *

The Clubs are all doing good work in educating beginners who in time make worthy breeders and A. P. A. members and they should have the privilege of illustrating their catalogues with the adopted Ideal Cuts of the A. P. A. to show positively the correct and desired outline.

$ 7.16 PROFIT PER HEN

is the amount Director Quisenberry made from 100 hens on the Missouri Poultry Experiment Station last year. $4.58 profit per hen was the average amount he cleared from each of 1,000 hens, or $4,580.00, less the cost of labor. In the correspondence course offered by

The American School of Poultry Husbandry

he will teach YOU how to do the same thing, and GUARANTEE SATISFACTION OR YOUR MONEY BACK. Never such opportunities as now in this "Billion Dollar Industry." Regardless of droughts or floods you can harvest your crop every day in the year "The Quisenberry Way."

"A.S.P.H. Graduates Succeed"

Experience Is a Dear Teacher!

Mistakes cost money! Thousands of people have failed to make a financial success of the poultry business solely because of improper methods due to a lack of reliable information. Don't run the risk of failure when you can absolutely insure success! Any one of a hundred single mistakes you might make this summer would cost you more than a complete course in The American School of Poultry Husbandry.

Special Inducements This Month

Whether you are a beginner or an "old timer," a farmer or a "back lotter," it will pay you to investigate this Course, and to **do it now,** while the special summer rates and terms of **"a dollar down and a dollar a month"** are in force. Remember, The American School of Poultry Husbandry is the only exclusive poultry school in the world. It is unanimously endorsed by the poultry press and by hundreds of enthusiastic students in 43 states and Canada. If you have red blood in your veins—if you have heard the "call of the hen," here is the opportunity of a lifetime to put both feet on the sure road to success in this fascinating and profitable business. SEND TODAY for a free copy of our illustrated prospectus, "Dollars and Sense in the Poultry Business." You'll be glad. Address

The AMERICAN SCHOOL of POULTRY HUSBANDRY
Box 38 Mountain Grove, Mo.

Kettering—I thought you said Rosemary was a strawberry blonde.

Rankin—She used to be; but since purple hair came into fashion, she is a huckleberry brunette.

* * *

Our advice to E. Booth Drevenstedt to get off that heavy stuff had no effect for he is off with heaps of its every week in the American Fancier and it is pretty durn good too. He seems to worry much over those somnambulistic pants of ours and we have decided to will them to him right after the Chicago convention, while Chicago has no board walk, it has a beautiful beach and they also say a canal and tow-path, so we will keep them for emergencies until then.

* * *

We regret that in the A. P. A. a condition seems to exist that a prominent official seeking re-election is obliged to mail out character circulars to refute small talk and base charges as was the case in the last election. This official has been a faithful member and servant of the A. P. A. for years and his election was a glorious victory over unfair and base methods. Let all play fair at all times.

* * *

Lines to John A. Gough.

Blame where you must, be candid where you can,
And be each critic the Good-natured Man.

* * *

"The Cockerel," a neat little sheet issued by the International Poultry Sales Co., Browns Mills, N. J., is a lively cockerel full of vigor and worth careful perusal. Here is one of their hints from the hen: "Be it remembered by all that the very best thing to raise chickens on is common sense."

* * *

Fertility has been unusually good during May and June and we look for a larger crop of the later chicks and greater quality at the later shows.

* * *

The moulting season is due and the fowls need special care and food now. For years we have fed sunflowers, linseed-meal, etc., during the moulting period and with much success, but last year we used French's Poultry Mustard entirely and will for future time to come for it has given us the best possible results, there is nothing like it to grow plumage.

* * *

In another month the show season will be opened by the great fairs, soon to be followed by the poultry shows. There is no good reason why we should not have grand good shows from November first to March first. As it is the show season is entirely too short.

* * *

The poultry associations imagine that unless the show comes between December 15th and January 15th that they are out of the season and the result is that many fail to get the entry they should have, spread out the season and avoid close conflictions and you will receive proper entries and support.

* * *

It is pleasing to know that the two associations of Washington, D. C., have got together and the prospects are very good for having but one association and one show there in the future. Washington has its advantages and there is no good reason why a National Show

E. B. Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Bargain Sale for 1914

Imperial "Ringlet" Exhibition Pen, winning First Prize and Sweepstakes Cup at Madison Square Garden, New York, 1913-1914, and Ckl. heading Second Prize Pen.

Type never told a story of greater values and more sweeping price reductions than in my Special Sale List which is now ready for mailing. This is an opportunity to buy the finest quality Barred Rocks ever offered in America at Special Bargain Prices.

This Is America's Leading Bargain Sale

It is unrivaled in high quality and low prices—This establishment is the largest devoted entirely to the breeding of High Quality Barred Rock in All America. Birds bought now at the prices in my Special Sale List will pay you splendid dividends.

In This Special Sale List

Are listed the finest show birds, the finest breeders in single birds, pairs, trios, and pens that I have ever offered and at the rarest bargain prices. There are lots to meet the needs of all—the beginner who must begin right, the old breeder who will improve his stock, and the show man who wants to win in the strongest competition in the world.

See ad on back cover page for the wonderful record of my Imperial "Ringlets" at last winter's Madison Square Garden 1913-1914 show. This achievement takes rank in history as the most wonderful ever recorded since the New York show was founded.

It Will Be To Your Interest to have this Special Sale List and take advantage of this opportunity to secure "Ringlets" at the cut down bargain prices. Whatever may be your wants in Barred Plymouth Rocks you will find it in my Special Sale List at Bargain Figures: The List will be mailed promptly upon request.

Elegant 70-page catalogue upon application.

EGGS from the world's finest exhibition matings $10 per setting; four settings $35; 100 eggs $60—One-half these prices after June 10th.

E. B. Thompson

Lock Box 510, Amenia, N. Y.

of first importance can't be held there annually. This get-together idea should also prevail in other cities. One show and that a corker should be the desire in all sections and places.

* * *

A Philadelphia doctor lately sent in his bill to a lady as follows:

"To curing your husband until he died $139.49."

* * *

When a man is disturbed by something that annoys some one else, he believes that he is good natured.

* * *

The A. P. A. is unusually well supplied with reformers (we should say knockers) for refer to it in whatever way you wish, some crank will pop up, jab in his chin and try to belittle it, or to make real fun of the association. Some of these no doubt think that they bought the whole association when they paid in their little ten, it is a poor way to get reforms by continually knocking.

* * *

In a great association of this kind with its thousands of members there must be a vast difference of opinion relating to the many important questions that arise almost daily, this is natural and we expect this, but opinions should be well stated without bias, threat or ridicule and let the majority say.

* * *

The trouble is that some expect too much of the association and they fail to believe that there are some things the association "Can't Do." It has its limits of power, and these limits will ever be drawn closer until all members work heart and hand for a greater association and a greater and broader general prosperity and a closer brotherhood between all poultrymen.

* * *

Let all that possibly can meet at Chicago and there resolve upon a just, broad and liberal constitution that all can look upon with pride and in this way build for the future, to which we all owe so much.

* * *

The "Order of the Flea" will hold a special meeting and bite at a date and time to be set later, and during the Chicago convention. There is a new Degree to be worked on "Billy Atherton" who has already made application for more Life Insurance.

* * *

The man who can realize his own limitations is in a fair way to extend them.

* * *

Man's love is a short story, woman's a "Serial."

* * *

July and August hatched Barred Rocks make the winning hens and cocks at the following winter shows. This is also true of other particular varieties.

* * *

Prehistoric. Willie: "Pa, what do they make talking machines of?"

His father: "The first one was made out of a rib, my son."

are now maturing into wondrous beauty among the world famous Aristocrat Barred Plymouth Rocks. This is that sensational strain of birds which set the record of winning at 142 shows all over the U. S., Canada and Europe. Think of it—142 shows. If you need any kind of a **winning** bird at **any** show **anywhere**—write me, stating clearly just what you think you need.

EVERY SHOWBIRD GUARANTEED
W. D. HOLTERMAN, Fancier, Box A, FORT WAYNE, INDIANA

Pacific Coast Department

Conducted by H. H. Collier, Tacoma, Washington.

OUT on the coast we have been very short on poultry judges but at this time we are bringing out new men that we hope will help us tie the blue ribbons in the different shows. One of the new men to shy his castor in the judging ring is Ralph B. Randall, Seattle, Wash. Mr. Randall is not young in the cause like some as he has judged many poultry shows in both England and America. For eighteen years Mr. Randall has bred poultry. Like most of the fanciers he began his career with Bantams. He first bred African Bantams and has gone the limit, having handled most all the different varieties. Like all Englishmen he has shown a fondness at one time for Orpingtons and in his time he bred some good ones. Since the Campine craze came forth Mr. Randall has forsaken all other varieties for the famous Belgium birds and he had the satisfaction of seeing the judges tie several blue ribbons on his coops.

Speaking of poultry Mr. Randall says, "I have had a fondness for chickens all my life and it is hard to say which breed I like the best. I believe that I have a weakness for Leghorns as much as any other fowl but I want to make the Campines a success."

Mr. Randall is sales agent for C. H. Lilly company, a large poultry supply house. He meets a lot of people in the course of a year and gets a good lot of information. Recently he visited Tacoma and I had a very pleasant hour with him talking chickens. The Chinese egg question came up and I was forced to display my ignorance on the subject. I have read a whole lot about Chinese eggs and what they would do for the Pacific coast hens but so far, despite the fact that I am often in the market, I have my first Chinese egg to see. As Mr. Randall makes his home in Seattle where they have imported eggs I asked him what he thought about them as a menace to the Pacific coast hen. He said:

"The Chinese egg has done little to affect the Seattle market. Eggs have not gone lower than twenty cents in Seattle this season and before the cry came up about Chinese eggs, eggs went as low as 18 cents last February a year

JUDGE RALPH R. RANDALL

ago. I saw a shipment of these eggs in a Seattle commission house. They were smaller than our Pacific coast egg. They are generally a dull or brownish color. Some have streaks in them and to the average poultryman he would note a difference at once. Most of those that I saw were small and round. They seemed to have a very hard shell and the membrane in the egg seemed very thick, even that membrane around the yolk was thick and the egg seems to stand up well when broken just like our fresh native eggs. I believe that our native eggs are much thinner in shell than those we find in the east and middle west and I believe that we find the same condition all over the coast. The fact is I believe that our hens lay better and do not make as thick shell as other hens that do not produce the amount of eggs that are averaged here on the coast.

"I do not believe that the Chinese eggs would give us much trouble provided we could have laws passed in the state making the vender of eggs brand them. For instance, I would make the vender of eggs display a sign telling whether an egg was a strictly fresh egg, a case or nearby egg, imported or a cold storage egg. If these signs were displayed then the people would be advised what they were buying and then we would have very little trouble. The people of the Pacific coast believe in good eggs and they would not buy any that they did not believe to be fresh.

"I met a man from China a few days ago and had quite a long talk with him on the egg question. He said if the American people were appraised of the conditions under which Chinese eggs were produced that few would sell in this country. He said that the Chinaman was doing all he could to find a sale for his eggs and that they have established regular egg routes in China that go back from the coast hundreds of miles. These eggs are gathered and often packed on Chinamen's backs for miles in order to get on one of the egg routes where they could sell them. Speaking of the quarters where these eggs are produced my friend

289 Eggs RECORD FOR 1 HEN IN 1 YEAR **212 Eggs** AVERAGE RECORD FOR 10 HENS IN 1 YEAR

In addition to this, my birds won 296 out of a possible 305 firsts last year, 89 specials; 28 silver cups, one A. P. A. Gold Medal, 8 A.P.A. silver medals. Grand Breeders for sale. Send for special sale list. **BARRED ROCKS, COLUMBIAN WYANDOTTES, BLACK ORPINGTONS.**

said that no American would think of eating them if he could see the hens' surroundings."

Mr. Randall has never applied for a judge's license up to this writing as he has been so very busy with his other work that he could not take many show engagements. He has judged a great many shows in his time. He placed his first ribbons at Dartford, England. Has judged Massachussetts, Los Angeles, California, Edmonds, British Columbia, Seattle and Tacoma, Wash., and other shows around the country. He has lived in Seattle about five years, came here from California. He is married and has one daughter.

* * *

The show season for Washington is fast coming around. The Washington state fair this year promises a big poultry show. The writer is superintendent and James A. Tucker, Concord, Mich., will place the awards. The dates of the fair are September 21 to 26. The big Spokane fair opens this year on the 12th of September. William S. Russell, of Ottumwa, Iowa, will place the awards. Mr. Russell will also judge the Tacoma and Grays Harbor poultry shows this winter. Puyallup or Western Washington fair follows the state fair, and W. M. Coats, of Vancouver, British Columbia, will judge. Superintendent Fred A. Johnson promises a big show this season. The Oregon state fair holds forth the same week as Puyallup and Jimmie Tucker will place the awards. Secretary A. L. Merridith, Salem, Ore., would be glad to send premium list to all who are interested. The Salem fair offers a splendid cash prize this year and it will, without doubt, be the big show.

* * *

It is a little hard to write poultry "stuff" that will be good wherever it is read, things being so different here on Puget Sound from any other climate. The month of June has always been a very damp month with us. The days are often warm and the nights cold. Tonight, the 11th day of June, we find a fire in the morning very pleasant and a good bunch of blankets on our beds feel very comfortable. I note by the papers that the middle west has been suffering from heat. This spring has been a fine one for poultry. We had a delightful May. The rains have held off well but are now beginning and last Sunday we had all kinds of rain and it was quite chilly in the evening. It is a funny thing but a fact, our June rains seem to be much cooler than those that we have in May. The sun comes out between the showers and the weather is very pleasant but the cold nights are a little hard on the young chicks.

This season I am trying to raise a big band of turkeys. The first part of the season my eggs did not prove fertile, in fact, the eggs from one of my hens have been exceedingly poor. She is a very old hen, eight years old this spring and perhaps that accounts for the poor fertility. On my new place I have about six acres in trees, the turkeys have all managed to get over in these woods and despite the fact that I made nests for them in the yards (the same as I did on city lots) they have persisted in laying somewhere on the edge of brush heaps. Not wanting the hens to set in the woods I have taken away their eggs and put artificial eggs in the nest but some of the hens will quit the nest and find others. So far only one of the hens has wanted to set and I have hatched most of the eggs with Buff Rock hens. I had two setting on turkey eggs, one on twelve and the other on ten and I hatched all the eggs. That was about three weeks ago and at this writing every turkey is alive and doing well.

I took the two hens with the turkeys and put them in coops. I have a coop for one that is about ten feet long, covered at one end with a shed roof and the other part with two inch wire netting. The other coop is about six feet long built in the same style. These coops were put on good grass and as fast as the hen and young mowed the grass the coops were moved to another place. I kept the hens and turkeys up so they could not get out for the first week and then I put a brick under the corner of the coops, raising the coop up high enough to allow the little turkeys to run where they please but keep the old hen in. This way of handling the youngsters has proved a big success and as I said before, I have not lost one of the lot.

For the feed for the young turkeys I have used commercial chick feed in

R. J. WALDEN Box A MIDDLEBURG, MARYLAND

the morning, boiled wheat at noon and whole wheat in the evening. I find that it is not well to feed turkeys as heavy as one would chickens as they go off their feed much quicker. For a start I give boiled eggs and bread crumbs. For drink I have not used anything but sour milk, some of it has clabbered well before it is fed. They have the run of a big place where there is a lot of native grass, some white clover and different kinds of weeds that seem to be native to this section. The only trouble I have had with this bunch of turkeys is in the evening when I will find one hen with the whole twenty-two and I am forced to go out and divide them up. They have done better this way than with one turkey hen that brought off a cluth of fourteen; she has lost six of hers and has only eight left.

* * *

I am extremely fortunate in the land that I am on. It is a gravel formation. Earth very black, filled with small gravel. About two feet down one strikes a gravel bed and the formation all the way down is gravel and sand. The reason why I know I dug a well 44 feet and the only thing I went through was gravel and sand. This soil drains well and no water will stand any length of time after a rain. In fact if it were not for the grass one would not know that it had rained at all two or three hours afterwards.

I have swale running down at the foot of my land that contains about three acres. This land is a heavy black sandy loam and as a producer of green stuff I never saw anything better. I raise all kinds of lettuce, cabbage and kale. The beans, corn and potatoes all seem to do well. As I am in the center of the woodland, the frost seems to do little harm to the garden sass. Even the beans and potatoes were not touched when several gardens got a good nip about the middle of May.

* * *

I do not believe there is a better feed for either turkeys or chickens than boiled wheat fed once each day. This wheat has swollen as large as it can get. If the turkey or chick can swallow the grain, they find it no trouble to digest it. I had one Buff Rock to reach two pounds and four ounces in ten weeks. This may seem large to some but chicks seem to mature very fast here on Puget Sound. The seasons being short may account for it.

* * *

All of the fanciers are busy raising birds this year for the big San Francisco fair. They realize that they must raise their cocks and hens this season for the next year's fair. Washington will duplicate the prize money won by Washington breeders and this will stimulate the exhibit from this state. Washington expects to take at least twenty-five per cent of the prizes on the breeds exhibited from this state. We are willing to concede the middle west and east a few premiums but do not come out and tell us that you left your best birds at home for if you do, we will keep all of the blue ribbons here on the coast.

Blue Orpingtons Silver Campines

Having finished rearing, I offer my best Blue Orpington eggs—best in the world—at $12.50. Second pen $10 a sitting. Silver Campines, $8 and $5 a sitting. Several sound, healthy breeding pens, cock or cockerel and three hens (Blues), correctly mated, $40 each. Bear in mind—I was the introducer into America in 1911, at the Garden Show, New York, of Blue Orpingtons, and started all the big American breeders in this variety with my stock. Birds and eggs shipped at once on receipt of order. Live delivery in New York guaranteed. I have no representative in America.

Member Advisory Committee, Panama-Pacific Expo., 1915 **Max de Bathe, Hartley Court, Reading, England** Vice-President Poultry Club of England

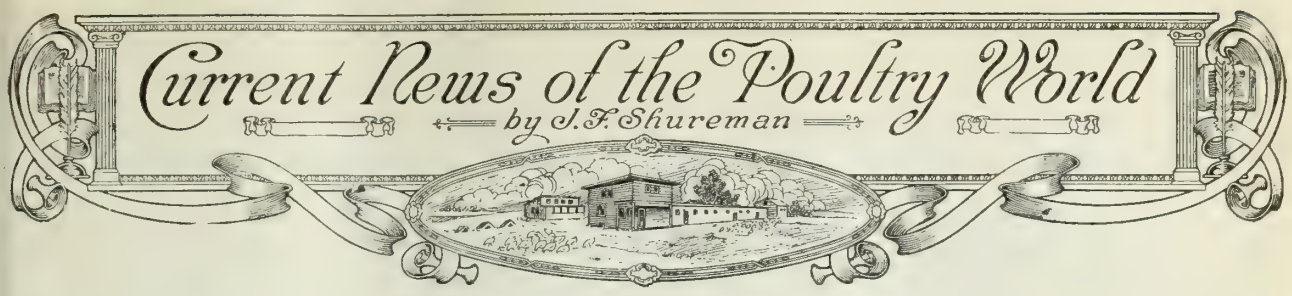
French's Poultry Mustard



The Original Poultry Mustard in America. Absolutely pure and prepared to produce most excellent results. Used and highly recommended by thousands of breeders, fanciers and practical poultrymen the world over.

Feed It During the Moulting Period

Most satisfactory results have been obtained by its liberal and constant use. It stimulates and invigorates. It rebuilds and strengthens lost and waste tissues; It SHORTENS THE MOULTING PERIOD, and starts the hens laying. A fair trial will convince you of its worth. Avoid counterfeits and don't accept substitutes. Insist upon having **French's Poultry Mustard.** Buy it from your dealer, or send to us direct.

Our 32-page booklet giving Mr. Ralph Allen's experiments in England, together with other articles on Mustard and testimonials from prominent poultry raisers is sent free of charge for the asking. Write for this today. Address

The R. T. French Co., Department A **Rochester, N. Y.**

Dr. Hal Halstead has been appointed superintendent of the poultry department of the Alabama State Fair to be held in Birmingham in the early part of October.

Joel M. Foster, wealthy proprietor of poultry farms at Browns Mills, N. J., and Scranton, Pa., who was arrested in Mobile last January in company with his stenographer, Delilah Bradley, charged with violation of the Mann white slave act, was indicted by the Federal Grand Jury on June 3, charged with the offense.

A summer course in poultry culture is being conducted at the Minnesota State Agricultural College at Merriam Park by Prof. A. C. Smith, head of the poultry department, and assistants. The course, which began on June 15 and which will continue for six weeks, is designed to accommodate small poultry raisers living in the cities.

One hundred eggs from four hens in one month, with one hen contributing two eggs the last day, is the reported performance of four Silver Campines owned by C. A. Nichols, of Le Grande, Ore.

Mrs. Martin Carden, of Skidmore, Wis., is the owner of a duck that lays black eggs. The eggs are of the usual size, but coal black. On the tip of the small end of each one is a bluish-white spot. Next!

There are some chickens in New York City—in fact, it is quite a chicken center. The report of the Board of Health, just issued, shows that upward of eight thousand permits to keep live chickens, ducks and geese within the limits of the big city are issued annually.

The penalty for stealing poultry in Massachusetts is now a fine of $200 and imprisonment for a term of two years, no matter whether one bird or a hundred are stolen. Before the new law was passed, the penalty was only a five-dollar fine. It doesn't pay to steal poultry in Massachusetts now and get caught at it.

Frank G. Perrin, well known attorney and poultry fancier of Media, Pa., lost his chicken house and 150 fowls by fire early in June. The fowls were Rhode Island Reds and Mottled Anconas, many of them being prize winners at the big eastern shows. The origin of the fire is a mystery.

With one hand entirely gone and the other minus four fingers, Lee Worman, of East Columbus, Ohio, will engage in the poultry business. To make this possible, the State Industrial Commission gave him a check for $3,646 a few days ago and will pay him $9 a week during the balance of his life. Worman met with an accident while working for the Ralston Steel Car Co. He will purchase a tract of land, erect modern poultry buildings and engage in the poultry business. This is the first time in the history of the State Industrial Commission that it has allowed in a lump sum any amount for total permanent disability.

New freight tariffs proposing to increase the ratings on live poultry in carloads from fourth to third class, between points in Colorado, Utah and other Western states and the Eastern markets have been suspended by the Interstate Commerce Commission to August 29. The commission will conduct an investigation into the reasonableness of the advances.

The Arkansas Branch of the American Poultry Association has adopted a resolution asking the Arkansas Press Association to favor the passage of an act by the next legislature providing for the appointment of a State Board

American Poultry Association

The poultry industry of this country amounts in the aggregate to one billion dollars per annum. These figures paralize the imagination.

The American Poultry Association is the largest live stock organization in the world and its membership is increasing with tremendous rapidity. On its roll are the leading breeders and representative poultrymen of Canada and every state in the union.

Every breeder, fancier, man and woman in the United States and Canada who is interested in poultry of any kind should join this great organization.

The American Standard of Perfection

The Standard of Perfection is the official guide for the breeding, mating and judging of all poultry. It gives a close and detailed description of every breed and variety of chickens, ducks, geese and turkeys, with illustrations from living models. This book is published by the American Poultry Association at an enormous expense and is the American authority. You can not raise poultry successfully without this American Standard of Perfection. Prices postpaid from the publishers of this paper. C'oth binding, $2; leather binding, $2.50. Send all orders to American Poultry Journal, 542 So. Dearborn St., Chicago, Ill.

On its shoulders rest this gigantic Billion-Dollar Industry.

Your interests will be promoted and safeguarded. You may compete for the association diplomas and gold and silver medals at the shows, and be entitled to all the help that honest organized effort can give you.

You will have a voice in shaping the course and policy of the association. Making it recognized by nations and governments. Your name should be one of the thousands of the honored members of this association. We urge you to write immediately for information and application blank. Address

E. B. THOMPSON, President, Amenia, New York
S. T. CAMPBELL, Secretary
American Poultry Association, Mansfield, Ohio

of Poultry Husbandry, whose duty it shall be to establish a state poultry experiment station in Arkansas similar to the one at Mountain Grove, Mo.

A. G. Goodacre, president of the Long Beach (Cal.) Poultry Association, is introducing English pheasants into Southern California and announces that he expects to revolutionize the poultry industry of that section of the country.

The following officers were chosen at the recent election of the South Dakota Branch of the American Poultry Association: President, William Scallin, Mitchell; first vice-president, R. H. Borrey, Sioux Falls; second vice-president, John Noit, Mt. Vernon; secretary-treasurer, W. C. McConnell, Sioux Falls; executive committee, H. P. Larson, Beresford, and Mrs. Mattie Webster, Woonsocket.

Harry Collier, the well-known poultry breeder and judge of Tacoma, Wash., has been appointed superintendent of the poultry department at the Washington State Fair. Mr. Collier has held this position fifteen times in the past, so this will be his sixteenth administration in this capacity.

A hen belonging to William Grubb, a poultry farmer near Exeter, Pa., recently laid an egg that resembles a calabash.

Exports of poultry from New Orleans to the Bay Islands, Central and South America, have been large this season. Bruce Brothers alone shipped more than five thousand White Leghorns, while a number of other poultrymen have made smaller shipments.

A peculiar disease recently attacked the small chicks belonging to Mr. and Mrs. Arthur Silvey, of Bowling Green, Ind. Within a period of thirty-six hours they lost between eighty and ninety chicks.

Prof. Bittenbinder, of the Iowa State Agricultural College at Ames, has been assigned by the dean of the college to take charge of the poultry show to be held in Hopkinton, Iowa, in November.

J. C. Fishel, the well-known White Wyandotte breeder of Hope, Ind., has been appointed postmaster of Hope.

In compliance with instructions received at the meeting of the American Campine Club, held in Philadelphia last December, there have been prepared and filed with Secretary S. T. Campbell, of the American Poultry Association, petitions asking for the admission to the Standard of both the Golden and Silver Campines. These petitions will be acted upon at the August meeting of the A. P. A.

Miss S. Carey, the well-known lady poultry breeder of England, has been made a member of the advisory committee from England at the Panama-Pacific Exposition to be held in 1915. She will endeavor to get a representative exhibit of English poultry for the poultry show to be held in connection with the exposition.

What is claimed to be the largest consignment of Chinese eggs landed thus far at American ports reached Vancouver, B. C., recently. The shipment is said to have consisted of 6,792,260 eggs, most of which were consigned to points in the United States.

Frank C. Hare, formerly of Quincy, Ill., but now United States poultry demonstration agent, has been working in South Carolina for several months and has organized boys' and girls' poultry clubs in several of the counties. Until recently most of Mr. Hare's work was among the adults.

To stimulate interest in the matter of raising high-grade poultry throughout the state, joint plans have been made by the Montana State Board of Poultry Husbandry, the State Poultry Association and the Montana Branch of the American Poultry Association, by which every beginner in the chicken business will be given a pure-bred cockerel. In order to take advantage of this offer, the beginner must agree to devote at least three years to raising high-class fowls.

Bargains.

Any of our readers who are looking for some bargains in breeders, young and yearlings, in White Wyandottes, White Rocks, White Leghorns and R. I. Reds, will do well to correspond with W. R. Curtiss & Co., Ransomville, N. Y. They are also offering some excellent Pekin, Fawn, Pencilled and White Runner Ducks at reasonable prices. Eggs and chix for roasters selling very cheap now. They also handle cut clover and supplies. Now is the time to fill your wants and this concern will treat you right. Why not send them your orders? Satisfaction guaranteed or money refunded.

Penciled Runners Have Fulfilled Conditions.

Notice is hereby given all interested breeders that the Cumberland White-Egg Indian Runner Club has filed with the secretary of the American Poultry Association all the required papers for the admission of the Penciled Runner to the American Standard of Perfection, in due form. As far as is now known to it, the Cumberland Club is the only group of Runner breeders to have filed all the required papers.

The magnificent carriage, type and gait in Runners recently shown in New York and other eastern shows by both American and English breeders will forever set at rest the question as to true Runner quality. It is confidently expected that the Runner Ducks will now enter upon an era of progress and conquest such as has never before been known. With the best egg and the best flesh of any known domestic fowls, and with harmony prevailing among all who desire the best good of the best Runners, their future course should be straight onward and upward continuously.

C. S. Valentine, President.

Forest City Fair.

The Second Annual Forest City Fair Poultry Show will be held August 20 to 27, 1914, at North Randall, Ohio, suburb of Cleveland, America's sixth city. The management is so encouraged by the support given them by the fanciers at their inaugural exhibition last year that they are planning for even better things this year.

This event opens the season of America's great shows, consequently it will be attended by scores of eager buyers seeking winners for the shows that are to follow.

Over $60,000 is being offered in cash premiums at this fair and an unusually liberal proportion thereof is allotted to the poultry show. In addition, handsome ribbons will be awarded all prize winners.

Very keen interest is being shown in the Hamburg class owing to the fact that the Ohio Hamburg Fanciers' Club will hold a special meeting in connection with this show, and through its secretary, Ira M. Farber, Sandyville, Ohio, is offering a number of valuable cash specials to be competed for by its members.

Shepard Strong will again have charge of this show, thus insuring fair and courteous treatment to all exhibitors and proper care of all specimens and safe delivery of same to express companies for return shipment. Intending exhibitors should make note of the fact that each one of the four thousand birds on exhibition last year was returned to its proper

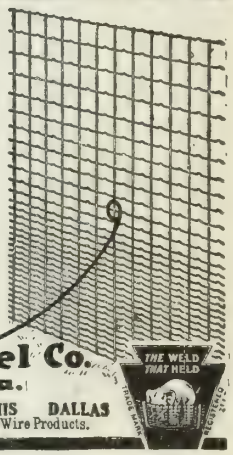
"PITTSBURGH PERFECT" CHICKEN AND RABBIT FENCE



Indispensable to all poultry raisers, large or small. The closest-meshed fence of its kind in the world. The horizontal wires in the bottom portion of this fence are only 1 inch apart, the upright wires being 4 or 6 inches apart, as desired. Affords *perfect protection* against all prowling, destructive animals, while the smallest chickens can't squeeze through.

The strongest, most durable chicken fence, because it is made of heavy gauge Open Hearth wire, heavily and thoroughly galvanized. Wires at every contact point are WELDED BY ELECTRICITY, making a *one-piece fabric*, easiest to string. No top and bottom boards required. Fewer posts needed.

SOLD BY DEALERS EVERYWHERE

———o———

Fred B. Keifer, Marshall, Ill., state secretary of the National White Wyandotte Club, would like to hear from every breeder of this popular variety who is not now a member of the club. Special inducement to get you interested. Join the club and help make Illinois the banner White Wyandotte state.

———

On April 18, 1914, the final meeting of the West Haven, Conn., Poultry Association was held, at which time the members voted to disband, owing to the fact that after having given one of the largest and best exhibitions in the history of the association, the members were astounded to discover that, through the incompetency and extravagance of an official in whose hands the affairs of the association had been placed, the association had been forced into bankruptcy and compelled to disband.

———

The Terrebonne Parish Fair will hold its Second Annual Poultry Show October 8-11, 1914, at Houma, La.. Judge F. J. Marshall, College Park, Ga., will place the awards. The handsome A. P. A. ribbons will be awarded at this fair. Cash specials for Black, White, Buff and Particolor varieties; $20 for grand champion pen, $10 for grand champion male, $10 for grand champion female. Other specials and cups. For catalogue and entry blanks address F. X. Bourg, Sec'y, Houma, La.

———

The Williamsport Poultry, Pigeon and Pet Stock Association have selected as dates for their 1914 exhibition, Nov. 17 to 20, opening on Tuesday and closing on Friday. This will make their show come one week earlier than it has for several years past, and they trust that all their old exhibitors, as well as prospective exhibitors, will take notice of the dates and get their chicks out accordingly. They feel that in their judges they are not surpassed by any show in the country and that all exhibitors will be pleased to learn that Henry P. Schwab, Richard Oke, Charles Nixon, J. C. Punderford and F. I. Bradford have been selected as the judges. This season they will make an entirely new mailing list, and ask all prospective exhibitors to write for premium list. James T. Huston is president of the association, but address all communications to the secretary, George J. Hanks, 35 West Fourth Street, Williamsport, Pa.

———

At the recent annual meeting of the White Plymouth Rock Club, the following officers were elected: President, Chas. H. Ward, Bethel, Conn.; secretary-treasurer, Martin F. Schultes, Bartlett, Tenn.; executive committee: Dr. L. D. LeGear, St. Louis, Mo.; Geo. H. Hilderbrand, Meadville, Pa., and U. R. Fishel, Hope, Ind. Dues are only $1.00, which includes the application fee, and should be sent to the White Plymouth Rock Club, Albashire, Bartlett, Tenn.

———o———

Of Interest to Local Associations.

The management of the Great Coliseum Exhibition have decided to offer a special that should in the right way encourage local associations to exhibit under the name of their associations. For the season of 1914 a special of $25 will be offered for first and $20 for second, to the breeders of local associations making the largest win, according to Rule 15. The entry blanks that go out this year will have at the bottom a blank line for each exhibitor to give the name of his association. This will be entered on the books of the secretary, and at the close of the show every award made on every breed or variety, Standard or non-Standard, will be credited to these associations, and the association winning the greatest number of prizes will be awarded the $25 and the one winning the next greatest number will be awarded the $20.

It would certainly be a credit to any association to be able to advertise to the world that their members won at this show more prizes than any other association. It is open to the world and costs absolutely nothing, as the same cash specials will be offered on all varieties as heretofore.

The Great Mid-West Poultry and Pet Stock Association have introduced more good and novel features in Poultry Show management than all the other Poultry Shows in the country combined. We feel that it is up to us to encourage local shows and we think of no better plan than to offer these specials.

———o———

It is a good plan to run several hens with each flock of pullets. These will have had their lessons at laying eggs, and will put the young pullets through their pupilship. Select those hens that are ready to lay and are in fit condition.

Factory of the R. T. French Co., Rochester, N. Y.

This mammoth factory, with upwards of five acres of floor space, is the largest mustard factory in the world. It is the home of French's Poultry Mustard, the original poultry mustard in America. Year by year this great factory has been increased to supply the ever growing demand for their goods. The name "French" is an absolute guarantee of quality and this applies to their poultry mustard as well as to their full line. French's Poultry Mustard has proven its worth and has given results to the users. It does all they claim for it; it is a healthful stimulant that assures results. The R. T. French Co. have now in preparation a new book on Poultry Mustard which is mailed free for the asking and which will be of great interest to all poultry raisers.

From the first when French's Poultry Mustard was first put on the market we have been pleased to recommend it for personal use, and experiments have been highly satisfactory.—H. P. Schwab.

Owen Farms Birds.

Maurice F. Delano, proprietor Owen Farms, 107 Williams St., Vineyard Haven, Mass., desires to call special attention to his advertisement in this issue. Look it up, see the special offer he makes to all American Poultry Journal readers during July. He can supply you with birds in Buff Orpingtons, White Orpingtons, White Plymouth Rocks, White Wyandottes and S. C. Rhode Island Reds to win at the early fall fairs. They are January and February hatched and will be in excellent condition to enter in hot competition at leading fairs. Mr. Delano will also have a few early moulted cocks and hens in all varieties ready to win for you. All adult birds sold during July at just one-half the price they would have brought prior to the breeding season. Mr. Delano wants your order and guarantees to satisfy you or refund your money. This is certainly fair enough and we urge our readers to write at once for prices and further particulars. Don't forget to refer to his ad in this issue. You can save money by ordering your show stock now. Mention American Poultry Journal when writing.

How to Save Time, Labor and Money.

More poultry raisers are learning every year that they can save time, labor and money, as well as worry, when it comes to building and making the fixtures for their poultry houses. The factory made, ready built poultry houses and equipment solve the problem for poultry keepers, for they not only can buy better made, better arranged and more completely equipped houses, but the cost of such houses and equipment is less than the cost of material and labor for building. This making of portable poultry houses and hennery outfits of all kinds has been worked out to a science in manufacturing plants and that is one reason why such well built houses can be furnished at low prices. Better material is also used because it can be bought in large quantities, and in cutting up hundreds of pieces all defects are cut out of the lumber. All the worry and valuable time required for planning and building is done away with when you buy a portable building because the work has all been done at the factory. Any poultry keeper can order almost any size made up all complete ready to set up in a few hours.

SHOW BIRDS - from 15 EGGS per sitting - from 5
ALL VARIETIES OF WATERFOWL, PIGEONS, FANCY FOWL SUPPLIED TO ORDER
Utility or exhibition poultry or duck farms stocked on profitable lines; advice on management free. Contracts accepted for teams to exhibit at any show or for private collection of birds in any specified color or breeds. International collections of feathered fowl from all or anyone country.
Ten years ago the business commenced in a tiny yard on the East Coast of Lincolnshire, England, today I hold with a varied export trade all over the world with head offices in one of London's principal thoroughfares from where the trade can be more promptly dealt with, and have probably shipped more winners of the blue to America during the last four years than the majority of the other breeders put together. Our method is to give full value for money and win satisfied customers. I have now in some breeds a greater demand than can be supplied and importers are advised to inquire early. 1914 show birds will be ready from August onwards, only address
TOYNTON, SPILSBY, ENGLAND Cable—Carey, Spilbys

ognized as the foremost and largest manufacturers of up-to-date portable poultry houses and equipment, and that firm is Potter & Co., located at Downers Grove, Ill. For over thirteen years they have been manufacturing poultry houses and equipment of all kinds for poultry keepers and they number among the thousands of satisfied customers some of the largest and best equipped poultry plants in the country. Aside from the portable poultry houses which they make, they also specialize in portable hennery outfits which make a complete equipment for any poultry house. A portable hennery outfit consists of roost, dropboard and nesting system and is the most complete and sanitary hen house equipment to be had.

This company also makes a full line of feed hoppers, brood coops, fireless brooders, etc.

Any of our subscribers who are needing portable houses or poultry equipment of any kind are urged to refer to the ad of Potter & Co., in this month's paper and send for their large catalog, enclosing 4 cents in postage for mailing of same. Their address is P. O. Box F-21, Downers Grove, Ill.

1st Cockerel, Madison Square Garden, 1913

Head of 1st Pen Philadelphia

Summer Sale of Rancocas Stock

Rancocas have in their breeding yard over sixty birds that have won at such shows as Madison Square Garden and Palace Show, New York City, New York State Fair, New Jersey State Fair, Boston, Philadelphia and Hagerstown. We have hundreds of early chicks bred from them that are coming on splendidly. We propose for the first time in the history of the farm, to hold a summer sale, and to offer at reduced prices some of our record birds, together with 200 other choice specimens.

This will be an unusual opportunity to secure White Leghorns and White Rocks that have won national fame. The sale will include White Leghorn males that have won as follows: First Cock at Philadelphia, 1912; First Pen Male at Philadelphia, 1911; First Pen Male at Boston, 1913; First Pen Male at Madison Square Garden, 1910; and such famous White Rock males as Second White Rock Cockerel, Boston, 1913; Third Cockerel at Madison Square Garden, 1913; Fourth Cockerel at Madison Square Garden, 1913, and Fourth Pen Male at Boston, 1913. This sale will include many other record birds and choice breeders. Write for our summer sale catalog.

RANCOCAS POULTRY FARMS
Box 510 Brown's Mills, N. J.

Twenty-five Years in Business.

There are but very few poultry breeders in this country who can boast of being in business as long as C. C. Shoemaker. There must be a reason when a firm can survive the ups and downs of a business of such peculiar nature as the poultry industry.

Their remarkable growth and great sales record could only be made by delivering the goods, and that they do it in fullest measure is proven by the thousands and thousands of testimonial letters on file at their office.

Just now they are offering in their half-page advertisement on another page eggs at reduced prices, some of them at less than half the original spring prices and from the same pens from which they sold the eggs in the earlier part of the season.

It is not too late for hatching purposes, and good healthy chicks can be hatched and raised during July and August and even as late as September. If you have never tried it, it will pay you to take advantage of the remarkably low prices for high-class eggs which they are offering.

Address C. C. Shoemaker, Box AB, Freeport, Ill.

Hartford, Wash., Sept. 4.

Mr. C. C. Shoemaker, Freeport, Ill.

Dear Sir: I hatched 23 chicks out of 26 R. I. Red eggs, having kept the eggs ten days before I could place them under incubation. These chicks are beauties. You will get some more orders within a short time. I like your way of handling orders, as you are very prompt. Yours very truly,

James Sherwood.

Yonkers, N. Y., Sept. 15.

Mr. C. C. Shoemaker, Freeport, Ill.

Dear Sir: I received the two sittings of Barred P. Rock eggs, and not one egg was broken on arrival. I now have 23 of the nicest little chicks you ever saw out of 26 eggs, which is an excellent hatch.

Yours very truly,

Edward Randall.

Glencoe, Minn., Aug. 8.

Mr. C. C. Shoemaker, Freeport, Ill.

Dear Sir: I must let you know that I have ten chicks out of 12 eggs of the B. P. Rocks, and am certainly well pleased with them. One egg got crushed so only had the 12 eggs to incubate. Yours very truly,

Mrs. E. Tucholke.

———o———

Louisville, Ky., Nov. 21, 1913.

H. I. Co., Salem, Va.

Enclosed find $1.00 in payment for bottle of "Oculum" sent me in November, 1913. I have waited this long in paying because I wanted to see what it would do for my chicks, as I have been losing 50 per cent and more every spring and was about ready to quit trying to raise them until this spring. I wrote you for your remedy and used it as directed (that is, injected it) and have only lost four chicks to date out of 100 chicks, and as the eggs have always been strongly fertilized, and have used the same methods of hatching, I am forced to admit that "Oculum" did it.

Thanking you for waiting on me so long, I am, Yours very truly,

J. Albert Lloyd,
1015 Sylvia Ave.

STATE OF NEW YORK)

Subscribed and sworn to before me this 9th day of June, 1914.

Joseph Acritelli,
Notary Public, Ulster Co.

Granock Farms, Stewart Haddock, Proprietor, Poughkeepsie, N. Y.

The Granock Farms S. C. White Leghorns have characteristics all their own, combining beautiful form with size and absolutely pure white plumage; there also is their winning quality and records made in the past prove their worth. This past season we were particularly pleased to see this line shown at the leading shows and at each winning consistently, at the great Grand Central Palace New York Show, Buffalo, Boston and Philadelphia.

While we regret that we haven't at this time a complete list of their winnings at hand, we know enough of them to assure our readers of their quality, fit to be seen in any company. At the late Philadelphia show, Mr. Haddock, beside winning first pullet, was also awarded the medal for best pullet in the entire show, and we also believe he won a similar special at Buffalo. Both were large, strong classes with royal competition.

We expect later to visit this farm and will then attempt to do justice to this line by telling our readers all seen there.

Mr. Haddock is now offering at special prices a share of his breeding stock for sale. Those in want of reliable stock no doubt will be interested. Write him for prices and for particulars, and always mention the A. P. J.—H. P. Schwab.

Only Slowly Made Roofings are Slow to Wear Out

We do not trust to bought felt—the foundation of roofing—we make our own from all-rag fibre, no cheap stock.

Asphaltums, good and bad, *look alike.* Trained chemists select ours and blend them to stand torrid heat and Arctic cold.

We give ample time to tests and inspections at every step of manufacture. That is why Neponset Paroid wears so long, is so truly economical, resists sparks and embers.

Surely send for our ROOF BOOK—free.

NEPONSET
PAROID ROOFING

BIRD & SON (Est. 1795)
541 Neponset Street, East Walpole, Mass.
Also makers of Neponset Shingles, Wall Board and Building Papers

CLASSIFIED ADS

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and **five cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. **All copy for Classified Ads must reach us by the 17th of month preceding date of issue.**

DR. PRINCE T. WOODS' NEW BOOK

How to Raise Chicks

INCLUDING REVISION OF "FACTS ABOUT WHITE DIARRHOEA"

A down-to-date manual on breeding poultry, getting hatchable eggs, incubation and brooding both natural and artificial, preparing chick foods, feeding chicks, how to raise chicks and how to avoid and prevent disease and losses. Told in plain language. Illustrated with reproductions from photographs and pen drawings. Tells how to make your own brooders and chick foods. Written by a man who knows how and how to teach others. 88 pages, 35 illustrations and 5½x8 inches in size. Printed on good paper. Well and durably bound in cloth.

A Book for Everybody Who Keeps Fowls or Grow Chickens Whether Beginner or Old Timer in the Field of Poultry Work

It has ten chapters: Chapter I—Selecting and Mating Breeding Stock. Chapter II—Food, Vegetable, Animal and Mineral. Chapter III—Fowls and Food. Chapter IV—Care and Management of Breeders. Chapter V—Eggs for Hatching. Chapter VI—Incubation, Natural and Artifical. Chapter VII—Brooding with Hens and with Brooders. Chapter VIII—Chick Foods and Feeding Chicks. Chapter IX—Growing Chicks. Chapter X—Facts About White Diarrhoea. What white diarrhoea is. Symptoms of disease. Causes. Is there more than one form? Has germ of specific disease been found? Infection. Prevention. Treatment. Formula for a simple remedy which has proved effective in many cases in many climates for four years.

Here is a book devoted to chick comfort and to more and better chicks, 75 cents per copy postpaid. Learn to save your chicks; that means more profit; Dr. Woods tells how; send for the book now, only 75 cents, cloth bound.

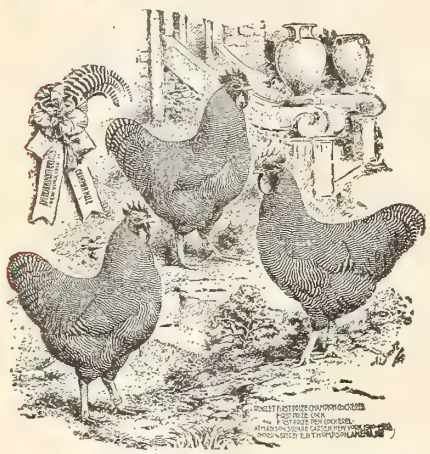
E. B. Thompson's "Ringlet" Barred Plymouth Rocks

Eclipse all former achievements and win the most brilliant record of their time at Madison Square Garden, New York, this Winter of 1914, winning as follows:

ALL RIBBONS ON COCKERELS, namely, first, second, third, fourth and fifth prizes.

First and fourth on Cocks.

First, second and fourth on Exhibition Pens.



The Imperial prize of the show, Sweepstakes Special for Champion Male.

Medallion for Champion Cockerel.

Diploma presented by the American Poultry Association for Best Cockerel.

Spec'l for Best Shaped Male.

Spec'l for Best Colored Male.

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York.

Silver Cup for Best Plymouth Rock hatched in 1913, male or female, any variety.

Specials presented by the President of the American Barred Rock Club for Best Cockerel and Best Pullet.

Three Best Cockerels; Best Display; Best Collection.

Silver Cup presented by the New York Sun for best Cock, Hen, Cockerel, Pullet and Pen.

Sweepstakes Silver Cup for Best Exhibition Pen.

The Association $25 in Gold for Best Display.

All Silver Cups and Cash Specials.

Three times as many first Prizes as any Barred Rock Exhibitor.

More First, Regular and Special Prizes than any Exhibitor of any breed.

My exhibit was the most illustrious ever presented to the world —every winning feather was bred on my farm.

The amazing record of **1st, 2nd, 3rd, 4th and 5th prizes** on Cockerels—every Regular and Special Prize offered—stands unmatched in the history of Madison Square Garden. It is unequalled. These cockerels and hundreds of their brothers on my farm are beyond comparison—they are the Finest in the World.

If you want to win and breed winners you must have my Imperial "Ringlets."

They are the standard by which all other Barred Rocks are judged. The great twin records at Madison Sq. Garden, N. Y., 1913 and 1914—two years in succession—spell **Imperial "Ringlet" Supremacy.**

F. E. HARRISON'S ARISTOCRATIC
ROYAL RED S. C. R. I. REDS

Are the acknowledged champions by virtue of a show record unequalled by any competitor.

In the last two Chicago Coliseum Shows, 1912-13 and 1913-14 (note the dates), Royal Reds won nine out of a possible twelve firsts , competing with seventy-four competitors, none of which won more than one first.

In addition to this, in these two great shows, Royal Reds won five seconds, four thirds, three fourths, and two fifths, and three times as many color specials, shape specials and championships as all other competitors combined, and best display at both shows. Think this over.

Catalogue free for the asking.

BEST by CONTINUOUS TEST

Is The Unbeatable Record of

Tecktonius-Reed Strains

R. C. S. C. Buff Leghorns

S. C. Rhode Island Reds

An occasional winning fowl, or pen, is not unusual; many breeders produce them, but that don't make a WINNING STRAIN, any more than a "swallow makes a summer". Producing a strain of birds that **sweep the boards** in the big Nat'l Laying Contests and Exhibition Arenas—not ONCE, but YEAR AFTER YEAR—is the unbeatable achievement of **Tecktonius-Reed** "Buffs" and "Reds", in competition with all popular breeds—against America's foremost breeders. This unequalled breeding and exhibition record proves "Tecktonius-Reed's" **breeding methods** to be scientific, and and their strains of "Buffs" and "Reds" to be a dependable foundation upon which poultrymen can rear a brilliant poultry success. Hundreds are doing it today; why not you?

Note Our Attractive 1914 Offerings

Choice of three Varieties (R. C. and S. C. Buffs—S. C. Reds) with Each

Utility Stock	Exhibition Breeding Stock	Exhibition Show Stock	Special Pullet Offer
Good breeding Cockerels $3 and $5 per head. Good breeding Trios, or Pens, $10 and $15.	Hens or Pullets—$5, $8, $10, $15, $25 per head. Cockerels—$10, $15, $25, $50 per head.	Pens—high quality—$50, $75, $100.	Eleven **April Hatch** Pullets—excellent value—mated to a good, vigorous Cockerel $15.00

NEVER BEFORE HAS OUR OFFERING been of such high quality—never before was your chance for making a "a ten strike" in poultry raising as good as now. In National Laying Contests—1912—our Buff Leghorns led with high average of 249½ per pen—201 for individual hen.

"Tecktonius" Strain of "Buffs" carried of first exhibition honors for 8 years at Chicago, New York, Boston, Philadelphia, Baltimore, St. Louis, San Francisco, Kansas City, Indianapolis, Cincinnati, New Orleans, Memphis, Des Moines, and scores of lesser shows. Your success as a breeder—as an exhibitor—will be assured with a **Strain** backed by such an array of continuous triumphs. Send us your order today.

Tecktonius & Reed Buff and Red Farm

ROUTE 7 **RACINE, WISCONSIN**

Prepare for Fall Fairs

Manufacturers of "Pittsburgh Perfect" Brands of Open Hearth Steel and Wire Products.

Capacities, 1,200 to 20,100 Eggs
(Sectional Construction)

The one money-making, labor-saving hatching machine is the Hall Mammoth Incubator—the original and standard. As a producer of poultry profits and satisfaction it has no equal.

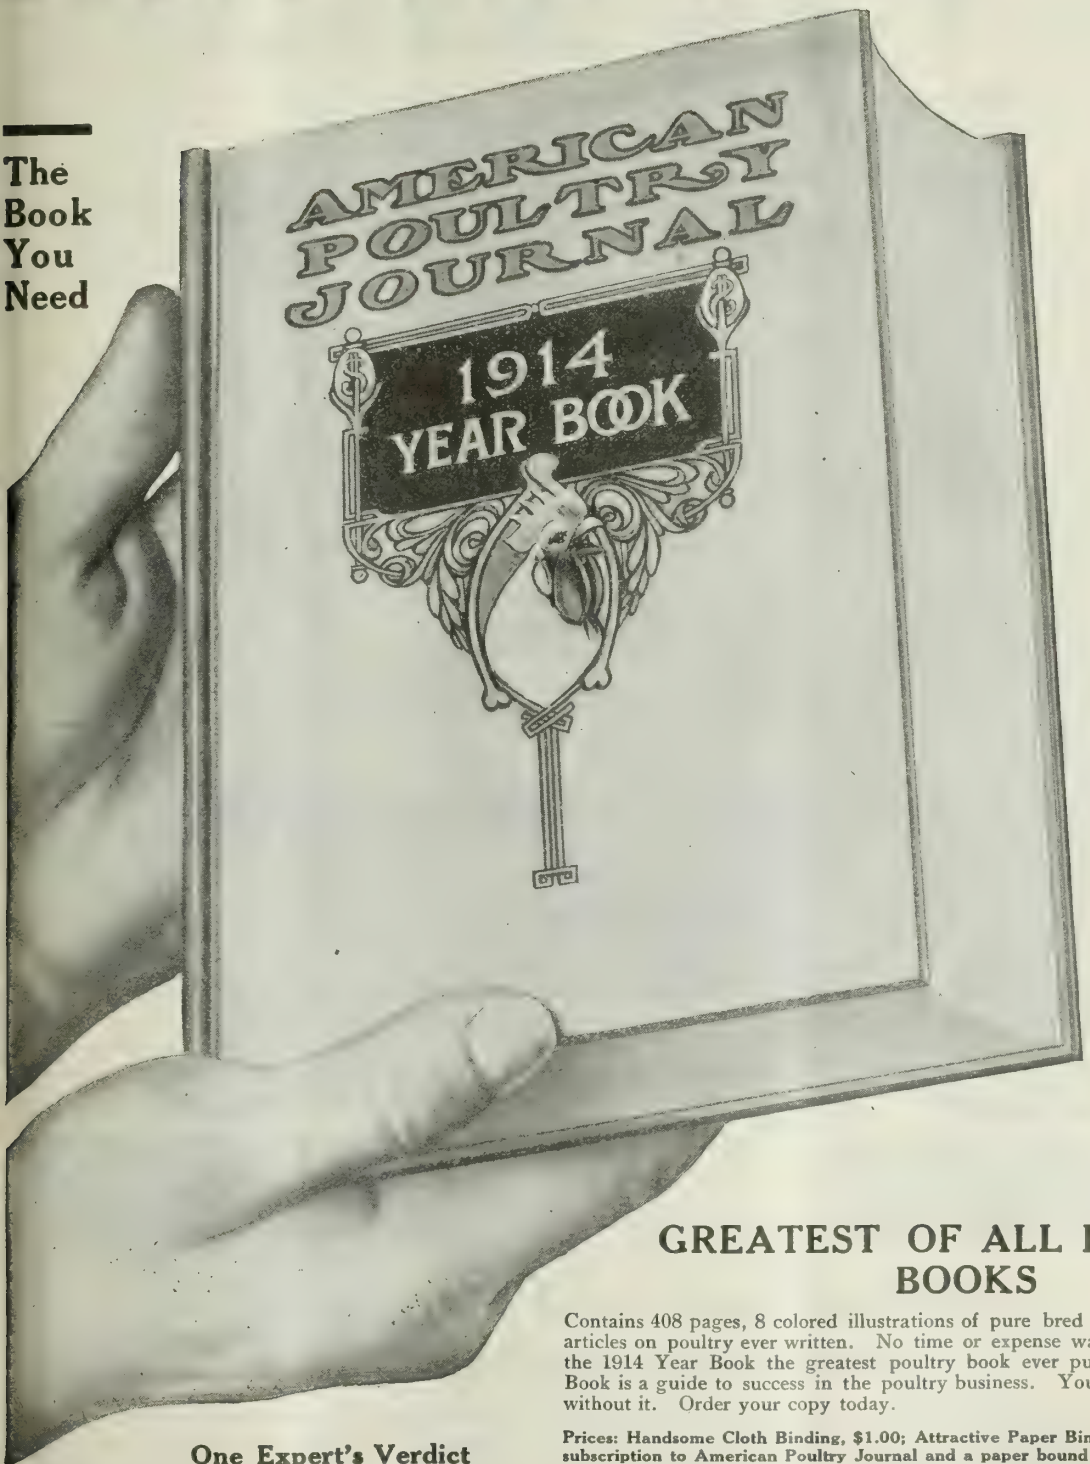
The Hall practically costs you nothing. Wise users figure that it pays for itself by giving extra profits in larger hatches of the strongest, liveliest chicks or ducks. The low death rate of Hall-Hatched Stock makes it worth more and cost less.

Weber Brothers, the famous growers of Pekin Ducks, Wrentham, Mass., whose Hall Incubator capacity is 16,200 eggs, after using Mammoths of two other types, write under date of June 24th, 1914:

"We are pleased to recommend the Hall Mammoth Incubator in every particular as the most reliable hatcher we have ever used. During the present season our hatches run 71% to 85%. We shall double our capacity, and you may look for our order when the rush is over."

WEBER BROTHERS.

How big is your cellar? What size Incubator can you use? Do you want Ideal cellar plans? Our Service Specialist will call and help you, if you request.



THE HALL MAMMOTH INCUBATOR CO.

132 Southern Avenue **Little Falls, N. Y.**

Here It Is—for You

The Authentic Review of the Poultry Industry for the Past Season

The Book You Need

The Book You Want

Contains 408 pages, 8 colored illustrations of pure bred fowls, and the best articles on poultry ever written. No time or expense was spared in making the 1914 Year Book the greatest poultry book ever published. The Year Book is a guide to success in the poultry business. You can't afford to be without it. Order your copy today.

Prices: Handsome Cloth Binding, $1.00; Attractive Paper Binding, 50c; or 1 year's subscription to American Poultry Journal and a paper bound Year Book for $1.25; 3 years' subscription to American Poultry Journal and a cloth bound Year Book for $2.50.

Your money back if you are not satisfied.

American Poultry Journal Pub. Co. 542 S. Dearborn Street CHICAGO, ILLINOIS

One Expert's Verdict

Gentlemen: Your 1914 Year Book has just been received. This, I find, is a valuable book, much more so, in my opinion, than the one which you issued last year. I find it crammed full of valuable information from cover to cover. Yours very truly, T. E. Quisenberry, Director Missouri State Poultry Experiment Station, Mountain Grove, Mo.

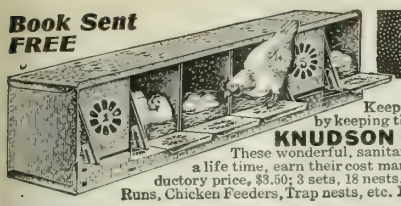
A Crow Elk-Hart Car for You

MR. POULTRYMAN!

If Not —— Why Not?

This is the HAPPIEST AND BUSIEST TIME OF THE YEAR FOR POULTRYMEN, who are doing big things. Proudly they look upon the vigorous young stock just blossoming into full plumage. They have visions of the ribbons the birds will take in the shows the coming winter, and also of the profits to be derived from broilers, friers, soft roasters and from other marketable products the flocks will place in their hands.

We are glad of your bright prospects, we are glad you are cheerful and thrifty, but don't find yourself **too busy to consider, carefully, the Crow Elk-Hart when you come to buy that motor car.** We are manufacturers, but we do not manufacture chickens, as you do at your plant, Mr. Poultryman. You have YOUR SPECIALTY, WE HAVE OURS. Ours is making one of the most efficient automobiles that travels the American roads today.



Crow Elk-Hart Cars have been subjected to the severest tests for the last seven years, and have demonstrated their true worth.

Buy a Crow Elk-Hart and you get a car that is beyond the experimental stage

and one that will give you service at all times. The manufacturers of the Crow Elk-Hart have placed the quality of their cars upon a basis that insures genuine satisfaction to the ultimate owner. The Crow Elk-Hart has many points of advantage over other cars. One of these is price. Let us tell you of the the other points. Your letter will have our prompt attention.

Crow Motor Car Company, Elkhart, Indiana, U. S. A.

If you are interested in fine Barred Plymouth Rocks, write us and we will send you one of the finest catalogues published of this breed. Write today for 40-page catalogue No. 3
POPE & POPE, Box A Louisville, Ky.

The Automatic
—Single and Double Decks—
The name "Automatic" is applied to the Newtown Giant Incubator because **it automatically performs every important hatching operation.**
A simple turn of a handle at its end turns 10,000 eggs in half a minute.
Pour a supply of coal into the magazine of its heater this morning and you need not do it again until tomorrow—the coal feeds automatically.
It has an automatic Regulator at its heater and an automatic temperature and moisture Regulator at each compartment. These compel a constant, even heat in each compartment of the
NEWTOWN Giant Incubator
If there should be an accident and your eggs endangered, a bell will ring in your bed-room, giving warning. This device will turn your wakeful nights into nights of restful slumber.
The Newtown Giant has five Automatic Safeguards against "off" temperature.
Absolute safety of your eggs—bigger and better hatches with the least labor and expense—that's what you want for your Incubator investment. You'll get all of this with a Newtown Giant.
And you can double your hatching capacity with the double deck Newtown, saving half on cellar construction.
Now is the time to plan for your large Incubator. We are here to help you—that's our business. You are entirely welcome to all the information and assistance we can give you and you are placed under no obligation by accepting it.
What size machine do you contemplate installing? What are the dimensions of your cellar? Or shall we send you blue print plans to help you build one?
Your copy of our catalog is waiting for you. Send for it now and put our Service Department to work helping you to solve your hatching problems.

ALDRICH WHITE ORPINGTONS

The Strain of Quality

If you wish to breed the MOST POPULAR and BEST PAYING VARIETY of chickens in America today, and WISH TO WIN AT YOUR SHOW, and start with the VERY BEST STOCK to be obtained, write and let us quote you prices.

Our young birds this year are much **superior to those of last season**, and we have out more **more early stock** that will be up to weight for the early fall shows, but on account of the **big demand** which we expect this season, we would advise you to book your order at the earliest possible moment to avoid disappointment and get the **best possible selection**, as we only sell to **one customer in each class** at a show. We condition all birds for the shows free of charge, and will send them to you in faultless form.

At the Great
Madison Square Garden Show

December, 1913, we entered 17 birds and won Best Display,

1st, 2d and 3d Cockerel
1st, 3d and 4th Cock
1st Pen
1st Hen
2d Pullet

At the Great
Chicago Coliseum Show

the week before we entered 19 birds, winning Special for Best Display, also Color and Shape Specials,

1st and 3d Cock
1st, 2d and 5th Cockerel
1st Old Pen
1st Young Pen
2d and 4th Hen
With no Pullets shown.

This winning at America's two greatest shows, together with our win at Allentown, 1913, and Atlanta, 1913, and our wonderful winnings for the past three years IN ALL OF AMERICA'S GREATEST SHOWS, easily proves that ALDRICH STRAIN WHITE ORPINGTONS cannot be excelled.

During the past season our customers have won at shows in all parts of America and Canada, including Boston, Atlanta, St. Louis, Detroit, Allentown, Cleveland, Cincinnati, Chicago, Richmond, Indianapolis, Jersey City, Grand Forks, Little Rock; Vancouver, Guelph, Winnipeg and Brandon, Canada.

We will RESERVE YOU A WINNER on recept of a small deposit at the present time. Send for our 60-page catalogue if you need further convincing. Mention American Poultry Journal when writing.

Poultryman's Practical Dispensatory

Chapter III.—How Soda and Magnesia Can Serve Us—The Different Kinds of Sodium and Magnesia and Their Uses Described

By J. H. Petherbridge

SODIUM, one of the alkali metals of universal distribution in nature, is always found in combination, as, for instance, the solid crusts found at the bottom of salt lakes in Armenia are 16 per cent carbonate and over 80 per cent sulphate of sodium; in Wyoming, California and Nevada are found enormous deposits of carbonates, mixed with the sulphate and chloride. All soils contain small proportions of sodium in soluble forms and sodium salts are essential ingredients in animal fluids.

In the form of the carbonate and bicarbonate, soda was formerly obtained mainly from the ashes of marine plants and our supply of same largely imported. As late as the '70s our annual importation from Great Britain alone ran over 20,000 pounds. Now we import practically none, for by Yankee research and experimentation we are able to produce by artificial processes and chemical reactions a better and purer product at less cost.

Carbonate of Soda, familiarly known as sal soda or washing soda, appeals only to the poultryman as a cleansing agent, its medicinal value being better exhibited in the bicarbonate.

Galvanized iron hoppers, troughs, brooders and drinking fountains are coming into more general use and are to be commended for cleanliness and durability, but they nevertheless demand occasional thorough cleansing. Make a strong solution of sal soda in a tub of hot water, immerse the utensils to be cleaned and allow to soak until the water is cool enough to handle; with a small mop (for sal soda is bad for the hands) wash thoroughly in the soda water, rinse in clean water, and set in the sun to dry and sweeten. You can clean a tin can that has held rancid castor oil by this method and I know no other cheap cleaner that will accomplish this.

Bicarbonate of Soda, better known as baking soda, being milder and more acceptable to the stomach than the carbonate, should always be selected for internal use or external application. It is preferable to the same salt of potash, as a simple alkaline remedy and antacid, because soda being the natural alkali of the blood and other liquids of the animal organism, has no general effect on the system.

If from overfeeding or through the consumption of fermenting grain or soured mash, any of your birds give indication of having a "sour crop" with resulting acidity of the stomach and intestinal contents, nothing will give them speedier relief than a teaspoonful of a solution of one dram of baking soda in an ounce of water. Two or three doses at intervals of three hours should relieve the condition.

Sodium Borate, or borax, too well known for its household utilities for a repetition in this place, but its value as a poultry remedy has not been so generally recognized and calls for brief mention:

The properties of borax that recommend it in poultry "practice" consist in it being poisonous to the lower forms of life, as exhibited in vegetable parasites, its antiseptic qualities and its soothing action on the mucous membrane, borax being nearly free from irritating properties. Borax being only slightly soluble in water, when so used as a wash, should be a saturated solution—that is, all that the water will dissolve.

In treating favus or any scaly diseases of the skin, the head, the neck and any other parts of the body showing the scale or effects of same, as the loss of plumage, should be thoroughly washed with borax water and dried before applying the healing ointment or oil with which you finish the treatment.

Borax water is further recommended for a wash for conjunctivitis, an inflammation of the membrane lining the inner surface of the eyelid, and to swab out the mouth and throat in ulcerated conditions. In the preceding suggestions, if you prefer, in place of the borax, you may substitute boric or boracic acid—five grains to the ounce of water. The therapeutic action of the acid is identical with refined borax, but the latter costs less and is usually on hand.

Sodium Silicate, the popular and trade name for same being water-glass. As an egg preservative, for the market poultryman of moderate production, the most convenient, economical and efficient cold-storage trust buster available. Eggs preserved in water glass for three months should in every respect compare favorably with strictly "fresh laid," provided they are fresh and clean when placed in the preservative solution. Preference should also be given to infertile eggs.

One gallon of water-glass, costing 50 cents, in 10 to 15 gallons of water, should be sufficient, in a suitable receptacle to cover 50 dozen eggs, hence it should not cost over 1c a dozen to hold a few hundred dozen over a falling market

The water used for mixing with the water-glass should always be boiled, allowed to settle until cool and then decanted (drawn off with a syphon). In insisting that only clean eggs be preserved, it was not intended that they be made clean by washing. This must never be resorted to in any method of egg preservation. The water-glass solution should overflow the top layer of eggs at least two inches.

Sodium Chloride (Common Salt), recognized from the earliest antiquity for its essential usefulness to man and beast; frequently referred to in the Bible, both literally and figuratively, called "divine" by Homer and referred to by Plato as a "substance dear to the Gods."

We all recognize the necessity of giving our domestic animals either ready access to salt or incorporating a small

portion in the food. Do we do it simply because we feel that they have an instinctive relish for salt, that it will increase their food consumption by rendering it more palatable, or do we understand that salt plays a most important part in assimilation and nutrition?

Salt is credited with materially increasing the number of red corpuscles in the blood and being instrumental in the upbuilding of the weight and strength of the body. If this be so, it tells us that though we may with no dire results occasionally omit the modicum of salt from the mash prepared for the adult birds, the omission as regards the growing pullets and cockerels may be more serious.

It is possible, however, to give salt in excess; if made a regular addition to the mash, one-fourth pound to a hundredweight of mash is ample for health and nutrition.

Salt assists digestion by furnishing chlorine for the hydrochloric acid necessary to the gastric juice.

Sodium Sulphate (''Glauber'' or ''horse salts''), although still employed by some veterinarians, has been largely superseded by Epsom salts, the latter being milder in action as an active cathartic and less disturbing to the general system. It is not recommended for poultry.

Salicylate of Soda—Its action and therapeutic value is identical with salicylic acid, and we will refer to it in some future article treating of acids. The bromide and the iodide of sodium are occasionally referred to by the medical advisors of the poultry press, but I consider these two salts better exhibited in potash and both of doubtful utility to poultry practice, when the cost of their administration is considered.

Magnesium.

Isolated, magnesium is a brilliant white metal, resembling silver, and burns with the greatest facility, yielding an intensely white light, and yet so wonderful are the metamorphosis wrought in nature's laboratory, in its union with silica, furnishing the arts and industries with the best known non-conductors of heat and fire resistants.

Magnesium is found in all parts of the world; the versatility of its physical appearance is represented by the soft, unctuous soapstone or talc through all gradations of texture to the hard serpentine rocks. To the silicate of magnesium we are indebted for our meerschaum pipe as well as the talcum of our toilet.

The modern wizards of commercial chemistry are giving us from magnesia and its salts, asbestos shingles for our roofs, firebrick for our furnaces, artificial stone and plaster for our walls, and tile for our hearths. From the hard serpentine rocks of Pennsylvania to the cryolite of Greenland and the magnesite of Europe and Asia, they are extracting practically all the salts of value of magnesia, soda and aluminum.

Carbonate of Magnesia—The oxide and carbonate, as far as utility and general characteristics, are interchangeable terms and familiarly known as ''light magnesia,'' ''calcined magnesia'' and ''lump magnesia.'' Both are excellent antacids and laxatives, but not well adapted for use with poultry, the bulk of an effective dose being too great for convenient administration and the further objection that they are without cathartic action in the absence of acid secretions in the stomach and intestines; this is why in human practice lemonade is recommended as a ''follow-up'' to a dose of magnesia.

There may, however, an emergency arise in your experience, when it will be well if you remember that magnesia is valuable as an antidote, as it forms insoluble compounds with oxalic acid and the salts of mercury, arsenic and copper.

Sulphate of Magnesia (Epsom Salts)—The one magnesia salt the container for which in the poultryman's medicine closet should never be permitted to remain empty. This well-known home remedy received its common name from Epsom, England, where it was first produced in 1675 by evaporating the saline spring waters that distinguished that locality.

Later it was discovered that the brine remaining after the crystallization of common salt from sea water furnished precisely the same product and being cheaper it soon superseded the ''Epsom'' source of supply, but the name has been retained.

Epsom salts are now, however, manufactured largely from the magnesium rocks. Aside from its medicinal use, it is used for weighting cotton fabrics, setting dyes, and whitening paper pulp. And in this connection, allow me to suggest that if you wish to secure brilliancy of finish and increased whiteness in your next application of whitewash, to every ten gallons of wash add two pounds of Epsom salts dissolved in hot water.

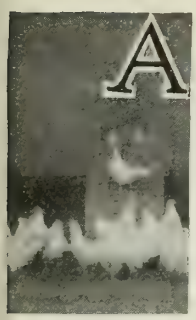
Epsom salts are well known as a safe, active cathartic, operating with little pain and nausea. They are more acceptable to the stomach than most saline cathartics and are retained when others are rejected. Particularly desirable as a laxative and cathartic in treating poultry, because it may be dissolved in hot water and the solution used to moisten the mash, thus ensuring a fairly even distribution among the flock and yet avoiding the labor and saving the time for individual dosing.

The dose should be from half to an eighth of a teaspoonful of the salt for each fowl, depending upon whether an active thorough purge is indicated or only a mild laxative action. And it is as the latter, administered periodically to all ''shut-in'' flocks, that I desire to urge the employment of Epsom salts. Where but one or two or a limited number of birds give indication of an acute disease of intestinal character, as diarrhoea, congestion or inflammation of liver, enteritis or limber neck, and an active, speedy cathartic is needed to thoroughly evacuate the bowels, in preference to salts I would recommend a teaspoonful of castor oil poured down the throat of the individual afflicted bird; however, as such an active purging is apt to be followed by constipation, it will be well for several days following to mix a small laxative dose of salts in the mash.

Birds on free range, during the green-growing months of the year, require no laxative drugs nor, for that matter, rarely any other dope. Animals in their natural habitat make no mistakes of diagnosis and in the open readily discover the medicine they require.

During the shut-in period, and under the artificial environment that many flocks must live in from incubator to oven, they are dependent upon us for the service they are barred from performing for themselves. As many and possibly more eggs can be produced from housed and penned poultry, but on the other hand you increase their susceptibility to many disorders to which they would be entirely immune on free range and enhance the practical value of suggestions here offered.

Within a month from the time of confining your birds to the laying house and scratching shed, I would recommend that for every six birds in your flock you dissolve a teaspoonful of Epsom salts in hot water and with the solution moisten the morning mash every fourteenth day during the entire shut-in period. Whether the droppings appear normal in color, consistency and quantity need not be considered for the gentle laxative dose advised can do no harm to apparently healthy birds. The fact of the case is, that whereas we at once recognize abnormal conditions of color and consistency in the droppings and from other indications are able to detect the individual responsible and isolate her for special treatment, a condition of constipation in the flock may often continue for some time without notice.



This condition is particularly menacing as spring approaches, not because of the coming of spring but because of the culminative effect of a winter of heavy feeding, limited exercise and possibly an insufficient supply of succulent greens. Spring calls loudly for bodily cleaning as well as housecleaning and the whole process of the former activity centers around elimination. The winter's accumulation must be cleaned out, the liver made active and the blood revivified, and no artificial remedial agents will do better work or give quicker results than laxative, alternating doses of Epsom salts and flowers of sulphur in the mash with due regard to a judicious, gradual change to a lighter ration.

If you deem the bi-monthly dose of salts during the winter months unnecessary, I urge strongly that in the early spring you resort to it bi-weekly for a month and the days that you do not use the salts incorporate a tablespoonful of flowers of sulphur in each quart of mash. It is not only safe, sane and timely treatment but largely preventive of many summer ills.

Maintaining the Vigor of Your Flocks

The Relation of Simple Biological Principles to Success in Raising Poultry—The Fundamental Factor of Vigor

By James B. Morman, Kensington, Md.

AS A SCIENCE biology lies at the basis of successful animal breeding, since it deals with the production and development of animals. Only to a minor extent, however, have the principles of biology been applied to poultry raising. This is hindering that development of the industry which its importance as a source of staple food supplies deserves. By the application of biological principles to poultry raising, the aim is to procure a larger supply of both poultry and eggs without any increase in cost or of labor. Therefore, when the extent and value of the poultry industry are taken into consideration, the aim sought to be accomplished has a national economic significance.

The Fundamental Factor of Vigor.

There can be no long-continued success in animal production without the maintenance of vigorous stock as progenitors. With poultry, the effects of vigor are shown in the fertility and hatchability of eggs and in the production of healthy offspring. Both have an important bearing on raising to maturity a larger number of fowls. This is the first step in increasing our supply of poultry without any material increase in cost and with little extra labor. If all the eggs that are naturally and artificially incubated were to produce strong, healthy chicks, and if all, or nearly all, these chicks were raised to maturity, our supply of poultry would in all probability be more than doubled every year. The losses from infertility and lack of vigor in the germ, causing the chick to die in the shell, are annually enormous. If to these losses be added those chicks which die after being hatched as a result of a lack of vitality, the drain upon the development of the poultry industry cannot be computed. In such cases the eggs, the feed and the labor become a total loss. If all could be saved, there would be a great increase in the supply of poultry with little practical increase in cost of production.

From the producer's point of view, the law of supply and demand is frequently invoked as an argument against increased production on the ground that it would lower prices and decrease profits. But where the producer of poultry and eggs can greatly increase his supply without much increase in cost for feed and labor, his profits would be increased even if the prices of products should fall slightly. Moreover, an increased supply produced under the conditions would have a national economic importance by giving the consumer cheaper and better poultry and eggs. The significance of the aims, therefore, where all are benefited and no one injured, can hardly be called into question.

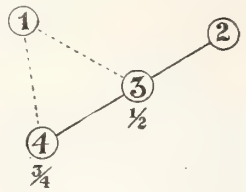
Biology applied to poultry raising seeks to accomplish these results. It is now quite generally recognized that health or vigor is the primary factor in the prevention of losses. A chick with an inherited weakness takes time and attention, and generally results in a loss. If such a chick survive, it is not likely to be profitable as an egg producer and it is practically unfit for breeding purposes because of the almost certainty of diminishing the vitality of the progeny through the principle of inheritance. For weakness as well as strength can be inherited. It is very important, therefore, that the poultry keeper select the most vigorous specimens of his flock of both genders for mating. In this way the vigor of the progeny is likely to be maintained by means of inheritance. It is the strongest chicks which survive under domesticated conditions which in no way differ from natural conditions where the strongest survive in the struggle for existence.

The Transmission of Vital Energy.

But the law of natural selection, which regulates the number and vigor of species in the organic world, has been augmented by conscious artificial selection in the breeding of domestic animals. At the same time, the natural law has not been and cannot be superseded by artificial selection without endangering the vitality of the offspring. In poultry breeding this danger is especially pronounced because to artificial selection of the breeding stock there have been added artificial incubation of the eggs and artificial brooding and feeding of the hatched chicks.

As an aid to natural means of production, poultry raising is the one industry where artificial methods are now extensively employed. To meet the growing demand for poultry and eggs, caused by the rapid growth of population, artificial incubation and brooding have been developed. But the increase in artificial supply is thus secured at the expense of vitality and physiological energy. Artificial incubation and natural incubation of eggs are not the same as regards the transmission of energy. Physical heat plus moisture in artificial incubation is not equivalent to the transmission of vital heat and energy in the natural process of incubation. The difference is great enough to account for the poorer results obtained under artificial incubation as to the hatchability of eggs and the vitality of the resulting chicks. The latter factor is also important in its bearing on later losses which may not only be discouraging, but even financially ruinous.

If no care is given to the selection of breeding stock, and if the eggs from such indifferent matings are artificially incubated, these two factors account for more loses in the poultry industry than all other sources of loss put together.



The successful poultryman recognizes the importance of natural incubation for the production of strong chicks and its bearing on the development of vigorous stock, though

First White Wyandotte cockerel, Chicago, 1914. Owned by Fred B. Keifer, Marshall, Ill.

he may not always understand the biology of the process. For the production of breeding stock natural incubation is preferred. Lack of knowledge of the biology of generation, however, frequently leads to erroneous conclusions regarding the effects of inbreeding or line breeding. Diagrams are presented to prove that by this system one may go on breeding indefinitely without injury to the vitality of the flock. This is exceedingly dangerous teaching. I note below the first two steps of a diagram and its explanation from a pamphlet issued by a poultry and pigeon association to

which the writer belongs, which advises the breeder to begin with birds that have not been too closely bred or inbred. The explanation is as follows:

Line Breeding.

"A good strain can best be perpetuated and improved by an intelligent system of line breeding. Study the chart. Be sure and begin with strong, vigorous birds—those that have not been too closely bred.

"Begin at the top. Note that the male is always represented by a solid line, the female by a dotted line. Each circle represents the progeny, namely:

"No. 1 mated to No. 2 produces group No. 3, which is one-half the blood of sire and dam.

"A male from group No. 3 mated back to his own dam (No. 1) produces group No. 4, which is three-fourths the blood of the dam (No. 1) and one-fourth the blood of the sire (No. 2).

"The fractions illustrate relationship between new groups and the original birds.

"Follow this plan on down and we have in No. 16 the new strain, and in No. 18 the strain of our original sire No. 2, thus giving us three distinct strains, and by this system we may go on breeding indefinitely."

All of which is mathematically and biologically impossible. The fallacy lies in the assumption that the first group of offspring contains "one-half of the blood of sire and dam;" that the second group contains "three-fourths the blood of the dam (No. 1) and one-fourth the blood of the sire (No. 2);" and so on through every step of the process until we reach the astounding statement that, after seventeen steps of degeneration, we reach in the eighteenth step the original strain of generation.

As a matter of fact, there is no transmission of blood in the mating of poultry. In the incubation of eggs, blood does not form for a long time after the process has been in active operation. But there is a transmission of vigor, which is due to the fact, as ascertained by Fol, Selenka and Balbiani, that the most agile and stoutest male germ performs the process of fertilization. This transmitted vigor is maintained throughout a normal and natural period of incubation by the transfer of vital energy from the hen to the egg. But the vital energy thus transmitted varies with the vitality of the hen, and this in a measure accounts for the variation in the incubation period, which may run from 19 to 22 or 23 days, and in the vitality of the resulting chicks. It is important, therefore, to have not only vigorous parent stock for egg production, but also to select hens with a strong constitution for hatching purposes.

Even under the most careful precautions with reference to the selection of breeding and hatching stock, some chicks will be hatched with a lack of vitality and these may die sooner or later. The same thing takes place among birds under natural selection. But losses from this cause are reduced to the minimum by care in selection, and the resulting losses must be accepted as the necessary incidents of poultry raising.

The Maintenance of Vigor.

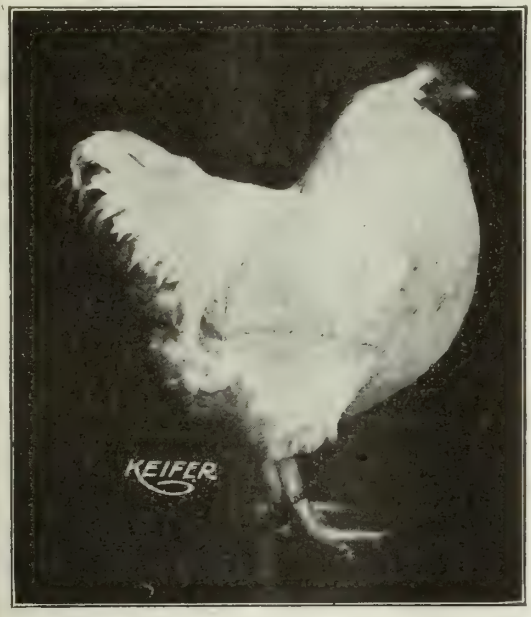
In scientific and successful poultry breeding, evidently the main problem is to maintain the vigor of the fowls. How can this best be done? The answer of biology is to introduce a new strain of the same breed at least once every two years. If this plan be carried out, results ought to be seen in the fertility and hatchability of the eggs produced by the breeding stock and in an increase in egg production up to the limits set by biology and physiology.

It has been my practice for many years to introduce a new strain as often as every two years and to use hens only for hatching. In proof of the importance of changing strain frequently by introducing new dams or new sires, I append the essential features of my hatchings to May 1, 1914. The record is as follows:

Date set 1914.	No. of Eggs.	Live Chicks.	Dead Chicks.	Infertile Eggs.
Feb. 7.....	13	13	0	0
Feb. 14.....	13	10	1	2
Feb. 28.....	12	8	4	0
Mar. 7.....	13	9	2	2
Mar. 17.....	11	10	1	0
Mar. 28.....	16	14	1	1
Apr. 1.....	15	15	0	0
Apr. 5.....	15	14	1	0
Apr. 5.....	13	10	3	0
Apr. 7.....	12	9	3	0
Apr. 10.....	14	14	0	0
Total	147	126	16	5

The number of eggs set varied with the time of the year, the size of the eggs, and the size and judged vitality of the hen—all these factors being taken into consideration for successful hatching.

Of the 147 eggs set only five were infertile and these were from among the earliest settings when the fowls were more or less inactive on account of cold weather. The eggs were all from pullets crossed with cockerels. The dead chicks, of which there were 16, include those in all stages of development and dead in the shell as well as those actually hatched and crushed under the hens. The 126 live chicks represent those actually given to the mothers 24 hours after being hatched.



First Prize Black Orpington Cock at Tampa, Fla., the past season. Owned by J. H. Wendler, Lakeland, Fla.

Of the eleven settings there were three perfect hatchings and four with only the loss of a single chick from the fertile eggs. It is impossible to tell whether the death of the chicks in the shell was due to lack of vitality in the germ, to exposure of the eggs by the hen remaining off the nest too long or not properly covering them, or to a lack of vital

nergy on the part of the setting hen. But when the time the year and other conditions are considered, the fertility nd hatchability of the eggs are high—results I attribute to ne maintenance of vigor by out-crossing.

With chicks hatched from eggs of vigorous stock by the atural method, the likelihood of losses thereafter is very ttle. Frequently in my case the losses from weakness or ckness are few, and I have gone through a season without ne loss of a chick. The best preventive against losses is

rst White Wyandotte cock, Chicago, Jan., 1914. Owned by Fred B. Keifer, Marshall, Ill.

us shown to be the inheritance of health by the mainnance of vigor along biological lines.

Effect on Egg Production.

In all probability, the most important economic result of aintaining the vitality of fowls is in egg production. If, better breeding methods alone, the egg production of cks can be increased without adding to the cost of the ed bill or to the amount of labor bestowed, the producer ll reap an increase in profits. To accomplish this by the plication of biological principles in breeding has been my m for many years.

The healthy active hen is the most promising egg proicer. The process of reproduction is a most delicate biogical function which is extremely sensitive to a decrease vigor in the fowl. A hen or pullet with a weak constituon may either not lay at all, may lay soft-shelled eggs, or ay lay eggs only occasionally. In either case she would t pay her board bill and would be more or less of a losing nture.

The work of the Maine Experiment Station for a period vering ten years sought to bring about an increase in ck production of eggs by following the inbreeding method. t, in reviewing the work in Bulletin 192, the statement is ade that "so far from there having been an increase, ere was actually a decline in mean egg production conrrent with the selection, taking the period as a whole." t with a flock whose vitality has been maintained by ientific breeding along biological lines, two tendencies be- me clearly manifest, namely, early laying and prolonged ying. The net result of both tendencies is to give an crease in egg production.

By experiments conducted in 1911, I ascertained that the rmal period before the average White Plymouth Rock llet begins to lay is seven and one-half months. But, by stematic out-crossing and selecting as breeders pullets hich laid in less time, I had before 1911 reduced the time beginning to lay to five months four days. Layers at out six months of age are of frequent occurrence. To ke a simple illustration.

I hatched a group of chickens on August 21, 1913. The pullets began laying from February 20 to 27, 1914, or in about six months. The eggs from these pullets were set March 28 and April 1 and 5, the pullets having been mated with a vigorous cockerel a little older of a different strain. Of 46 eggs set there were 43 live chickens hatched, one was killed in hatching, one was dead in the shell, and one egg was infertile. Thus, within eight months from the time these pullets were hatched, I had produced two broods from them. The statement shows that the hatchability of the eggs was high and the chicks were very vigorous. Among the popular theories about hatchings are two, namely, that a large percentage of pullets' eggs are infertile and that poor hatchings follow from mating pullets with cockerels. But both theories are shown to be erroneous, and the vigor of the breeding stock has much to do with both good and bad results.

While the direction of increased vitality is not within the control of the breeder, the general tendency, I believe, is for the increased vitality to follow the lines of least resistance, both biologically and physiologically, when fowls have been bred from early layers. As laying relates to the functional activities of the ovaries, an increase in vigor shows itself primarily in prolific laying. On this basis it is reasonable to expect and possible to secure an increase in flock production of eggs. If pullets have been bred from early layers but the sires of the new strain are not descendants from early layers, there is likely to be a loss in this characteristic; but, from the biological point of view, loss in early laying should at least be offset by gains from prolific laying as a result of introducing a new strain. So that, taking it from year to year, there ought to be no material decrease in egg yield as a result of changing strain, but in fact a slight gain in egg production might be expected.

The best proof of this contention as to the value of maintaining the vigor of laying hens on their egg production is shown by the following egg records for a number of years.

Since 1904 my flock of White Plymouth Rocks has been kept at about 50 fowls, of which nearly half were pullets and the balance hens. For the first three years no new strain was introduced, and the vitality of the flock was lowered, as shown by poor fertility and hatchability of the eggs and by a decrease in egg production.

In 1907 a new strain of males was introduced and a system of selection of the most vigorous and best-laying fowls was begun. The egg production in 1907 is taken as typical of the effects of inbreeding and as a means of comparison for succeeding years. The egg production each year was as follows:

1907—3,966 Eggs.

1908.....5,135	1911.....5,573
1909.....5,511	1912.....7,314
1910.....5,499	1913.....6,197

These figures furnish a conclusive argument as to the importance of biology in breeding for egg production. The very high egg record in 1912 is partly due to the fact that the flock contained 34 pullets and 20 hens, being practically a reversal of the numbers of preceding years. The record has a tendency to prove the advantage of pullets over hens for egg production. In 1913 the flock consisted of 26 hens and 27 pullets at the beginning of the year. The drop in egg production is attributed partly to the less number of pullets and partly to the fact that many of the fowls were sold before the end of the egg year to make room for 54 pullets with which a test on egg production is being made in 1914.

With the results of ten years of breeding work on flock production of eggs thus laid before the readers of American Poultry Journal, they seem to the writer to point to a definite bearing of biology on the future of the poultry industry. The difficulties of artificial selection, incubation and brooding are to be met by the maintenance of the highest vigor in the breeding stock. In addition to the ordinary precautions of good care and management as to the feeding and housing of flocks, the introduction of a new strain at least once every two years ought to go far toward solving some of the most important problems now confronting American poultrymen.

Would Officially Register Poultry

Missouri Station Pathologist Suggests Plan to Pedigree Standard Poultry That American Poultry Association May Find "Worthy of a Thought"

THE FOLLOWING LETTER and article on "Registering Poultry" from C. T. Patterson, pathologist of Missouri State Poultry Experiment Station, clearly present a matter that interests many poultrymen and one that the American Poultry Association may find "worthy of a thought." We will be glad to have comment from interested readers.

Mountain Grove, Mo., June 16, 1914.
Editor American Poultry Journal:

I am sending you herewith a copy of my plan of "Registering Poultry." It is not all theory, as I worked out the pedigree system a year ago for the Missouri State Poultry Experiment Station at Mountain Grove, Mo., and this season we have pedigreed about twelve thousand baby chicks and find it very satisfactory. The register part is theory.

My plan for bookkeeping is to make carbon copies of each certificate sent out, which serves as my record. The band numbers must correspond with the certificate.

By having charge of birds from all parts of the world wearing different makes of leg bands, and trying out sample bands and using thousands of bands in regular work I have perfected a band which I believe particularly suited to pedigree work. It is my plan to use this band for a register band and never use it for any other purpose.

I believe the American Poultry Association should take hold and endorse a proposition of this kind, as Poultry Registration should all be from one office, and, to get it fairly started, it should be worked on the per cent. basis, the Official Registrar receiving a certain percent. of the fees charged for registration.

I think a registration system with proper rules governing would be a great step in the right direction toward improving our poultry.

Very respectfully,
C. T. PATTERSON, Pathologist.

REGISTERING POULTRY.

By C. T. PATTERSON.

Just why poultry is not registered is a question yet unanswered. Many comments have been made on the subject, the conclusions usually being that it would be a good thing but there are two great drawbacks. One is not knowing the sire and dam, and the other the opportunity for faking or dishonesty.

Upon entering a discussion of this subject we should recognize a few fundamentals.

First, that all good moves have their knocks and kickers.

Second, that all businesses and professions have some fakers, crooks and swindlers.

Third, that dishonesty must be curbed by laws.

Fourth, that if a registration system is good for horses, cattle, sheep and hogs, that it would be good for poultry for the same reasons.

Fifth, that the success of any registration system will depend upon the pedigree system, which is its foundation.

Recognizing these as facts and that the registering of poultry is an honorable, legitimate business which has for its purposes the upbuilding of the poultry industry, the writer will present a pedigree and register system which articulate very nicely.

Ten hens should be penned with one male at least twenty days before the eggs are to be incubated. Each hen must be caught in a trap nest and upon being released her leg band number to be placed on the egg.

Each egg must be hatched in a cell by itself, and the number on egg placed on chick's leg band. If chick's leg band is lost its identity is lost.

In numbering the pens, cockerels and hens, the pen number and cockerel number should be the same, while the hen's numbers are the same with the individual hen's number to the right. For example, take pen number 28. The cockerel's number is 28, same as the pen. The hen's numbers are 280, 281, 282, 283, 284, etc., to 289. You see every bird has the pen number on it and every hen has the cockerel's number as well as her individual number, to the right. If more hens are used in pen, letters are to be used instead of figures for hens' numbers, as 28A, 28B, etc.

A chick with 287 on its leg band shows it to be a chicken hatched from pen 28, from hen No. 7, and sired by ockerel 28.

A period is used to the left of pen number, and to l t of period is placed the year and to left of the year n ber the number of the month, as 314.287. This shows it to e a chick hatched in March, '14, from cockerel 28, and l n 7. This is the pedigree number and should remain o the chicken throughout its life. The registration is all do by numbers instead of names.

The register number is read in same way as pe gree numbers, the figure to the left of period telling the rear and month the bird was registered, while to the rig of period tells its serial number in that month. In this way the numbers never become too great or cumbersome.

The method of registering is for the breeder to se l in application blank properly filled out, giving the pe gree number of the bird. This number is placed on a and together with the register number, and sent to the b eder with the certificate of registration. This band mu be placed on the bird instead of the pedigree band. This and tells the year and the month hatched, the sire, dam and pen, as well as the year and month registered, an the serial number in that month.

These bands are light and durable and never used fo any other work than registering. Duplicates are never ade, there being one band, one bird, and one owner elim ates much of the possibility of fraudulent work.

'Tis true that the government and banks have to ard against crooks who counterfeit or duplicate mon or checks; horses are sometimes stolen and houses broker nto, but with the proper rules governing the registratio and requiring the breeder to make oath as to the pedig e of each bird, the poultry registration will be as clean an ure as any business.

The highest distinction any bird can attain is to be gis- tered, showing an ancestral line of high-scoring, high- ring birds.

The certificates of registration show the bird's n ber and history of two generations of ancestors. The nu bers follow each other in such a way that any bird's anc tors may be traced back to the original registration. Ap lica- tion blanks are to be furnished by head office and fil l in by breeder, giving pedigree number of bird to be regis red, and sworn to before officer who has authority to admi ster oath.

Official Registra

Rules Placed on Back of Certificate.

1st—All scores must be eligible to first prize by An ican Standard of Perfection.

2nd—All egg records must be 80 or more for six n ths, or 120 for one year.

3rd—If sire or dam is not registered their record n t be sent and the register marked "Original Register."

4th—The bird must wear band furnished by Official Registrar containing both register and pedigree numbers.

5th—No bird can be claimed to be registered without such band.

6th—Any breeder transferring his own bands or removing bands belonging to another breeder is faking, and shall be barred from further registration.

7th—Records of sire and dam must be complete before further registration can be done.

8th—Young birds may be registered and scores and egg records sent later.

9th—No bird can be registered without breeder taking oath, sent with application, that the pedigree is correct.

10th—A fee of 25 cents is charged for each registration.

Key to Number System.

There is a register number and a pedigree number which belong on each bird registered. These numbers each contain a period. To the left of period shows year and month, while to the right is register number which shows serial number in that month. In the pedigree number the right-hand figure shows the hen number, while the figures between right-hand figure and period show the pen and cockerel number.

Example—Reg. 114.25 was register No. 25, in January, 1914. Ped. 313.875 was hatched in March, 1913, from hen 5, pen 87, and cockerel 87.

Some criticize the system, saying it is too much trouble. Others say it can't be done successfully, while the facts are their birds cannot reach their requirements. Others recognize the fact that a bird must meet the requirements in order to be a bird worth keeping. But all agree that the system will have a great influence toward better methods of breeding.

I have discussed this subject from the standpoint of the fowl, but the same system will apply to any poultry.

Photographs as an Aid to Advertising

It Pays to Advertise, But it Pays Better if You Spend a Little Time and Thought on the Character and Make-up of Your Ads. *By D. G. Beaty*

A GOOD PHOTOGRAPH of a bird is of great help to the advertiser. A first class drawing is believed by many to be more effective, but it depends upon whether the comparison is made with a good photograph or a poor one.

When we see a photograph we realize that it is apt to be a reproduction of the bird represented, but it is very easy to imagine that a drawing has been made especially for the occasion, and any defects in the birds have been carefully worked over until they are no longer noticeable.

Of course there are many points about fowls that cannot be told from a picture, but the style and general characteristics of the stock can be seen if the photograph is well made and reproduced large enough to bring out the detail. It is, of course, space wasted to attempt to use a photograph in an ad. occupying only an inch. An ad. two inches high, however, will usually permit of the successful use of a half tone. The picture, if an attractive one, usually calls the attention of the reader to what the advertiser has to say, and if it is a good picture it usually convinces the reader of the quality of the stock offered.

A great difficulty in the successful reproduction of photographs of poultry has been the cheap quality of stock upon which many poultry papers have been printed. Paper stock similar to that used by newspapers will not reproduce half tones, especially small ones, and do it well, but the better class poultry and farm papers are now using paper stock of a quality that will admit of successful reproduction of photographs.

The selection of suitably posed photographs for advertising purposes requires a keen knowledge of values of fowls and the ability to discriminate between good, bad and indifferent work. The idea is to get a good, taking, photograph of a good bird, and then use it in a space large enough to show to the best advantage. If the object is to emphasize some especial good point or quality, as clear, well defined barring in the Barred Rock, or unusual laying in a strain of fowls, these points can be well brought out by especially posed photographs and used to better advantage in advertising than a greater space devoted exclusively to telling the merits of what is offered for sale. Take, for instance, the ad. of Barred Rocks recently published by Bradley Bros., which contains a picture of a cock bird with one wing spread out to show the unusual barring. Such a picture is equally attractive and convincing. Likewise in a recent ad. of H. Cecil Sheppard in which he shows a picture of an Ancona hen on the nest with "$3" imprinted on the picture and beside it a basket of eggs, bearing the legend "$21.27," while above the illustration in large type appears the question, "Does this look good to you?"

Photographs of this type will attract the eye of the reader and interest him. By looking through the advertising pages of this paper many equally attractive photographs used in connection with advertisements will be found. And no breeder needs to copy the plan or ideas of another in his advertising campaign, for there are "just as many fish in the sea as have ever been caught," and a man who is clever enough to breed and rear good fowls, can, if he sets his mind on the task, work out an original idea in advertising that will equal if not eclipse those now in use by his competitors.

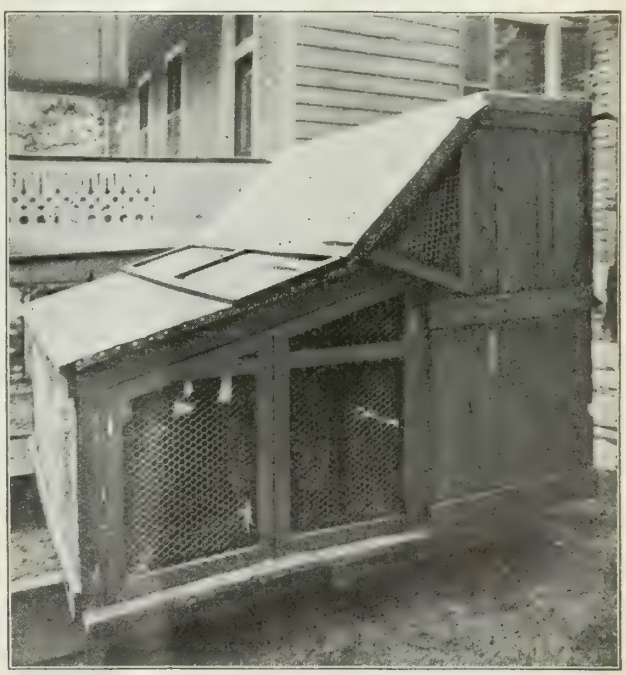

Fig. 1. Piano Box Open-Front Poultry House adapted from Dr. Woods' Open-Air House by Dr. C. L. Smith, Pensacola, Fla. View showing house closed for night in cold climate. Has not been so tightly closed in two and one-half years' use in Florida. See article "Low Cost Open-Air Poultry House."

In securing photographs, it is usually necessary to do the work yourself. There are, of course, some good photographers who can get the results you want, but they are few. The professionals in this line are naturally in great demand and not to be had at just the time you require their services. If a little judgment is exercised and a dependable kodak

used, one making a picture 4x5 or 5x7, even an amateur with a little practice ought to get good results. The important points to remember are, first, to have the bird posed naturally and in a position that makes it show to the best advantage; to place the bird where there will be nothing in the back ground or near it that will detract from the object of the photograph, and to realize the importance of the focusing of the camera so that the bird will be large in the picture; in other words, to remember that what you want to show is the bird itself posed as naturally and artistically as possible.

Place the bird in the sun, choosing a day that is bright—not partly cloudy. Then set the camera so that you have the bird in focus and make the picture at one-hundredth of a second. It is possible, of course, to take poultry pictures on darker days, giving a longer exposure, but the best results are from those taken under clear sunlight and made as a snap shot.

In using a photograph with an ad. be sure that the ad. is large enough to have the photograph at one side. If the picture must be placed either at the top or bottom you do not get the full results from it. A person's eye naturally travels in the direction the bird is looking and if the ad. is not in front of the bird, the next ad. is most likely to benefit. In other words, the photograph of your bird not properly placed in your ad. will help the other fellow more than you. It pays to advertise, and likewise it pays to spend some time and thought on the make-up and character of your advertisements.

Low Cost of Open-Air Poultry Houses

Piano Box Adapted to Dr. Woods' Open-Air Poultry House Plans and Successfully Used Over Two and a Half Years at Pensacola, Fla. *By Dr. C. L. Smith*

OR OVER TWO and a half years I have been a constant reader of Dr. Prince T. Woods' articles in American Poultry Journal and have not only been highly entertained but have also received much benefit from them. Most especially is this true in regard to the open-air plans for housing chickens. I have received many ideas for raising chickens that have proved to be most helpful and successful. That is, fine healthy chickens which have been free from diseases and insects so common in this community (Pensacola, Florida). I attribute my success to the open-air treatment and plans given from time to time in American Poultry Journal. Open-air housing and open-air methods are so inexpensive and so satisfactory that I am unable to understand how anyone should hesitate to use them.

I am sending with this letter three photographs of my

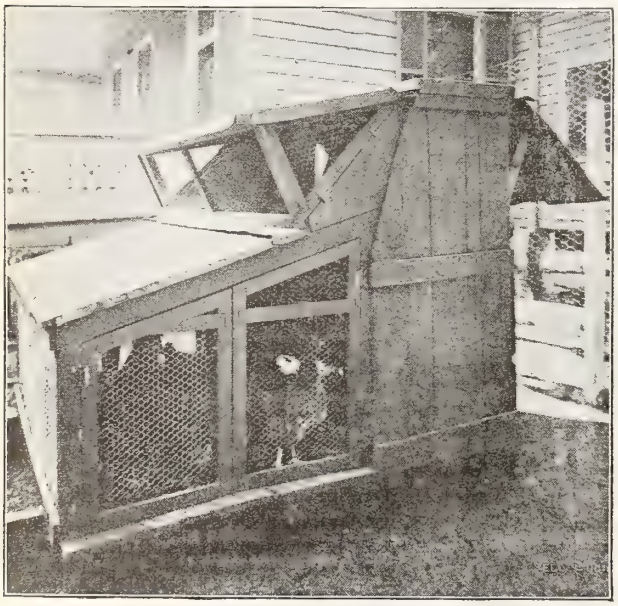

Fig. 3. Detail of Piano Box Poultry House adapted from Dr. Woods' Open-Air House by Dr. C. L. Smith, Pensacola, Fla. See article "Low Cost Open-Air Poultry House."

"Dr. Woods' Open-Air Poultry House," made from an ordinary piano box at a cost of less than $2. To be exact the cost was as follows: one dozen small butt hinges, 35 cents; wire netting, 75 cents; felt roofing, 60 cents; total $1.70. Some few small odds and ends of lumber about the place, a few nails and the piano box, which I had, complete the expense. The house has been in use over two and one half years. Anyone should be able to build one like it by referring to the illustrations.

This house will very comfortably take care of from 15 to 20 full-grown chickens. As will be seen in the illustrations the doors permit the whole interior of this house to be thrown wide open to the sunlight, which reaches every

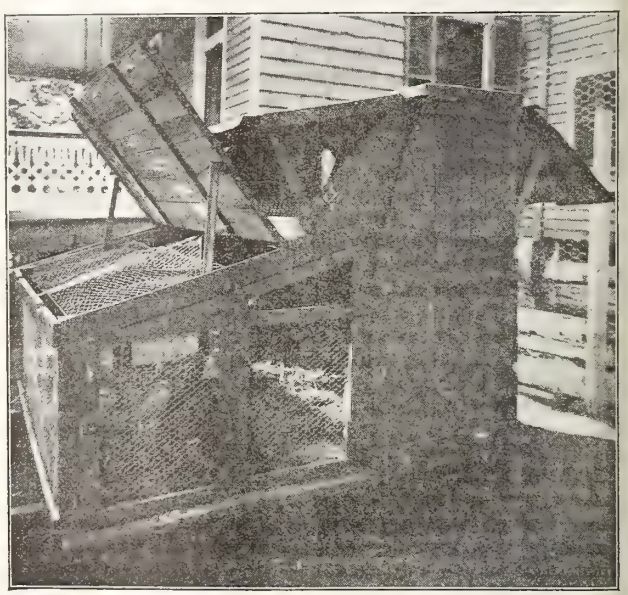

Fig. 2. Piano Box Open-Air Poultry House opened to sun and air. See article by Dr. C. L. Smith entitled "Low Cost Open-Air Poultry House."

corner, a great factor in prevention of diseases and vermin.

In Fig. 3 I have dotted in on the photograph the position of the perches, the droppings board and the nests, which are all portable and can be removed in two minutes. The nests are five in number. Eggs are removed through hinged door at rear, shown in illustration. This house is warm enough for the coldest climate when closed as in Fig. 1.

Fig. 2 shows the house as ordinarily opened to the sun and air. If the doubtful ones who fear fresh air and open-air houses would try this small cost piano box house, I am sure they would never return to the unhygienic closed poultry house. In writing this letter I am thinking more of the fowl than I am of the thoughtless owners. If many of the poultry raisers would cultivate and use their gray matter more and pay more heed to American Poultry Journal's well-written and learned articles they would find it easier to produce a good crop of chickens with better health and less expense.

The Best Way to Produce Fine Feathers

Feed and Care Required to Produce the Different Characters and Colors of Plumage—Show Birds Best for Utility Purposes.

By Chas. A. Simmonds

UPON the vitality of the bird the chemical quality and coloring matter of its food, exercise, sun, wind, moisture and temperature depend to a large extent the coloring, brilliancy, texture and length of its plumage.

The more popular breeds of poultry may be divided into three general classes —Asiatic, Mediterranean and Game. This classification is biological or racial, and not made with regard to the country where the breed originated, or its fancy points were perfected. Thus, the Asiatic class would include not only Brahmas, Cochins and Langshans, but Plymouth Rocks, Wyandottes, Reds and Orpingtons as well, and the Mediterranean race, Campines, Minorcas, Leghorns, Anconas, Hamburgs, etc. With the exception of the first three breeds named, all breeds belonging to the Asiatic class contain a slight admixture of either Game or Mediterranean blood but not enough to change their characteristics or bodily form to any extent; and thus all breeds belonging to either class may be said to be alike in bodily form, instincts and general characteristics.

The Asiatic and Game classes are the setting breeds and layers of brown eggs. The Mediterranean breeds are all non-setters, and lay white eggs. Anyone who compares two breeds in the Asiatic class, as Brahmas and Cochins, or Rhode Island Reds and Wyandottes, for instance, is apt to get the idea that their bodies differ greatly in shape, but the difference is mainly a difference in character of plumage and carriage of neck and tail. For instance, take a few Wyandottes and Reds of equal weight, age and sex, and as near Standard shape as possible. You will note that the Wyandottes have short, rather high tails, loose fluffy plumage, necks well arched and heads carried well back from the front of the breast, while the Reds' tails are much lower and a little longer than the Wyandottes', their plumage lays much closer to the body and their heads are carried quite forward as compared to those of the Wyandottes. The Wyandottes appear short and round, while the Reds are long and rectangular in shape. But if you will kill and pick the birds you can scarcely tell them apart by their shape, which shows that the difference in the shape of the live birds was caused by a difference in plumage and carriage. The Orpingtons are as loose and fluffy in plumage as Wyandottes, but appear much longer in body. This is due to the length and carriage of the Orpington's tail and head. If this does not sound reasonable, take a cockerel that is tame and easily handled, and notice the difference in his shape when you hold his tail at different angles. Of course, there is a difference in the body shape of even different birds of the same breed and strain, due to age, vitality and conditions.

By comparing the shape and disposition of the different breeds, you will note that the close feathered, long bodied hen is an active hen, the short, deep bodied hen is less active, less inclined to range or scratch, more inclined to broodiness, and the laying hens more inclined to become overfat. Inactivity is a principal cause of loose, fluffy plumage. Cochin breeders feed their growing chicks principally on mash, knowing that it promotes looseness and length of feather, while the breeders of exhibition Game feed nothing but hard grain, to secure "hardness of feather." This works in two ways: First, the hard grain must be ground in the gizzard, which exercise produces hard muscle, tight skin and thus feathers held close to the body, also the mashes are generally richer in feather-forming elements which tend to produce greater length of feathers.

The Cochin represents the extreme in abundant, loose, fluffy feathers, and to secure these qualities the bird should be fed but one feed a day, the evening feed being grain, and all other feeds mash. The young birds while growing need a good grass range, but should not be induced to exercise. Such a radical system of feeding and care is not used with other breeds. Some breeders of American varieties give their growing chicks two feeds of mash a day, but they also hopper feed or give several feeds of whole grain as well. During the first six weeks, chicks of all breeds are fed much alike, but the older they become, the more difference is made in their rations. All breeds of the Asiatic class have loose, fluffy plumage, as compared to that of the Mediterraneans, and so require feed that will tend to produce this character in the proper degree. With Mediterraneans, a light feed of mash in the morning will be found sufficient, if rich in protein and oils which impart brilliancy and luster to the plumage. A little oil meal added to the mash is quite beneficial; too much is worse than none. Buttermilk is the best feather food, and used to mix the mashes, imparts length and sheen to the plumage.

"Color Feeding" is a topic frequently discussed at the poultry shows. Some seem to think there are breeders who possess wonderful feeding "secrets," by which they are able to produce the desired shade of buff or red, or secure snow white plumage free from creaminess, on their birds. There are a few feeds, such as cotton seed meal, alfalfa, corn and clover, which have a tendency to impart a creamy tint to white plumage, as well as rich color to the plumage of colored varieties. White fowls may be reared without corn and with such green foods as contain no yellow oils (rape, cabbage and potatoes, for example) and will be found free from creaminess at all ages. The chick reared on free range will generally get all the iron, sulphur, coloring matter, etc., required to produce the proper color of plumage in the different weeds and grasses it eats.

Atmospheric conditions exert great influence upon all colors of plumage. There is almost no defect in shade of color that cannot be remedied by the proper balance of sun, wind, heat and moisture. In summer, the heat is so intense that birds of any color must be protected from sun, wind and moisture to retain the proper color. A good example of the influence of the elements on color is seen in black fowls; if you will examine the plumage of a black chick in hot weather you will notice the half grown feathers show considerable purple; as they grow the purple disappears, leaving the desired green sheen, which later disappears, leaving the feathers dead and dull in appearance.

Except in very hot weather there is no danger in white birds running in the sun, but if the weather is very hot the plumage will be sunburnt or brassy. But red and buff varieties require protection at all seasons, a few drops of rain followed by sunshine, on a buff bird, ruins its color. The prize winners in the colored varieties are generally those that come to maturity just in time for the show, and are placed on exhibition before their plumage has had time to fade or lose any of its brilliancy. If the yards contain plenty of good dense shade, and the roosting houses admit plenty of fresh air (they should be opened on all sides in warm weather) conditions will be right for birds that do not get their adult plumage before November.

Farm papers and even a few of the poultry journals have been trying to tell the public much that isn't so about how to secure an egg producing or utility strain of fowls. These writers leave the impression that stock bred to the Standard requirements are lacking in vitality and are poor egg producers. This false impression is encouraged by the practice of some unscrupulous fanciers in selling culls fit only for market as "utility stock." It may be true that fine feathers do not make fine birds, but it takes fine birds (birds with strong constitutional vigor) to grow fine feathers. The bird with a weak constitution fails to fill out in shape, being angular, knock-kneed and shallow breasted, its plumage lacks the brillancy and length of the vigorous birds, and last but not least, if placed on exhibition, it fails to "talk to the judge," and assume that pleasing symmetry or carriage every fancier recognizes as necessary to win in strong competition.

If you change your address give both your old and new address as well as your subscription number when notifying us of the change.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Chicago to Move a River.

CHICAGO, which conquers in the sign "We Will," now contemplates picking up a river which is in her way and carrying it out west where she wants it; not very far west—only a few city blocks; but the job will cost about $6,000,000, and that is only one item in the complicated and costly undertaking by which 1-764 of the city's area, where more than twenty railroads handle every day 112,000 tons of freight and 200,000 passengers, must be unmanacled from congestion. Drays clog the streets, commuters throng the ways, and the downtown region has still to build up from an average of eight-story structures to the present maximum of twenty stories with a daytime population and traffic corresponding. The present has beggared the dreams of past boosters. Engineers are now asked to provide for the future. Chicago's appetite for freight cannot be curbed by dieting. Her daily meal will keep on growing. She needs new digestive apparatus. Transference of the river and certain other capital operations will give it to her.

The foregoing was written for Leslie's Weekly by Mr. John Findley Wallace, who is famous as the first American chief engineer of the Panama Canal. The object in making this quotation here is to illustrate the typical progressiveness and determined "We Will" spirit of Chicago to overcome all obstacles in her wayward march to achievement and advancement.

The quotation also illustrates another thing that should be borne in mind, and that is, the enormous rapidity in which Chicago is growing in population and commercial activities. From 1833 a howling wilderness with the nearest railroad over 300 miles away—to 1914 the second largest city in America and the fourth largest city in the world—is certainly going some—and incidentally, a city worth seeing.

Chicago is all set to entertain the members of the American Poultry Association in annual convention assembled the second week in August and the same spirit of "We Will" make this the largest, greatest and most enthusiastic gathering of poultry breeders and allied industries ever held in the history of the world is right here on the job and working over time.

Theo. Hewes, in the July issue of Inland Poultry Journal, has made a prediction that will surely come true. He says:

"We venture the assertion that Chicago will make all other convention cities look like a dirty deuce in a new pack in its entertainment of the American Poultry Association the second week in August. We know the bunch that has charge of the program and we know that they are going to put one over on all the rest. We have been entertained East, West and South, and now the Mid-West will show us a few frills that the other fellows overlooked; and please understand that what they offer you free has no strings on it—no coupon with a rake-off. A coupon from this bunch means 'free doin's' and nothing else."

The pleasure program prepared by the Chicago Poultry Society for the visiting members of the American Poultry Association is a very elaborate one and will keep everybody busy day and night. Some of the interesting entertainments will include a trip to the great Union Stock Yards, one of the most interesting and instructive sights in the world; ball game by Brooklyn and Chicago Federal League clubs; reception for visiting ladies by ladies of the Chicago Poultry Society in ladies' parlor, Hotel Sherman; stag smoker for visiting men by men of Chicago Poultry Society in convention hall, Hotel Sherman; a noon luncheon for the ladies in Marshall Field's store, and inspection of the great store; auto ride to Jackson Park and Field Museum; a free boat ride on steamship Roosevelt to see panorama view of Chicago by night from the lake; organized trip to White City or Riverview parks with free admission tickets to their many attractions.

One of the most interesting features of the entertainment offered will be a picnic and luncheon at the great Peabody Farms, one of the largest and finest equipped live stock farms in the central west. This farm is noted for its expensive buildings and equipment, the poultry houses alone costing over $7.00 per bird. The farm is also the home of some of the finest livestock of all kinds and many of them are international prize winners. It is planned to make this a genuine old fashioned picnic, with all the games and trimmings where everybody may participate and have a general good time. This entertainment is offered through the courtesy of the Peabody Farms and everything is free, including transportation both ways.

In addition many other pleasure features will be offered to visiting guests; boat trips to Lincoln Park Zoo, free bathing at Lincoln Park and other beaches, and free admission tickets will be furnished to many other places of amusement.

Again Chicago extends a most cordial invitation to you to visit the largest poultry convention in the world, to be held in the great city of Chicago, second week in August.

Advance hotel reservation may be made by addressing E. J. W. Dietz, Secretary, 123 West Madison St., Chicago, Ill.

A. P. J. Chick-Growing Contest for 1914.

THERE have been many entries in the American Poultry Journal chick-growing contest for 1914. During July almost every mail brought a belated entry. All are welcome. If you fully comply with the rules as published on page 778 of May, 1914, A. P. J., your report will be welcome whether you notified us of your intention to enter the contest or not. Send in your report addressed to Managing Editor of American Poultry Journal, Lock Box 4, Silver Lake, Mass., to reach us not later than September 15.

The contest closes September 1, 1914, but reports will be accepted that bear

the official postoffice cancellation stamp dated not later than September 15. You should get your report in as early as possible and must have it in the mails by September 15, 1914. Be sure to carefully observe the rules.

Be sure to include the five photos of chicks at different ages as follows:

Pen. Eggs.

Photo No. 1. Day-old chicks.
Photo No. 2. Chicks two weeks old.
Photo No. 3. Chicks four weeks old.
Photo No. 4. Chicks eight weeks old.
Photo No. 5. Chicks three months old.

Remember to write your name and address in pencil on the back of each photo print, the name of the variety, the age of the chicks in photo and the average weight per chick. These rules must be carefully followed. Do not write on the face of photograph.

Be sure that your report is neatly and carefully written on one side of paper only. Take time to write your report and be sure that you have done your best. There are ten prizes. You want to do your best to win one of them. Even if you should not win you want your story to be worth while printing and to prove a help in boosting your favorite variety. It will soon be time to send in your report. Get busy.

Literary style will "cut no ice." The PRACTICAL VALUE of your story as an EXPERIENCE LESSON is what counts. Don't be afraid to write because you have never written an article for publication. Simply tell your experience just as you would write a letter about it to a friend whom you wanted to help to be successful with chickens. Tell your story plainly, forcefully, briefly and stop when you are done.

Drawn and Undrawn Market Poultry.

PERIODICALLY our law-making assemblies are asked to pass bills requiring all market poultry to be drawn. There is always much argument pro and con, although it should be apparent that where poultry is properly prepared for market it is more safe and sanitary to ship and store it undrawn.

The great trouble is that most of the poultry in most markets is *not* properly prepared. Much of it is killed and dressed with intestines full of food and waste matter and often with full crops. In such condition it spoils quickly and undesirable flavors are imparted to the meat, particularly of the "second-joint" and the breast meat about the "wish-bone." Small wonder that those who have to eat tainted poultry meat, or go without, ask that dressed poultry shall be drawn before marketing.

For many and obvious reasons drawn poultry as commonly prepared is unsanitary and undesirable. It seems hardly necessary to enter into details here as they should be familiar to all observing persons. Such objections as there are to drawn poultry would be removed if the carcasses were drawn in the same manner as other food animals; i. e., split open and all entrails removed in a cleanly manner without breaking and the finished dressed carcass held open with a clean wooden spreader. The chief objection would be that the carcass being thin would dry out very quickly and lose much weight.

Commonly the poultry dressers, because of greed and the fear of loss from shrinkage, feed poultry up to the time of killing. The result is that the intestines are crammed full of food and waste that is bound to taint the meaf if the carcass is kept even a comparatively short time. Even though the law usually requires that crops must be empty, a good deal of poultry is marketed with food in the crop which has been pushed back into the body out of sight where its contents ferment and spoil the meat. In other cases the skin and crop may be slit and the crop contents washed out, but this also is a bad and unsanitary procedure.

When the intestines are filled with food and waste matter, where fowls are not properly prepared for market, there is always more or less filtration of fluids and products of putrefaction into the lowermost tissues if the carcass remains long in one position, even when apparently frozen solid. This renders the fowl unwholesome as food and gives the unpleasant taste to the meat so common in the general run of "fresh-killed" and "storage" poultry ordinarily found in our markets. The only reason for marketing fowls with

full intestines is greed for gain and bigger profits. To properly prepare poultry for marketing and shipment entails more or less shrinkage in weight.

Where poultry is not split open and dressed as are the carcasses of other meat animals, the only sanitary way to market it is undrawn, but it should be properly prepared. Most of our American housewives prefer their poultry carcasses whole for convenience in roasting and would object to split carcasses. Though in foreign lands, and in our own settlements of immigrants from over seas, it is not uncommon to find split carcasses of poultry exposed for sale and to be able to buy whichever portion of the fowl appeals most to the buyer.

To properly prepare poultry for killing it should be kept entirely without food for at least 36, and better 48, hours before killing. The birds should not be penned but should be placed in a slat-bottomed coop where they cannot scratch over and eat their own droppings. They should have drinking water but absolutely no food. Prepared in this manner the crops will be entirely empty and the intestines will contain the minimum amount of food and waste; in fact, in most cases there will be little of anything except a little grit and fibre in the gizzard and a trifling amount of waste in the intestinal canal; nothing to do any harm and no danger of tainting the meat if the carcass is properly bled and chilled. The shrinkage is slight and the results obtained in a better and more wholesome foodstuff are well worth the trifling loss from less weight. Of course, it should be understood that the fowls must be properly bled, dry picked without tearing, thoroughly chilled before shipment, and under sanitary conditions. It is well worth while to prepare poultry properly for market.

Tons upon tons of poultry shipped to market annually prove a dead loss because not properly prepared for marketing. The loss usually falls on the dresser and shipper and not on the commission man or marketman. Last Thanksgiving many tons of spoiled turkeys in Boston market alone were condemned and sent to the fertilizer works, largely the result of their not being properly prepared for market. Those who prepare poultry for market should sit up and take notice.

We firmly believe that where poultry must be shipped long distances, or is intended for storage, it should be undrawn. But we do not believe in undrawn poultry unless it is properly prepared by complete fasting of the fowls for a sufficiently long period so that the crop and intestines are free from food and waste. Give us better market poultry, less tainted meat, no more full crops and stuffed intestines and there will be less frequent demand made upon our lawmakers for a law requiring that all market poultry be drawn.

An Open Letter to Mr. Patterson.

Albashire, Bartlett, Tenn.
June 24, 1914.

Mr. C. T. Patterson, Pathologist, Missouri State Poultry Experiment Station, Mountain Grove, Mo.

Dear Sir:

It has been my understanding that your station has been sending out material advocating a lighter weight type of chicken as the better laying bird. During the past two seasons and again last year, also in your letter, you specifically state that a good many of the Plymouth Rocks entered for competition in the contest were received in an immature condition, being immature at the beginning of the winter or at the beginning of the natural egg-laying season. A bird is thus forced into the reproductive period (whether by heavy feeding of nitrogeneous elements or the approach of the natural season) at a sacrifice to the size and weight, and which has perhaps led you to believe that the underweight bird is the egg-laying bird. This cannot be true as other experiment stations, and in my own experience, some extra large hens that are over Standard weight are splendid producers. In your observations have you found that the Plymouth Rocks that were received in a mature condition made good records?

A hen may be over standard weight, an exceptionally good layer, but she may not be of extra good market type. Occasionally she will be of splendid market type. She will probably be well meated, when fat, but she will carry too much meat on the thighs in proportion to the amount of meat she carries on her breast; in other words, the muscles of the legs will be developed out of proportion to the amount of muscle of the breast. This, perhaps, is due in part to the fact that she uses her legs in searching for feed, and isn't therefore a No. 1 market type, but she is a right good business hen for one to own. As a general rule our best layers are hens that exercise very freely. Occasionally an exceptionally good layer exercises very little, seems to live mostly from the dry feed hopper, and perhaps spends a good deal of time on the roost. I have no-

ticed this in three or four hens in the past year.

One individual behaves one way, and another absolutely opposite. One hen gains weight while laying heavily, another hen loses weight at the same time and in the same pen. We notice this especially in some of our feed lots. So much depends on the individual, and different individuals show so much variation I think one needs to be very careful about drawing general conclusions.

I believe as you do, that if the powers of reproduction are present in quantity, the average heavy layers will turn their surplus into eggs instead of fat, but I also believe that to obtain a goodly number of marketable eggs, it is absolutely necessary to see that the hen is fully matured and a little fat at the beginning of the test. The dairymen have conclusively proven this long ago and the many record breakers of the various breeds are cows that have been put into high condition before beginning the test.

I want to see the Plymouth Rocks kept up to good size, as we have already smaller breeds of chickens that are good layers, and if anyone wants to keep small chickens, let them keep some of the smaller breeds. The general tendency on most commercial farms is for stock to run undersize, is my observation, although it may not necessarily be true throughout the whole country. I have always looked to the specialty breeders to furnish foundation stock for the commercial breeders, and if they can breed their Plymouth Rocks a little over the present size, they will help undoubtedly to bring up the size on the commercial farms. Another thing, there is a very strong demand for Plymouth Rocks of a good size, good, strong, vigorous, breeding birds, and I think that a lessening of the weights would have a tendency to swing this demand to some of the other breeds, i. e., put them on a par. No matter how good a fancier may happen to be, he will always be dependent in the long run on the commercial growers. He may not sell directly to farmers, but his customers will sell direct to farmers, and unless his stock, second-hand as it were, pleases the general farmer and commercial growers, he will have to go out of business in time.

As I understand it, the Plymouth Rock is probably the leading meat breed in this country. I do not mean to say that we class the Plymouth Rocks as being of a meat type, but I do mean that if you will examine the carloads of fairly good marketable poultry that comes from the market poultry producing sections of the central west, you will find that Plymouth Rock blood is very likely to predominate every time. There are certain breeds called meat breeds, but so far as poultry meat production is concerned these breeds are only a drop in the bucket. I believe that one of the principal reasons for keeping Plymouth Rocks is so that we may raise a good marketable chicken that meets the demands of the market for good marketable chickens, the only exception being the very special trades where special breeds are raised, such as the Brahma, Cornish, etc. If we are going to keep the Plymouth Rocks popular with the general public we have got to keep up the size, so that they will remain, as now, good market poultry.

It has been observed that the Plymouth Rock, as a breed throughout the country, unless properly handled, declines in weight from those advocated by the Standard, and, from a market standpoint, we will hurt the breed to require other than the present weights.

Another thing should be borne in mind, that for a good many years the present weights have been in vogue, and if it is found that the Plymouth Rocks are not bred and fed to reach these weights, rather than to make a change at this time, it would be better to start a campaign, telling people how to properly feed and breed these fowls to attain the standard weights.

I shall be very pleased indeed for you to give me in full your observations on this subject, together with the weights at the four seasons of the year of all pens of Plymouth Rocks in preceding contests.

Assuring you of our hearty appreciation and thanks for the information you have given us, I am, very truly yours,

Martin F. Schultes,
Secretary W. P. R. Club.

Standard Weights of Plymouth Rocks.

ALTHOUGH the matter was pretty thoroughly threshed at the Atlantic City Convention and voted down, it is quite probable that the American Poultry Association at Chicago this month will again be asked to reduce the Standard weights of Plymouth Rocks.

Standard weights of Plymouth Rocks today stand practically where they have stood during the many years the Plymouth Rocks have been winning and holding popularity, with the exception of weight of pullet which formerly stood at 6½ pounds and was reduced in 1910 Standard to 6 pounds.

The present Standard weights of Plymouth Rocks are: Cock, 9½ pounds; cockerel, 8 pounds; hen, 7½ pounds; pullet, 6 pounds. If the breeding stock is sound, healthy and well bred there is no valid reason, where good management prevails, for failing to keep the majority of the birds up to weight and in good condition.

It has been argued that these weights handicap the breed as egg producers. This has not been proved

Buff Orpingtons **The Fashion Plates**

Eggs at half price. Stock quoted far below its real value. 40 cocks and 200 hens offered singly or in pairs, trios, pens or mated yards.

These are a part of **our 1914 breeders** and worth while for you to own.

Have you seen **The Orpington Fashion Plate Book?** It's crowded with **poultry talk**, beautifully illustrated, 56 pages. Free.

to date and it should be remembered that the Plymouth Rocks have won and held their present position as popular utility fowl under these same weights which a few breeders seem eager to reduce.

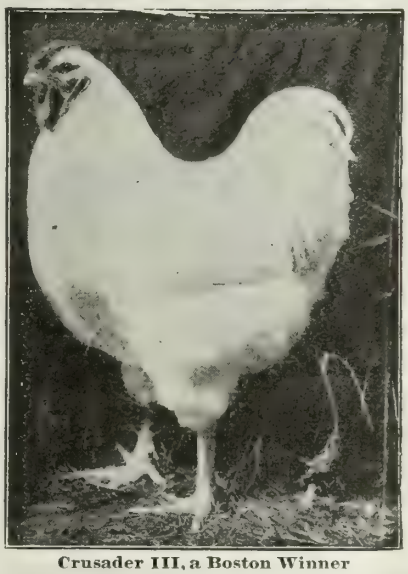
Size, of itself, has no direct bearing on ability to produce eggs. Weight. of itself, has no direct bearing on ability to produce eggs. We have had a good many big birds, above Standard weight, that have proved remarkably fine layers. In Plymouth Rocks we are inclined to favor the large-sized bird, with good big frame and ample body.

Heavy weight, when due to large size and not to excess of internal fat in a small-sized body, won't interfere with egg production. Fecundity is an individual characteristic and has nothing to do with size. Just because among winged things the ostrich lays few eggs and the gypsy moth produces thousands is no argument against big birds in American class varieties proving heavy layers. Size alone has nothing to do with the case. The heavy layer may be large or she may be small and the fact of her size has nothing to do with her ability to produce eggs.

Ask some poultrymen for a "heavy" bird and they will pick you out an overfat specimen with small frame and bagged down behind with internal fat. That is not our idea of a large, heavy bird. While a hen must possess some fat to lay well, we don't want an excess of fat that has been forced-fed into a normally small-sized carcass. We have seen some exhibition birds that had been fed into a state of fatness out of proportion to their frames in order to make Standard weights. If we were judging we wouldn't award a prize to specimens of that sort. We like a good large fowl in Plymouth Rocks, supplied with a comfortable allowance of well carried fat, neither too much nor too little. Such should make the present Standard weights very comfortable and the man who argues for less weight in Rocks is either permitting his stock to "run out" or is not managing his flocks for best results, and maybe has a personal preference for "small neat birds" that might be better satisfied with some naturally smaller variety.

Martin F. Schultes, secretary of the White Plymouth Rock Club, is very strongly opposed to any reduction of the present Standard weights of Plymouth Rocks. In a recent letter he advises us that he has secured a considerable amount of evidence opposed to any reduction of Plymouth Rock weights. Sixteen out of seventeen experiment stations, all doing extension work and carrying one or more varieties of Plymouth Rocks, in response to letters from Mr. Schultes, have reported as against any reduction in Plymouth Rock weights. He also reports that many breeders have written him at length vigorously opposing any reduction of weights in this valuable general purpose breed. In another column we print an open letter from Mr. Schultes addressed to C. T. Patterson, pathologist of Missouri State Poultry Experiment Station, which station has recently circulated articles that give the reader to understand that small hens have proved the best producers in the Missouri Laying Contests, though the data given in these articles appears incomplete and unconvincing.

More power to Secretary Schultes and all Plymouth Rock breeders who wish present Standard weights for all varieties of the breed to remain the same and unchanged. We hope that there will be no reduction of Plymouth Rock weights. There are plenty of smaller varieties for those who want a smaller fowl. The Plymouth Rocks, with present weights, are remarkably fine egg producers and hold a high place among the best market poultry produced in this country. In our opinion any reduction in Plymouth Rock weights would be a grave mistake and would work a great injury to this deservedly popular breed.



Selection for Constitutional Vigor.

SELECTION for constitutional vigor should be a process of continuous culling. It is particularly important at this season of the year when the chickens are beginning to mature.

Don't keep weaklings beyond the first marketable age. They don't and won't pay their way. Plan to keep only the best developed, strong, vigorous chickens. Lay the foundation for a sound, healthy flock by weeding out the inferior and weakly specimens as you go along through the season. At no time is such culling more important than now, before you begin the work of fall housing and yarding.

If no other reason appeals to you, make a practice of selecting stock birds for constitutional vigor, because it means bigger and better profits and fewer losses. The well selected, vigorous flock is the most productive flock and therefore the most profitable.

Cornell Experiment Station has recently published another interesting bulletin on the "Study of Constitutional Vigor in Poultry." They have been comparing the work of strong and weak flocks for several years. "In the comparison of all the strong flocks with all the weak flocks, the strong hens showed decidedly the more profitable returns.

Crusader III, a Boston Winner

3000 Regal Chicks

ALTHOUGH we had a cold backward spring up in Canada the supply of Regal Chicks is greater than ever. My first hatch came off January 15th and by March 10th I had over 1000 big, thrifty chicks with scarcely any losses. At the present time I have a flock of 3000 chicks that for quality cannot be surpassed. The early chicks are the most profitable. Why not breed a strain that will give you the early chicks? Regal White Wyandottes have such splendid vigor that I can get chicks whenever I want them. If you wish to make a winning at your State Fair let me quote you prices on matured cockerels and pullets or on exhibition cocks and hens.

Send for sale list giving description and price of 425 selected breeders also 20-page catalogue.

WEATHERPROOF — FIREPROOF — SANITARY

Peerless Poultry Promoter, Port Richmond, N.Y.

The actual difference in profit when all but fixed and equal charges are considered amounted to 40 cents a hen, or $400 for one thousand hens in favor of the strong fowls. Forty cents is more than many weak hens are worth. It is an unusually high return for so small an amount of work at the start in separating the stronger from the weaker fowls.

"If this is an illustration of what may be expected naturally from a rational separation of the strong and weak fowls—and it probably is, since no radical selection was practiced—then it would seem that the resulting increase in profit would make it well worth while to keep the strong hens and dispose of the weak ones. The more pronounced the difference between the strong and the weak hens, the better is the policy of disposing of the latter."

The bulletin prints the following conclusions:

"1. The continued study of this subject confirms the conclusions drawn in previous bulletins.

"2. The selection of fowls for strong vitality, even though such selection be slight and exercised but once, increases the productive power of a flock.

"3. One selection only is not sufficient to keep a flock consistently superior.

"4. The selection of mature pullets is of more value than that of partly grown chickens.

"5. Selection at the beginning of the second year is of equal importance with that of the first year.

"6. The results from flocks 76 and 77 indicate that the heavier-laying hen is not necessarily the stronger hen at all times of the year, and that in selecting for breeding stock to produce a large number of chickens and capable pullets, the first essential is to select according to strength, with the expectation that hens so selected will usually be the most productive."

We are glad to again call attention to the work Cornell is doing in comparing strong and weak flocks. The results of these experiments confirm and support the course we have preached and practiced for many years: that of breeding for health and the constant and consistent selection of strong birds possessing the maximum of constitutional vigor. If poultrymen will only form the habit of culling out and disposing of all weak specimens and make this a continuous process, if they will keep only the strong and vigorous and breed, feed and manage their flocks FOR HEALTH, we won't hear so much about diseases and campaigns for their eradication.

The only sane way to eradicate poultry diseases is to breed them out, with the aid of careful selection for constitutional vigor, good care and good management.

BEGIN NOW.

DR. WOODS' NOTES AND COMMENT.

Chicago welcomes the A. P. A.

* * *

The thirty-ninth annual convention should be a record breaker, plenty of work to be done, plenty of good times, and a good place for a big crowd to have a good time.

In an exchange we find reference to

E. B. Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Bargain Sale for 1914

Imperial "Ringlet" Exhibition Pen, winning First Prize and Sweepstakes Cup at Madison Square Garden, New York, 1913-1914, and Ckl. heading Second Prize Pen.

Type never told a story of greater values and more sweeping price reductions than in my Special Sale List which is now ready for mailing. This is an opportunity to buy the finest quality Barred Rocks ever offered in America at Special Bargain Prices.

This Is America's Leading Bargain Sale

It is unrivaled in high quality and low prices—This establishment is the largest devoted entirely to the breeding of High Quality Barred Rock in All America. There are more First Prize Madison Square Garden, New York, winners here than on all other farms combined. You can now secure Madison Square Garden winners and sons, brothers, sisters and daughters of New York winners, and birds of this richest New York first prize winning blood at the decided bargain prices. Birds bought now at the prices in my Special Sale List will pay you splendid dividends.

In This Special Sale List

Are listed the finest show birds, the finest breeders in single birds, pairs, trios, and pens that I have ever offered and at the rarest bargain prices. There are lots to meet the needs of all—the beginner who must begin right, the old breeder who will improve his stock, and the show man who wants to win in the strongest competition in the world.

See ad on back cover page for the wonderful record of my Imperial "Ringlets" at last winter's Madison Square Garden 1913-1914 show. This achievement takes rank in history as the most wonderful ever recorded since the New York show was founded.

It Will Be To Your Interest to have this Special Sale List and take advantage of this opportunity to secure "Ringlets" at the cut down bargain prices. Whatever may be your wants in Barred Plymouth Rocks you will find it in my Special Sale List at Bargain Figures: The List will be mailed promptly upon request.

Elegant 70-page catalogue upon application.

EGGS from the world's finest exhibition matings $10 per setting; four settings $35; 100 eggs $60—One-half these prices after June 10th.

E. B. Thompson

Lock Box 510, Amenia, N. Y.

the "June Quarterly Bulletin of the A. P. A." Was there a June issue? We did not receive any. Somehow we seem to have difficulty keeping on the association mailing list.

* * *

We note that a press dispatch states that eggs may now be bought by the pound, as well as by the dozen, in New York. "Coming, Father Abraham," but oh, so slowly! Judge Drevenstedt will please take notice.

* * *

The following law relating to the labeling of cold storage eggs went into effect in Massachusetts, June 20:

"Section 1. Whenever eggs that have been in cold storage are sold at wholesale or retail, or offered or exposed for sale, the basket, box or other container in which the eggs are placed shall be marked plainly and conspicuously with the words "cold storage eggs," or there shall be attached to such container a placard or sign having on it the said words. If eggs that have been in cold storage are sold at retail or offered or exposed for sale without a container, or placed upon a counter or elsewhere, a sign or placard, having the words "cold storage eggs" plainly and conspicuously upon it, shall be displayed in, upon, or immediately above the said eggs; the intent of this act being that cold storage eggs sold or offered or exposed for sale shall be disignated in such a manner that the purchaser will know that they are cold storage eggs. The display of the words 'cold storage eggs,' as required by this act, shall be in letters not less than one inch in height and shall be done in such a manner as is approved by the State Board of Health."

This is a step in the right direction. Eggs should be honestly labeled so that the purchaser may know what he is buying. Chinese and other foreign eggs should be labeled and such labeling is bound to come. The law quoted provides penalties and already a number of grocers offering storage eggs for sale as "fresh eggs" have been warned and some have been fined. There may be a howl and protest from trade sources against labeling eggs, but labeling is right and the purchaser should be protected. There is probably no other foodstuff that is so juggled in the placarding when offered for sale as eggs. The purchaser is confused with some sixteen or seventeen grades of so-called "fresh eggs" priced differently, yet mayhap from the same lot originally, and not a really new laid egg in the lot. Honest labeling of eggs would be a good thing for the poultryman.

* * *

A number of fanciers report excellent results in shipping hatching eggs by parcel post. One long distance shipment of a single sitting traveled over 2,000 miles and yielded eleven strong chicks. Can't find much fault with that. The eggs were packed in the common "split" market basket having two collapsible handles. The basket is first lined with newspaper and then with excelsior. Each egg is wrapped in paper and then given a good covering of excelsior. All are snugly packed and covered with more excelsior. A cotton cover is then put on the basket, the handles are raised and tied together and a tag attached. Address label is also pasted on the cotton top. There is almost no loss from breakage.

* * *

The June 17th New York Produce Review says:

"Judging from the appearance of the recent egg receipts from many sections of the West and the number of hatched eggs shown, a few more 'rooster days' are in order."

But why blame it all on the poor

rooster for doing his duty? It looks as if it would be better to have a "day" for careless, shiftless, poultry keepers, shippers and candlers. Eggs that are fertilized can be shipped long distances in warm weather and arrive in good condition. A neighbor received hatching eggs from England. A few of the eggs were cracked and proved to be of good quality and in good table condition. The other eggs hatched well and produced good strong chicks. If hatching eggs can safely cross the Atlantic in early June in good eatable and hatchable condition, surely we ought to be able to transport domestic eggs without so much rumpus about "rooster swatting."

There is a vast difference in brood hens. We raised quite a few hen hatched and incubator hatched chicks this season and as our help "flew the coop" early we had to give them our personal attention. One particularly fine mother was a yearling Rhode Island Red hen that our boy set on thirteen eggs in an outdoor nest. She was very tame and quiet and proved a close sitter and devoted mother. She hatched twelve chicks. The family was placed in a small box coop with wire enclosed run. The run had no top. Our close attention was first attracted to this brood by the mother hen jumping out of the run and foraging for insects, chiefly bugs and moths which she proved an expert at catching on the wing. We thought at first she was merely satisfying her own appetite, but found on watching her that she was foraging for her chicks and nearly every catch she carried back to the run and fed to the chicks. At feeding time she would always cluck and call the chicks and then stand back and let them feed, now and then picking out a choice tid bit for them or breaking up some bulky bit of food. She raised every chick. They were as alike as peas in a pod, all well developed, scarcely an ounce difference in weight and as neat and well feathered a bunch of chicks as we ever saw. Although this Red began laying when her chicks were two weeks old she stuck to her brood until they weighed over two pounds each and probably would have remained with them longer if we had not decided that the family was getting too big for the box coop.

Another brood hen was given ten incubator chicks in addition to the seven which she hatched, all the same age. The incubator chicks in two months weighed nearly half a pound more than the hen hatched chicks. One brood hen hatched one barred chick among a lot of White Rocks. She refused to own the dark colored sport and nearly killed it before we discovered how she felt about it. We had a two-year-old Buff Wyandotte mother that had been given thirty-four chicks half White Rocks and half Reds, hatched at the same time as the small dark sport, so we gave her the much abused little Barred chick. She took it into the family at once and is bringing it up into a promising member of the flock. We had some hens that kept their broods for ten weeks and others that insisted on weaning them when three weeks old. One Buff Wyandotte is still mothering a flock of thirty R. I. Red chicks that are almost fully feathered. She has the same number she started

with although she has been ranging with them all over the place and in the woods where foxes, skunks and hawks abound. While we can handle her or her chicks without more than a fussy protest on her part, it is really dangerous for a child to meddle with the brood, as the old Buff lady is quite a vicious fighter and quick to use beak and claw.

* * *

A number of hen hatched chicks placed with incubator chicks of the same age in a brooder have just about held their own with the artificially hatched chicks, but none of the lot are quite as well developed as a hen brooded flock of the same age.

* * *

Our trial of White Faverolles did not turn out very well this season. We started with a trio. They laid very few eggs which did not hatch very well and ran low in fertility. One of the hens died of acute indigestion after hatching a brood of chicks. All told we have not over a dozen Faverolle chicks. These have grown well and have just about held their own with White Rocks of the same age.

* * *

One of our friends bought 100 Rhode Island Red baby chicks from a poultry plant sixty miles away. He received 104 chicks and raised 102 good strong ones to good marketable size. That's going some for a beginneer.

* * *

We have received a letter from the pathologist of the Health of Animals Branch of the Canadian Department of Agriculture commending our July article on white diarrhoea and calling our attention to the fact that our conclusions are very much the same as his own. He says: "There is doubtless a big 'scare' on the whole subject and I am glad to see that you have started to prick the bubble."

* * *

It sure is a wicked waste of valuable time to fret and worry about diseases, to be always afraid of diseases, addicted to doping habits and to be continually looking for trouble. Those who always look for trouble usually find it. We hear mighty little about disease on the successful practical plants but quite a good deal from small producers and beginners. Why not put in the time to better purpose in seeking for health, breeding for health and constitutional vigor? What we seek we find.

* * *

In the human family will power, enthusiasm and wholesome surroundings do much to prolong the life and promote the health of the individual. We recall a hard-working enthusiastic old lady who died at a ripe old age after many years of hard work, having lived a useful and active life for more than forty years after famous physicians had given her up and said that she could live but a few days at most. A big, vigorous, active man of our acquaintance, now approaching 50, hale, hearty, and busy all the time doing a man's work and enjoying it, twenty-five years ago was told by eminent specialists that he had organic disease, must be careful not to overtax his endurance and that he had but ten years to live at best. Today he has more endurance than any man of his size and age of our acquaintance, is an enthusiastic and active worker, a hearty eater of whatever good food his appetite craves most; works early and late indoors and out and sleeps always in the open air. Enthusiasm, plenty of work and a will that holds tenaciously to the bright side of life will probably keep him with us for many years of active usefulness. There are plenty of such cases and the proportion is on the increase. Any lesson in this for you?

* * *

We had the coldest Fourth of July in Eastern Massachusetts that the "oldest inhabitant" has ever known. In fact, this summer has yielded but very few warm days in our home section of the country. Let 's hope that the weather man will be kind and give us a cool second week in August at Chicago, and that even the heat waves of the hot-air merchants at the convention will be more temperate than in the past. Of course, some of our great monologue artists will be with us and, even with censorship, "it pays to advertise"; but let us pray that the business of the meeting will be handled with neatness and dispatch and more time given to matters of helpfulness and wider interest. If any orator begins to get boresome and overproductive of hot air and redundant verbiage and egotism, let 's hope that the executive will call out the fire department and have a stream of cold lake water turned on him to shut him off and cool down his self-advertising propensities. Have printed in big letters a foot high and hung above the platform where all can see Burns' words:

"O wad some power the giftie gie us
To see oursels as others see us!"

And in quite as conspicuous a position use the old hotel sign:

"Don't blow out the gas!"

SUNLIGHT POULTRY FARM
E. N. Lemon, Owner Lynchburg, Ohio

Your Incubator Either Makes or Loses Money for You

A Candee incubator does more than simply hatch your eggs. It earns money for you hatching other people's eggs.

It earns money hatching chicks to sell to other people.

Today selling day-old chicks and doing custom hatching is the principal revenue of many specialty farms.

They find it the most profitable branch of the poultry business.

Even if you use the Candee only for your own work, you are money ahead.

Time is precious in the hatching season. If you spend it in the incubator cellar you are a loser and your other work is neglected.

Never in Cellar After Dark

Read what James R. Snyder, of Frazer, Mo., says under date of July 2, 1914:

> "I was never in my incubator cellar after dark this season to look at machine. Have never once in season gone to it to tend it but morning and night. Have had no trouble from any cause."

He has a 3,000-egg Candee and he says of the chicks produced by it:

> "I raise 90 per cent plus of chicks hatched in my Candee."

Every day it is becoming more generally known that with a Candee, one man can handle so many times greater incubator capacity with no more work.

For instance, Mr. Snyder reports that he averages only one hour daily handling his machine. His fire and heat regulation only take about five minutes of that time.

It increases a man's earning power. The rule seems to be that a poultryman gets a Candee from five to ten times the capacity that he had in oil machines.

Start With a Candee 1200

You can start with a 1200-egg Candee as illustrated above. This is the two-section size and it has four separate 300-egg compartments. Then whenever you like you add extra sections. The heater first furnished will handle 3600-egg capacity, after which heaters are exchanged free, f.o.b. Syracuse, N. Y., our shipping station.

You save money in fuel. It only costs a few cents a day for coal.

You save your time. Attention twice a day is sufficient.

You get the strongest chicks. Many Candees are purchased because the customer has previously had chicks that were Candee hatched.

Your chicks are better because the steady, even heat in the Candee gives more perfect incubation.

Shipped-All-Built

Getting a Candee installed is a simple matter. In a few hours it is set up and ready for the eggs.

Expert assistance is unnecessary. The heater connections arrive all in place on the heater. The sections are all finished. Simply stand up the legs, couple the two pipes together underneath and set the sections on the legs.

Extra sections are added at the rear in equally quick time.

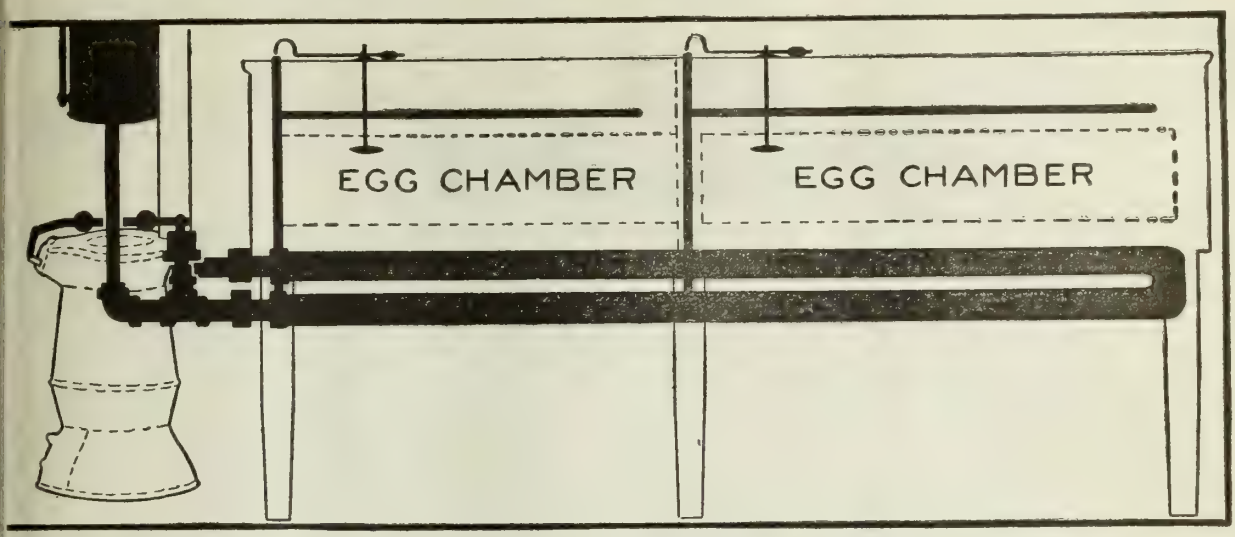
The Machine for Beginners

Purchasers of Candees include many beginners in poultry. They select the Candee because getting the right incubator is equally as important as getting good stock. Previous incubator experience is unnecessary.

The indications are that it will be especially profitable to start for this next season. A shortage of poultry is predicted and an unusual demand for chicks will likely follow.

With a Candee you will have hatching capacity to produce in large numbers and make greater profits.

You can also bring out your own chicks earlier and at one time.



Free 108-Page Catalogue

Investigate the Candee. Write for our free catalogue, showing hundreds of poultry plants. Ask present users and see their stock.

There are more Candees in use than all other mammoths combined. Doubtless there are one or more Candees in your locality.

The Candee record is an open book. Let us supply you with the facts.

Candee Incubator & Brooder Co., Dept. 2, Eastwood, N. Y.

THIS illustrates the Candee heating System of the 1200 egg size, shown on the opposite page. Note that the main heat supply is entirely outside the egg chambers and that the heat only enters the compartment radiators above the eggs as needed. The main heat supply, that is, the heater drafts, is regulated automatically. Each compartment radiator hot water supply is also regulated automatically. If the cellar warms up, less heat is admitted to the egg chambers, and if the cellar cools off, enough more heat flows in. Also each compartment is set separately and run at the exact degree of heat required for the length of time the eggs have been in. It is all done with regular thermostats and simple packless valves that do automatically the work that would otherwise have to be done by hand.

Uses Both Incubator and Brooding System

AN UNSOLICITED LETTER FROM A CANDEE CUSTOMER

GREENWICH VILLAGE, MASS., June 29, 1914.

Gentlemen:—

I have intended to write you my appreciation of your incubator and brooding system and their good work in my hands, but the rush of business caused my neglect.

My machine has done extraordinary good work this year—all poultrymen around here have been complaining of poor hatches, but with me things have been "pretty rosy." I am only regretting one thing, and that is, I should have got a machine twice as large. Between now and next February, however, I shall have two more sections.

My brooding system has proved to be wonderful. April 15th, with chicks hatched from my own eggs, and fourteen hundred in the house, the older being six weeks old, I had lost just twenty-seven. My first section hatch I raised to date, twelve weeks, and lost but one chick. I can raise every strong chick I put into my brooder until weaning time. Have done it right along to the astonishment of my friends. You will recollect that I constructed a combination house with colony pens. In these pens are roosts about a foot from floor, and it is not long before chicks are roosting.

I have certainly been satisfied thus far and feel that your system is THE system. Of course the cost of installation is considerable—not that individual brooders of similar capacity would not cost more—but because the outlay must be made at one time. But it pays. The comfort of working in the house and ease and economy of operating is a big item outside of the healthy and rugged chicks it turns out. I could never go back to lamp brooders or lamp incubators.

I take pleasure in recommending your systems and your goods to my friends. With best wishes for your continued success, I am,

LOUIS A. FAVERIO.

Brooder Heaters for All Kinds of Hovers

WE carry 12 sizes of heaters and are able to supply the exact size required — neither too large or too small. Each heater has an automatic water regulator. They can be used with the regular hovers, or with overhead systems. These heaters are noted for their reliable operation—coal them once or twice a day and they will furnish a steady supply of heat.

They save labor, are economical of fuel and the hot water heat can be delivered exactly where you want it.

What About the Chicks?

Success in brooding depends upon a steady heat for the chicks. The results are shown in the mortality and the kind of chicks.

The success of the Candee is based upon the astonishingly small mortality and the steady growth of the flocks.

"I never saw chicks do so well" is the common expression.

What Have You Now?

Our heaters can be easily and quickly installed. For small houses our No. 2 brooder heater will satisfy you perfectly. Hovers can be temporary or permanent. Write us the size of your present building and also how many chicks you want to brood at one time.

Complete Building Plans

We supply free plans for

Double Brooder House

Single Brooder House

Systems handle from 300 to 3000 chicks at one time.

Hovers are furnisned either as stationery or adjustable. The latter is most convenient and you can have any fractional degree of temperature.

Beyond question, our customers have established the fact that Candee systems brood most cheaply, with the least work, and that the chicks "do the best."

Their results year after year are a matter of record.

May we send you our catalogue? Write today.

Candee Incubator & Brooder Co., Dept. 2, Eastwood, N. Y.

Home and the Table
Good Things for Everybody

Helen J. Woods, Editor

I hear you, little bird,
Shouting a-swing, above the broken wall.
Shout louder yet, no tongue can tell it all.
Sing to my soul in the deep still wood;
'Tis wonderful beyond the wildest word;
I'd tell it, too, if I could.
Oft when the white, still dawn
Lifted the skies and pushed the hills apart,
I've felt it like a glory in my heart
(The world's mysterious stir),
But had no throat like yours, my bird,
Nor such a listener.

—Edwin Markham.

THE INDIVIDUAL who gazes casually, uninterestedly at the world about him, finds it, for the most part, but a paltry place. Other countries, other localities, with a lure of distance, lend a certain charm and desirability which the home place lacks. We have grown accustomed to the same trees, the same brooks, the same pictures on the wall, the same faces which greet us morning and evening, and we no longer appreciate their true worth. Not even do we fire our minds with the possibilities arising from their possession. Instead, we dream of the ocean views on the other side of the continent, of the grandeur of the Alps, whose peaks we have not been sufficiently favored to yet look upon, the marvelous canvases in old world galleries, or the men and women of renown in art, literature and statesmanship. We actually marvel that so little of value has been placed at our doors, and that we, who long for great things, should have been so disadvantageously disposed of.

It is a strang thing, but nevertheless a fact, that the gold mines under our feet have to be discovered and proved of worth by people from afar. We should continue to trample under foot the treasures of our particular locality from childhood to tottering age but for the stranger within our gates. These river views, or wooded lanes, or quaint old homesteads, are old stories to us who see them daily. We find little or no joy in their nearness.

One of the finest and most worth while things that the human mind has ever set to work upon is that of the possibilities of present possessions. We have all dreamed of what we could accomplish with great wealth, or infinite knowledge, or unparalleled ability in any line at our disposal, but the real question for each of us to solve is what we can, with the tools at hand, make of what we have. And no man to date has ever reached the limit of his possibilities. There are always greater things that he can do, deeper problems that he can solve, greater kindnesses that he can bestow, ever more worlds within himself that he can conquer. His mind is limitless, his powers are what he makes them. And the beauty of it is that there is ever so much of joy to be found in the doing.

One of the chief of our difficulties today in getting the best there is out of the stuff is that our human machinery has not been given much of an opportunity to develop its capacity. We bind children into drudgery before they have begun to appreciate the value of work. We stunt their natural play time, repress their eagerness in ferreting the why and wherefore of things. Very fine human machines have been relegated to the scrap heap by lack of care and consideration as regards their development and upkeep. On the other hand, no engineer, machinist or trained worker worthy the name would neglect to clean, oil and otherwise keep in the best workable condition the machinery by which he accomplishes his work. Yet only by the workings of the human machine have these marvelous mechanical devices been made possible.

No individual ever really hated his work who had been fitted and trained to do it. No one really dislikes his surroundings whose eyes are trained to see the beauty and possibility of greater beauty in them. It is the lack of anything worth while in sight that makes work, or even life itself, distasteful and uninteresting. The child who is driven from one disagreeable task to another, without so much as an appreciative smile or an "I thank you," from his task master, learns to know work only as the veriest drudgery, it becoming meanwhile more and more distasteful to him. But the possibilities resulting from work are to any child a delightful problem. Indeed, we need a vista of something worth while to work for in anything we may undertake. The mere work itself would not interest us were it not for what work brings about.

There is not a town, a community, a home in the land but that has possibilities undreamed of by the occupants. All they need is a little freer use of the imagination, a little more enthusiasm and courage, a greater amount of team work, and the apparently impossible is brought about. The town, the community, the home, all need to be made more beautiful. The schoolhouses and their surroundings the country over are a disgrace to the nation. It will take enthusiasm, courage and team work to make them anything approaching beau-

BOURNE MANUFACTURING CO.

231 Howard St. Melrose, Mass.

tiful, but it can be done. The natural landscape in practically any vicinity possesses some beauty. It may be trees, shrubbery, or brooks, hillsides or valleys, fields of grain or pasture lands. Only by the hand of man has the beauty of a community been blighted, and it is the duty of the inhabitants of such communities to restore the beauty of these waste places, and make them blossom as the rose.

The progress of the world is that of making things better than they have been made before. We hear a great deal about the good old days, but none of us would be willing to revert to them. The training that we received will not suffice for our children. There are more things in heaven and earth than are dreamt of in our philosophy. We can only begin to help the children to an appreciation of their own possibilities, to enthuse them with a desire for the betterment of present day conditions, to train them to value work for the result which it brings about. And this does not mean our children alone but our children's children, our neighbor's children, — every child, everywhere, trained to earn his or her living, to be regarded as someone in particular, convincing him that he is, and giving him the opportunity to prove it. Every man, woman and child, every town and community has something worth while if we will but bring it to the foreground. Get acquainted with your town, with your community, your family and make it a point to appreciate the beauty and worth while things to be thankful for. The unsightly things, the jarring element, the disturbing factors can be done away with in time, but for the present let us keep them in the background of the things beautiful we have all about us. If such things seem to you to be few and far between, take up at odd moments a study of the birds which favor your community; and the days and weeks to come will take on a new interest for you, from the time of the first returning robin in the early spring, through all the delightful acquaintance with bluebirds and orioles, goldfinches, phœbes and vireos, with an occasional cedar waxwing and gorgeous woodpecker to stimulate the admiration for these wonderful inhabitants of the great out-of-doors. A study of the birds will prevent a lagging interest in your surroundings, and open up a world of delight to you. Equip your mind with interests which no calamity can crush. Make of it a veritable storehouse of ideas and possibilities, where, no matter what disaster may face you, there remains a refuge of delight within yourself. Most of us need either more play with our work or more work with our play. To get the best out of life, we must give our best. Adulthood should be but a continuation of a happy childhood in which a mixture of work and play combined, with a keen and unspoiled appreciation of the little things, make up a happy, well-filled life.

Delicious Salad.

Select firm ripe tomatoes and place in the ice chest until thoroughly chilled. Then scoop out the pulp, salt and pepper the inside to taste. allow to chill and garnish with sliced cucumbers.

Blueberry Cake.

Cream half cup butter with one cup sugar and add well-beaten egg. Sift together two cups flour and two level teaspoons baking powder and add alternately with one cup milk. Fold in one cup floured blueberries and sprinkle sugar over top. Bake in medium hot oven. Serve immediately.

Mahogany Cake.

By L. S.

Cream one-half cup butter with one and one-half cups sugar; add two beaten eggs and one-half cup sour milk in which one level teaspoon soda has been dissolved. Sift two cups flour with one-half teaspoon salt and add to the former mixture together with two tablespoons best cocoa or one and one-half squares melted chocolate dissolved in one-half cup boiling water. Flavor with one teaspoon ground cloves and cinnamon mixed, and one teaspoon vanilla. Bake in medium hot oven.

Chocolate Frosting With Nut Meats.

Mix one and one-half cups sugar with two tablespoons cocoa, add a sprinkle of cloves, cinnamon and salt, a small lump of butter and sufficient cream so that the mixture will pour from a spoon. Allow to boil until it drops in bubbled masses from a spoon. Remove from stove, add chopped nut meats, flavor with vanilla, and beat until proper consistency to spread over cake.

Baked Tomatoes.

By L. S.

Cut a slice from the top of round, ripe tomatoes and remove the pulp. In a frying pan melt a lump of butter, add a tablespoon of chopped onion and half a tablespoon chopped green pepper, and allow to sizzle on back of range for ten or more minutes. Add a half cup bread crumbs and one half cup chopped ham and season with pepper and salt if necessary. Fill the tomatoes with this mixture and bake in a moderately hot oven, basting with butter frequently.

Nut Bread.

By L. S.

Sift two cups each of white and graham flour with a heaping teaspoon salt. Add one and one-half cups sweet milk with one beaten egg and one cup of molasses. When thoroughly mixed sift in four teaspoons baking powder and one cupful of floured and chopped English walnut meats. Place in buttered tins and allow to rise twenty minutes. Rub melted butter over the top of loaves and bake slowly for one hour.

Poultry Diseases and Their Treatment

By F. A. Kaupp, M. D.

A book containing 185 pages, 5x8 inches in size and is profusely illustrated with original half-tone and pen and ink engravings. It shows the many parasites, germs, and bacteria that attack our poultry, as well as tells the names of the diseases, the cause or causes, the symptom and lastly the *treatment for each disease.* The book is printed on a high grade super calendared book paper, substantially bound in cloth, linen sewed to make it flat opening and the title is stamped in gold. Every poultryman should add this very useful book to his library. Remember that we prepay all charges on the book to your town.

CAPON DAY.

By George Beuoy, Cedar Vale, Kans.

"CAPON DAY" is becoming a common occurrence once each season in many poultry sections. Hundreds of letters are reaching me asking for information on arranging a program for "Capon Day." As the object of the meeting is to find a profitable way to "Swat the Rooster," it is best to arrange with someone that is familiar with caponizing to give a short talk and demonstration on live birds. Caponizing has become so profitable and popular in the last few years that in almost every community there is someone that can be had for this purpose. It is always best to get a local party to do this, if possible. In the last few months I have lectured and given demonstrations at more than a hundred towns in Kansas, Missouri,

A 12-LB. WHITE ROCK CAPON.

Oklahoma, Arkansas, Texas and Louisiana. These "Capon Day Meetings" were all well attended; in fact, at many of them there were several thousand people in attendance. All together I am sure that I have explained and demonstrated exactly how to make a capon to more than one hundred thousand people, in the year just passed. Many of these "Capon Day Meetings" were gotten up and the expenses paid by the farmers' institutes. I had more calls from this source than I could fill. Over in Missouri, in connection with their series of field meetings, the capon lectures and demonstrations were featured and the necessary expenses paid by the Missouri State Poultry Board. That prince of poultrymen, "T. E. Quisenberry," arranged and planned the series of nine meetings in his principal poultry sections. The result was a big crowd in attendance at every meeting. I am certain that there was over two thousand people at every meeting and as many as five thousand at several. At Mountain Grove, where the Missouri State Experiment Farm is located, the public schools were closed so that the pupils could attend the meeting. At that place I had several hundred children to show and instruct about making capons. Down in Wayne County, in southeast Missouri, the county superintendent ordered every school in the county closed so that the teachers and pupils could attend the poultry meeting. The superintendent was on hand himself to see that they were all there and properly instructed. So much interest was stirred up at this meeting that a rep-

resentative of the K. C. S. railway, who was at many of the meetings, arranged for a special demonstration train over his lines, and one car was fitted up for the poultry exhibit, and a large display of capons was featured. I was placed in charge of that car and gave the lectures and demonstrations at twenty-six towns on that system between Kansas City and the Gulf. At every place I met several men and ladies that were just as expert at making capons as I or anyone else, and could have given the talk and demonstrated on the subject equally as well. So I am convinced that a "Capon Day Meeting" can be and should be arranged in every poultry growing section this fall. Modern conditions demand modern methods and caponizing is the only modern profitable way to "Swat the Rooster." Get busy and arrange for a capon day. Have a bunch of birds; have them in condition and

Capon and chicks—one way to raise prize winners.

of the proper size and condition to work. Select little roosters that are about like a quail in size and appearance. Get them before the comb and wattles begin to redden or develop. Have them off feed for at least thirty-six hours; during that time be doubly sure they do not have anything to eat or drink. These two things are very important in making capons. If they get anything to drink they will be sure to bleed. If they do not drink they will not bleed. If they eat you will not have room to do the work. So be sure to keep food and drink from them for thirty-six hours. This will be no hardship to a chicken as nature has provided him with a crop for carrying a supply of food and water that it takes nature thirty-six hours to exhaust. Good results cannot be expected if the operation is performed while food or water is in his system. It is not necessary to have anyone to show you how to caponize. I believe the average person will learn it quicker and better to get out by themselves and commence on a dead bird. One that has just been killed to eat, and practice up in that way. Follow the instructions that come with the tools that you must have to do the work with and anyone can do it. Many people are slow to take up anything of this kind and until they have seen someone do the work and realize how simple and easy it is, they will not get started. Hence the value to the community of a "Capon Day." I am getting a lot of letters from people that started last year after attending a "Capon Day Meeting." I have a letter before me from J. J. Slattery, of

FRED W. MORSE CO., Mfrs., Providence, R. I.

Wichita, Kans., where I gave a lecture and demonstration in connection with a Kansas State Poultry Show. Mr. Slattery says 1913 was a very good year for capons, considering the fact that this was the first year that caponizing was done to any great extent. Personally I caponized 927 birds, and of that number I only lost 16 and two of them from not getting the proper care after the operation. They were let run with old hens and, to make it worse, there were two old roosters in the pen. It was lucky that they were not all killed. As you know, they should have been kept in a pen to themselves for a few days, right after the operation. Out of the 912 I only had two "slips" develop. Can you beat it? I feel proud of that record and I think the instruments you recommend are the principal, if not the main, reason for that good record. Now about the profit made on capons. They were a new thing here and the local buyers did not know what they were worth; the best they would offer was 14 cents per pound, live weight. But I found a market for all the capons I had made. I just called up the wealthy people on the phone and explained to them what a capon was and that they should just try one. In that way the first day I got 14 orders for capons. The people that bought them liked capons so well that they came back for more and told their friends, and in that way I was able to sell all the capons that were for sale. I charged the people that raised the capons 25 cents for my trouble and everyone was satisfied. I sold the capons for 25 cents per pound, live weight, which we considered a very good price, as they averaged around ten pounds each. I saw a little farther ahead, however, and did not sell my own capons until the month of March and then sold them for $3.00 each, to be used as brooders, and was not able to furnish half enough at that price. I know that my capons made me a net profit of more than a dollar and a half each. Anyone can do just as well as I did. It is "pie" to sell capons as foster mothers. People surely want them. From present indications 1914 promises to be a better year for capons than 1913, as everyone here that is raising chickens is planning for a few capons this season. Mr. Slattery's plan for building up a local demand for capons is a good one. Emory McClung, Bridgeport, W. Va., writes that capons are bringing 35 cents per pound at his town. He states that they commenced making capons there some three years ago, and the demand has become so good that the price has gone up accordingly. Richard Butler Produce Co., Kansas City, Mo., have just written me that they wish to contract for five hundred young capons alive, to be delivered in October this year, and that they will agree to pay 18 cents per pound for them in five hundred lots or less. They wish young capons so that they can feed them out themselves. Three years ago most of the capons produced were made and grown in the eastern states. Now the conditions are changed and Missouri, Kansas and Oklahoma will this season produce more capons than all the eastern states combined. I have the proof to convince anyone that will take the trouble to investigate the truth of that statement. Capons are the most profiable part of the poultry business, and they have come to stay. Arrange a "Capon Day Meeting" and help to get your share of this good business.

WHO IS RIGHT?

EARLY in June I wrote two prominent breeders of Single Comb White Leghorns, asking them whether or not they hatched during June, and, if so, to quote me prices of day-old chicks. I explained to them that I was anxious to make an experiment with chickens hatched during this month, but on account of extremely warm weather did not care to do the hatching in this locality. In other words, I wanted to experiment with chicks hatched in a milder climate but reared in the South. One of these breeders is located in New Jersey and the other in Pennsylvania—not very many miles apart—and their replies are really interesting, in that each claims to speak from experience; still, each contradicts the other. I do not think I am violating the confidence of either gentleman by quoting the replies I received. The New Jersey breeder wrote me as follows:

"Replying to your favor of the 15th, I beg to say that our last hatch will come off about the 28th of June and I will be glad to fill your order for the chicks at the special price we have advertised this season—15 cents apiece in lots of less than 100. If you can take 100 we can quote you $12.50 per hundred. . . . I think that your idea to experiment with June hatched chicks is a very wise move. Of course, another season, if you will give me a good-sized order for July 1st hatched chicks, I can make you quite a special price on them, as up North people do not want them. For myself I will say that a hatch of four years ago on June 24th produced a larger percentage of record layers than any other hatch I ever have had. There is more buncombe going around from mouth to mouth in the chicken business than sound sense, and this idea that a June hatched chick is no good is one of them. The fact remains that Nature selects June to hatch the vast majority of chicks, of which the hens, if left to themselves, will bring out more chicks than any month of the year, and in the hatching business you cannot beat Nature. Awaiting the pleasure of your further advices, I am."

The Pennsylvania breeder wrote me as follows:

"Replying to your favor of recent date, beg to advise that we do not hatch chicks after June 1st. We note your remarks in reference to June hatched chicks. It has been our experience, even here in the North, that these cannot be handled profitably for hatches after the early part of June, and your idea that these chicks will come into laying by the middle of November is, in our opinion, a mistake. They may lay an egg for each fifty chickens, but as to produce to profit, they will not do it."

These gentlemen are both progressive, twentieth century poultrymen, successful both of them, and both operate large egg farms. Their farms are located in the same section of country—not more than two hundred miles apart—yet their opinions on the same subject are exactly opposite. These replies certainly startled me, but left me right where I was before I wrote to them. I thought that if I would bring June hatched chicks into laying by the middle of November, I could save considerable time, money and trouble, and when I asked the opinion of men who certainly are in a position to know, behold the results of my inquiries. I would like to see expressed, through your columns, opinions of other breeders, as the matter is of vital importance to me. L. P. Hext.

Savannah, Ga.

REPORT OF THE MISSOURI EGG-LAYING CONTEST FOR JUNE, 1914.

WE HAVE 1,040 hens in the contest and 425 of them were confined to broody coops some time during the month of June. This cut our egg yield to 16,430 eggs for the month, which now makes the grand total 106,579 eggs. Our pens have all made good general averages as a rule. But there has been no startling or sensational record thus far, and we are glad it is so. Nothing tends to discredit really helpful work more than these sensational and almost unbelievable records, even though they be absolutely true.

The White Leghorns from England are still gaining each month. They have made the best monthly record for five months out of seven. Someone said the whole secret of winning in an egg-laying contest was in having your birds ready to start off the first month with

289 Eggs RECORD FOR 1 HEN IN 1 YEAR **212 Eggs** AVERAGE RECORD FOR 10 HENS IN 1 YEAR

In addition to this, my birds won 296 out of a possible 305 firsts last year, 89 specials; 28 silver cups, one A. P. A. Gold Medal, 8 A.P.A. silver medals. Grand Breeders for sale. Send for special sale list. **BARRED ROCKS, COLUMBIAN WYANDOTTES, BLACK ORPINGTONS**

Madison Square Garden, N. Y., Winners. Since 1906 birds of my breeding and of my line have won at the leading shows the country over. Their record is history—commending them for highest quality and greatest possible worth. I offer mated breeders, line bred, in any desired number, having the largest farm and largest stock. **Eggs for Hatching** from selected pens, $5 per 15. From special matings, $1 per egg. Write me your wants and for catalog, please. **Whatglen Farms, Frank McGrann, Owner, Hiram Demmy, Jr., Mgr., Lancaster, Pa.**

White Orpingtons *Superb Type and Superior Quality*

January and February Hatched Youngsters for Sale

Never have I had young chicks prove more completely the claim made for them regarding TYPE and QUALITY than does my present young stock. It is indeed a remarkable line of cockerels and pullets hatched in January, February and March. As it is possible to detect any minor faults in birds after they are eight weeks old, and to form a pretty fair idea as to how they are likely to develop, I have placed on sale about 600 of the most promising White Orpingtons ever produced. These are ready for delivery now—large, vigorous, massive birds raised on acres of blue grass sod.

Older Stock at Bargain Prices

Due to the fact that I must make ready for this younger stock, it will be necessary to dispose of a number of hens and cocks on the breaking up of my breeding pens the first of June. These, of course, must go at attractive prices; and here is an opportunity to get some foundation stock, the stamina and vigor of which could only be arrived at through the wonderful blue grass range commanded by Russell Cave Poultry Yards as a branch of the renowned 8,000 acre Elmendorf Farm. An extra fine lot of young Duroc-Jersey pigs for sale.

I. K. Felch, Box 176, Natick, Massachusetts

a lead, and that was the only reason the English birds won in our contest last year.

This statement is not borne out by the facts in either of our three contests. The pen which won the first year did not get an early start, but did well in later months. The pen which won last year made a gradual gain over competing pens each month in the year. The pen this year which is leading has made a gain every month and its success is not due to its start, but to its breeding and capacity for laying. In our opinion, it is selection and breeding which means more than anything else.

The pens which are bred for egg production make much better use of their food than other pens. The pens which lay the most eggs usually consume a little more feed, but we also find less droppings upon the dropping boards in pens which lay best. This has proven true in all the weights and tests which we have made of the droppings.

The ten highest pens for the seven months are as follows: (Each pen is composed of ten pullets.)

Pen.		Eggs.
0.	S. C. White Leghorns, England	1,569
47.	S. C. Reds, Missouri	1,333
79.	S. C. White Leghorns, Pennsylvania	1,309
65.	S. C. White Leghorns, Missouri	1,277
18.	White Wyandottes, Pennsylvania	1,271
70.	S. C. White Leghorns, Missouri	1,248
9.	S. C. White Leghorns, Pennsylvania	1,244
53.	Barred Plymouth Rocks, Illinois	1,201
51.	White Plymouth Rocks, Arkansas	1,196
38.	White Orpingtons, Pennsylvania	1,192

The highest hen of each variety which has laid 150 eggs or over is as follows:

05.	S. C. White Leghorn, England	171
456.	R. C. Red, Missouri	158
180.	White Wyandotte, Pennsylvania	154
864.	Barred Plymouth Rock, Michigan	153
236.	Silver Wyandotte, Missouri	152
476.	S. C. Red, Missouri	150

The best pen record made thus far by representatives from the different countries is as follows:

	Eggs.
S. C. White Leghorns made best English record	1,569
S. C. Reds made best United States record	1,333
S. C. Reds made best Missouri record	1,333
S. C. White Leghorns made best Vancouver Island record	1,177
S. C. White Leghorns made best New Zealand record	1,130
White Wyandottes made best Ontario record	1,095
S. C. White Leghorns made best British Columbia record	1,057
S. C. White Leghorns made best Australian record	1,041
S. C. White Leghorns made best South African record	948

The ten pens which made the highest record for June were largely White Leghorns. Two New Zealand pens laid 221 and 226 eggs respectively, one of them being next to the English pen for the month. Pen 65, from Missouri, laid 226 eggs; No. 72, from Iowa, 224 eggs; No. 69, from Kentucky, 221 eggs; No. 70, from Missouri, 219 eggs; No. 79, from Pennsylvania, laid 215; No. 61, from Nebraska, laid 214. All of the above were White Leghorns. Pen 44, S. C. Black Minorcas from Missouri, and pen 57, White Rocks from Texas, were next with 212 eggs each.

The Mexican Athletic Club

THE regular meeting of the club was called to order by Senior Houdano. Several new members were enrolled after their qualifications were found to be A. No. 1.

Senior Campino read a paper on the use of other people's cuts in advertising. It made a great hit with some of the members and a number of them decided to take advantage of his suggestions in the near future.

Senior El Toro, the original M. A., said that the idea was not as new as it seemed and that it was part of the original proceedings of the first M. A. Club. By the way, let me tell you how the first M. A. Club was started, he said:

Once upon a time there was a young elongated specimen of the genus homo on whom the fond parents had tagged the handle of Ferdinand. The cracker barrel and checker guard at the store where Ferdy worked, however, called him "Slivers" for the reason that his symmetrical proportions inclined to the perpendicular rather than to horizontal breadth and thickness. He lived in a little village where the fair ones were still dancing the Virginia reel, and the tango and maxixe would pass for the name of some kind of tropical fruit. The favorite song of the Haymakers quartette was "Sweet Adeline," although some of the more frivolous members seemed to prefer such classy rags as "Hound Dawg" and "Alexander and His Band." This little burg of which I am speaking was so far removed from the apex of prominence that in the school geographies and in most of the railroad timetable maps it was not indicated by even the tiniest little speck. The daily arrival of the 12:40 caused business to be suspended in the stores on Main street and for the population to assemble on the depot platform to either see the train go by or drop off an occasional traveling salesman who did not know that the town was a bloomer. The train was generally from an hour to two late and as it was only a spur line the president's car never interfered with its schedule and enabled the crew to pick up here and there a can of milk and even accommodate a farmer by holding the train until he got through milking. This long delay did not affect the old timers, however, as it gave them more time to talk over politics, while the female species would gossip about the latest scandal in the neighboring town. During this daily exodus of the population to the depot platform young Slivers was the only living soul on Main street as he had to watch the store while the chief mogul was attending to his daily duty.

Slivers had worked at the village emporium for many years for what his boss called a "magnificent" stipend of seven iron men per week. He worked from 4:30 a. m. to the time the last checker game ended, which the proprietor and the village Doc started nightly at 9 p. m. Wednesday nights he was off duty and attended choirmeeting and at one of these athletic meets a fair young damsel sicced the bug on him for further orders and stung him to the core. Seven simoleons per week did not look good any more to Slivers after this and he forthwith struck for a raise of two bones per. As hired help was scarce the boss at last came across, and at the same time tacked on a 5 per cent increase on all goods to offset this extra expense. Slivers had heretofore only been noticed when help was needed in repairing the meeting-house or to carry water to the picnic grounds during the Fourth of July celebration, but this increased cost of living expenses being directly the result of his demand for more salary soon set the anvil chorus a going on the depot platform. The women folk especially were running on the high with the muffler cut out, and it did not take very long before our Ferdinand became a known quantity.

As the wedding was to be the following spring Slivers was scheming and

HAPPY HOUR POULTRY YARDS

W. FRANK BAKER, Owner. BLOOMINGTON, ILL.

"Mucho Vivo El Toro."

The main requisite of an advertisement is attraction, and nothing serves this purpose better than a first-class engraving of some prize-winning birds. It is, of course, understood that these birds must be one's own property—otherwise the attraction would be misleading. If the Happy Hour Poultry Yards intends to do this, we do not know; we know, however, that the White Orpington shown in the above ad, taken from R. P. J., belongs to the Aldrich Poultry Yards, of Columbus, Ohio, and the Silver Campine is none other than "Silver King," the well-known prize-winner at Chicago, owned by Frank Hering, of South Bend, Ind. Show your own birds, boys, and play the game square.—Ed.

Ten years ago the business commenced in a tiny yard on the East Coast of Lincolnshire, England, today I hold with a varied export trade all over the world with head offices in one of London's principal thoroughfares from where the trade can be more promptly dealt with, and have probably shipped more winners of the blue to America during the last four years than the majority of the other breeders put together. Our method is to give full value for money and win satisfied customers. I have now in some breeds a greater demand than can be supplied and importers are advised to inquire early. 1914 show birds will be ready from August onwards, only address

TOYNTON, SPILSBY, ENGLAND **Cable—Carey, Spilbys**

scraping to get the necessary funds together to feather the nest for Mandy and him. At the county fair he had subscribed for a poultry journal, which was offered "free" if you pay the postage and during train arrival Slivers used to read it to kill time.

One day he read in one of the advertisements how easy it was to make a barrel of money from chickens by simply feeding them table scraps. Another advertiser claimed that his chickens laid 300 eggs each a year. All this sounded good to our young friend and in his day dreams he already saw himself the proprietor of a quarter section covered with chicken houses and prize-winning chickens. As many of the advertisers offered to send a magnificent catalog free of charge he addressed a postal to quite a number of them. During the days following the catalogs came in bunches. Some of them were elaborate affairs printed in gold and colors; others again did not stack up with what he expected from the description and these he simply threw away. One thing he noticed, however, and that was how nearly everybody seemed to have Madison Square Garden winners or at least direct descendants. Some of the breeders had it doped out so exactly, that they were saying in their ads and catalogs "we won fifty-seven and three-quarters per cent more first prizes at Madison Square Garden during the last twenty years than all competitors combined." This line of confetti had Ferdy barking up the tree and nobody home, so he called a directors' meeting and explained the proposition to Mandy, the other member of the future combine. After giving the catalogs the once over Mandy decided on one with lace insertions, a double deck affair with a slit down the center panel.

By cutting down expenses and smoking the "Kalamazoo Special," which he could get three throws for a nickel, instead of the "Colorado Maduro" five-cent straight, and with his recent increase in salary, he managed at last to get enough together to send for a setting of eggs from "Special Pen No. 1," which, according to the breeder's catalog, were the "creme de la creme" of the flock and from Madison Square Garden winners. The eggs arrived in due time and nearly every one produced a chick and Slivers could hardly await the time of the coming county fair, where he had decided to make his first killing. When the chicks were full grown he compared them with the pictures of their supposed ancestors in the breeder's catalog from whom he had bought the eggs. One look and his vision of blue ribbon winners and silver cups began to get dim in his lamps. With diminished enthusiasm and best wishes for the breeder for a speedy descent into the region where calorified atmosphere is superabundant, he entered the birds for competition at the fair.

The poultry building had a long aisle down the sides and it was here where the poultry journals had their men with the lassoes. Slivers recognized quite a few of them for these were the wise gazaboos who knew that the towns around were good fishing places, and they came year after year. He noted the fat little fellow with the gray mustache was there on his accustomed place still offering his journal fifteen months for a quarter. A little further down the line he heard the familiar voice of the Irishman who was still wearing the linen duster and smoking the same pipe he had the year before. He was still asking everybody, "Did you get yours, brother?" "You are entitled to it if you live in the state," said the "rosy" cheeked, dark complexioned fellow. "Have you seen Judge Capps' paper?" said a little "guy" to him when he passed one of the stalls. A pretty blonde haired girl was throwing out the harpoon with "We will send it free if you pay the postage" and hit Slivers in a vital spot and signed him up three years for a half.

At last he came to the place where his chickens were in their cages. Great was his surprise to see that he had won every first prize in the class. That there was no competition did not make any difference, as he thought a bird must have certain points of merit to win first.

While he was still standing in front of his birds and wondering what to do next, somebody tapped him on the shoulders, and turning around he saw a well dressed stranger looking at him.

"I wish to congratulate you on your success," he said to Slivers. "You certainly have some beautiful chickens, and if the rest of the world only knew it, you could make money hand over fist. I am representing the 'Tellitall' poultry journal, the biggest and best in the country. Our circulation is close to a million and growing daily. I believe if you would give me a contract for 120 inches of space, our paper will bring you results that will surprise you." This was a new line of lingo which Slivers had not heard before. It listened mighty good to him, and he signed up in a jiffy. He remembered what the solicitor had told him about writing the copy for his ad, so he sat down and copied the breeder's ad from whom he had bought the eggs. "Every first and special prize," in big, bold type read the first line of his ad. "Direct descendants of Madison Square Garden Winners" read the next line. Then followed a lot of dope about the magnificent type and color of his

American Poultry Association

The poultry industry of this country amounts in the aggregate to one billion dollars per annum. These figures paralize the imagination.

The American Poultry Association is the largest live stock organization in the world and its membership is increasing with tremendous rapidity. On its roll are the leading breeders and representative poultrymen of Canada and every state in the union.

Every breeder, fancier, man and woman in the United States and Canada who is interested in poultry of any kind should join this great organization.

The American Standard of Perfection

The Standard of Perfection is the official guide for the breeding, mating and judging of all poultry. It gives a close and detailed description of every breed and variety of chickens, ducks, geese and turkeys, with illustrations from living models. This book is published by the American Poultry Association at an enormous expense and is the American authority. You can not raise poultry successfully without this American Standard of Perfection. Prices postpaid from the publishers of this paper. Cloth binding, $2; leather binding, $2.50. Send all orders to American Poultry Journal, 542 So. Dearborn St., Chicago, Ill.

On its shoulders rest this gigantic Billion-Dollar Industry.

Your interests will be promoted and safeguarded. You may compete for the association diplomas and gold and silver medals at the shows, and be entitled to all the help that honest organized effort can give you.

You will have a voice in shaping the course and policy of the association. Making it recognized by nations and governments. Your name should be one of the thousands of the honored members of this association. We urge you to write immediately for information and application blank. Address

E. B. THOMPSON, President, Amenia, New York
S. T. CAMPBELL, Secretary
American Poultry Association, Mansfield, Ohio

"strain." The ad wound up with "magnificent catalog free."

He was up against it for fulfilling the last part of his ad. He knew printing and pictures by high priced poultry artists would cost a whole lot more than he anticipated, so he called another directors' meeting and Mandy again solved the problem in a hurry. "You poor Simp," she said. "All you've got to do is to tear the pictures out of that fancy catalog we got at home and send it to the fellow in the city who you met at the fair. He will put in a few extra feathers and a new background; then he will make a cut from it and it will be just as good as the one that was in the book, and won't cost nowhere near the money." Giving the birds such fancy names as "Bullduram," "Don Bunco," etc., he was soon fixed up with illustrations and as the printer of the County Clarion agreed to take eggs for his share of the work, he was soon sailing in smooth water. During the following winter he entered his birds at several shows and joined several clubs and societies and came in contact with many other fellows who had entered selling platers in stake races and copped off the kale when the going was easy. These fellows never showed their best birds, and in their conversations they were always throwing the bull about the good ones they had down home and which had the winners skinned a mile. During one of these talkfests Slivers suggested the starting of an athletic club for the benefit of developing this throwing power, and as a result the Mexican Athletic Club was organized and Slivers elected president.

This, gentleman is the story of the organization of a club that has members now in all parts of the world and its best specimens you will always find among the chicken cranks.

Well, boys, I've got to catch the ten-forty and if one of you will ring for a little lubricator for my carburetor, I think I'll just about make it.

Remember, if the tools are not to your liking return them and we will refund your money, or if you prefer, will send tools C. O. D. and you can just pay the mail carrier for them.

GEORGE BEUOY, Rural Route No. 7, Cedar Vale, Kan.

CORNISH FACTS.

THE justly merited popularity of the Dark Cornish fowl is solely due to the sterling qualities of this grand old breed, and I am glad to see that they are at last near the top.

Having bred them for over twenty years, I believe I am qualified to speak in their behalf. At one time or another I have bred nearly all the leading varieties recognized by the American Standard of Perfection and have found the Cornish (Dark) or Indian Game, as they were called when I first began breeding them, will fill the general requirements of the majority of people better than any other breed. In the first place, they are the very hardiest variety in existence, grow rapidly on small rations and do not have to be pampered when small. As their plumage is very short, food that in most varieties goes to produce feathers, in the Cornish produces meat and of the purest possible flavor, rivaling that of wild game. Secondly, their enormous size, broad deep breasts, large thighs and fat backs (there is as much meat on a Cornish fowl's back as on the breast of some varieties). Again, as mothers they are unequaled, carrying large broods and caring for them with the instinct of a wild fowl. As sitters they are remarkable; in all my experience I have never had a Cornish hen to leave her nest even in the coldest or hottest weather.

A great many wise people, generally those who have never seen or owned a good Cornish, assert that they are indifferent layers. This I emphatically deny, as it is not true in any sense.

In all breeds there are certain strains that lay well and others that do not. Egg production is very much due to breeding and feeding. Cornish hens, when kept on free range, will lay as many eggs as any breed that is not forced for egg production, and will in many cases outla- the much touted and widely advertised breeds we hear so much about.

Another great thing in their favor is that they breed true to type and color, and do not require double mating; have small pea combs, which zero weather will not freeze, and are beautiful to look at and most docile, and of a very peaceful disposition. I frequently have 20 to 30 males running together.

If you have never owned a Cornish, give them a trial, and I am sure you will always be a lover of this grand old breed.—Courtland H. Smith in American Cornish Club Annual.

To Prevent Frostbite.

Q. (1) How can I prevent the combs of my S. C. cockerels from freezing in zero weather I have an open-front type of house, with a muslin curtain in front and burlap in front of the roost. How do other breeders, keeping stock for sale, prevent frostbitten combs?

A. (1) Keep only strong, vigorous stock. Give the birds good care and feed well. Don't let them go to roost with empty crops. Don't let them get out of condition through careless feeding and watering. Sun and air the interior of house well on every sunny day. Keep the birds busy. The curtained roosting apartment may be all right if not to tightly shut in, but it is our experience that single-combed birds prove more susceptible to frost bite when curtains are used than they do where there are no curtains. If curtains are used, keep them free from dust and be sure to air out roosting place every day. On extremely cold nights a little vaseline rubbed into the comb at roosting time will often prevent frostbite. We do not take any measures to prevent combs freezing. We use entirely open front houses; when possible, try to keep them filled to capacity, and do not have the roosts either too high up or too low down; simply try to provide ample room on back roost for the tallest male to stretch and crow without bumping his head. The birds are selected for health and vigor and are fed and managed to keep them in that condition. Ordinarily they stand pretty severe cold spells without frostbite. Now and then some get nipped.

Q. (2) Would you suggest a cement floor, 8 or 10 inches above the ground, for a curtain front house, or would a double wooden floor 18 inches above ground prove better?

A. (2) In most locations a well-made cement floor, raised a few inches above ground level, gives very satisfactory results. If kept well littered, it does not prove too cold. The raised, double-wooden floor is a good, warm floor if well built and kept well littered, but it is more difficult to keep clean than the cement.

Q. (3) My Campines seem very susceptible to colds and roup.

A. (3) While some strains of large-combed, small-bodied breeds sometimes appear quite delicate and susceptible to catarrhal troubles, it is not necessarily the fault of the breed. By proper selection, open-air housing at all ages, and breeding for health, you can so improve and harden them that they will have greater resistance to disease and cause you little or no trouble. Where fowls are apparently particularly susceptible to roup and colds, the fault is usually largely in the breeding and management. Most breeds are naturally hardy and those which appear susceptible to disease are generally rendered so by close housing and coddling that makes them delicate.

Q. (4) What does dubbing a cockerel mean?

A. (4) Cutting off the comb and wattles close to the head, as is done with Games.

Q. (5) Is there any sense in the idea that if a Leghorn male happens to get into a pen of R. I. Reds for a day that even a year or more after that time the progeny from those Reds will show white feathers?

Binghampton, N. Y. L. J. B.

A. (5) After the first month following accidental crossing, you need not fear contamination if the birds are kept free from foreign males. Red chicks may show some white in plumage during development, but will molt it when putting on adult feathers and it is not necessarily an indication of contamination.

Feeding Questions.

Q. (1) How much feed should one give a bunch of 500 pullets for their winter ration to insure good laying, corn, wheat and oats?

A. (1) We don't feed by measure. The quantity of grain required will depend upon the appetites of the birds. Would supply the grain in mechanical feeders and let the birds help themselves. Four "automatic feeders," six-

EARLY WINNING SHOW BIRDS

Hatched in January, February and March of this year

I now offer the finest early hatched exhibition Barred Plymouth Rock cockerels and pullets that I have ever produced. They show elegant size and shape, fine heads and deep narrow sharp clean cut "Ringlet" barring—they are my richest New York first prize blood of the shows of 1912-13 and 1913-14.

These Birds are Ready to Win at the Fairs and Early Shows

The demand for early show birds will be enormous this year and I strongly urge you to place your order as soon as you can. I will hold birds ordered and ship when wanted—the prices will be very reasonable.

I Offer Early Hatched Breeders Also. See My Ad of Bargain Sale of Yearling Birds on Page 1082.

Richly illustrated 76-page catalog mailed upon request. It is full of illustrations of New York winners from life.

White Wyandottes and
S. C. Rhode Island Reds

Are Ready to Win
Any Fall Fair in America

If you need a cock, hen, cockerel, pullet, old pen or young pen to complete your string, write me the show you wish to win and receive my price by return mail.

Owen Farms Readiness

has resulted in THOUSANDS of FIRST PRIZES being WON by customers all over the UNITED STATES and CANADA, and in this year of general shortage of early hatches our youngsters will make an even better record than in former years, as we have more JANUARY, FEBRUARY and EARLY MARCH CHICKS than ever. **Order early and enable us to put your birds in perfect condition for your show.**

The Utility Qualities

of our birds are unexcelled by any and famous the country over. Perfect housing and breeding conditions, combined with perfect health and vigor, have resulted in strong, husky, big boned birds that lay and pay.

Big husky cockerels in all varieties at $3.00, $4.00 and $5.00 each NOW that will be worth more later. Splendid utility pullets at $3.00 each NOW that will be gems for utility breeding the coming season. I want to reduce my large flocks of youngsters while still on range, so as to have plenty of room in winter quarters. **Buy now before the supply is exhausted.** Later prices will be higher, as the supply through the country is fully 40 per cent short this year.

WINTER SHOWS

You are already looking forward to winning your Winter Show and watching particularly promising youngsters as they develop. Your favorite cocks and hens are moulting and you are wondering if they will round to in time to be at their best to win for you. This is the time to take up with me the question of strengthening your weakest spots, as I will book your order upon receipt of a 25 per cent deposit, balance to come before shipment, and you will have the immense resources of Owen Farms behind you to make your victory certain. Have already booked a number of orders for Fall and Winter showing, and **REMEMBER, I will not sell to two customers to compete in same classes.**

Breeding Birds

It is probably a little early for you to definitely plan your matings for next year, as you want your old birds to complete their moult and your young birds to fully develop. When you do decide what you are needing, write me and see if I cannot give you the exact bird or birds you must have to make your 1915 matings stronger than ever. **Owen Farms Prices Are Lower,** quality of individuals and line-bred producing qualities considered, than similar quality can be obtained elsewhere.

OWEN FARMS

107 William St., Vineyard Haven, Mass.

MAURICE F. DELANO, Prop. FRANK H. DAVEY, Supt.

teen-quart size will feed 125 laying pullets comfortably and require filling about every four days, for whole grains; proportion usually two feeders filled with corn, one with oats and one with wheat. The dry mash and scrap should be supplied in hoppers. Quantity of each food eaten will vary from time to time and all feeders and hoppers will vary as to quantity of contents on filling up day.

On a practical egg farm it was demonstrated in handling good sized American class fowl that one heavy layer would consume in one year in addition to a large amount of fresh greens the following amounts of food: 60 pounds cracked and whole grain, 30 pounds ground grains and mill-stuff, 8 pounds beef scraps, 4 pounds of oyster shells, 2 pounds of grit and 2 pounds of charcoal.

Q. (2) Should hens be given wet mash in order to have them lay well?

A. (2) It is not necessary, but some poultry keepers prefer it.

Q. (3) How many layers should be kept in one house and do they do better if no cockerels are with them?

Benson, Neb. E. S. C.

A. (3) 100 to 125 layers make a very satisfactory flock when housed in a 20x 20-ft. open-front house. If only market eggs are wanted, the pullets are better off without males.

Sudden Death.

Q. At feeding time, found one of my hens on the floor, as if she were wallowing in dust bath. Picked her up and she seemed paralyzed. She seemed fat and in good condition. A few minutes after I picked her up she died while I was working over her. What was the cause?

A. Hen was probably overfat internally and died from rupture of blood vessel. Sudden death from such causes is quite common.

Wants to Get Larger Eggs.

Q. I am in the poultry business in a small way and expect to grow. Have 62 layers and sell all eggs to private trade. I am not satisfied with the size and weight of the eggs I get. The eggs run about 25 ounces to the dozen and I would like to get them up to 27 or 28 ounces the dozen. I now feed 1 part ground oats, 1 part cornmeal, 1 part middlings, 2 parts alfalfa, and 2 parts bran, with about 5 per cent green cut bone. This mash is before them all the time. Mornings I scatter scratch feed in litter and nights I feed corn. They have green food and I am getting a good supply of eggs. One-third of my flock are two-year-old breeders.

Philadelphia, Pa. G. A. B.

A. Would make that mash 100 pounds each of cornmeal, ground oats, middlings, gluten feed, bran, alfalfa and beef scrap. If that doesn't help put weight into the eggs, would get fowls that produce larger eggs. Would not carry so large a percentage of two-year-olds.

Black Minorcas.

Q. (1) I have a flock of Black Minorcas and the cockerel has a few brown feathers in neck plumage and the hens have a few white feathers under wing that cannot be seen without lifting wings.

A. (1) Off-colored feathers are defects. Pull them out and the new feathers may come in black. More than

one-half inch of white in any part of plumage or two feathers tipped with positive white disqualify.

Q. (2) How many points should there be in combs of cockerel and hens?

A. (2) Six distinct points.

Q. (3) What are the correct weights?

A. (3) Cock, 9 pounds; cockerel, 7½ pounds; hen, 7½ pounds; pullet, 6½ pounds.

Q. (4) Should the plumage be jet-black or a greenish-black?

Maywood, Ill. M. V.

A. (4) Surface color should be a lustrous greenish-black.

Aspergillosis.

Q. What is wrong with some of my White Orpingtons? Hens go about with tails drooped. Eyes are watery. Throat is swollen and mouth is covered with yellow canker on tongue and extending into throat.

Sarona, Wis. V. L. W.

A. Trouble is probably aspergillosis, a disease caused by moulds of the genus Aspergillus. No satisfactory remedy has been found for this disease once it has become established. The treatment is wholly preventive. Avoid musty and mouldy foods, damp mouldy litter, foul houses and runs, and particularly mouldy leaves and dark swampy runs, where there is much rotting vegetation. Fowls on sweet soil, housed in dry, clean houses and allowed no mouldy food seldom are attacked.

Pit Games.

Q. Please send the address of some breeders of Pit Games. I want to buy some and to read about Pit Game chickens.

Staples, Texas. E. L. A.

A. Handling Games for fighting purposes is illegal. You will find the advertisements of breeders of exhibition Game fowl in this issue. We do not encourage the breeding of Pit Games.

Eyes Change Color.

Q. Do the eyes of Silver Wyandottes change color as they grow older? I purchased several sittings of eggs from two different breeders. I supposed that I was getting their best eggs. The chickens which hatched appear to have green or nearly green eyes instead of bright bay or red. I have always before used eggs from my own flock but did not think about the color of their eyes until they were much older than these. They are six days old but I would not suppose that the eyes would change color a great deal.

Kendall, Wis. S. R. S.

A. The eyes of young chicks show considerable change in color during development. Sometimes the eyes change color after maturity, but then it is usually loss of color. Would not worry about your chicks. Probably a good percentage of them will have bay eyes at maturity.

Miscellaneous Questions.

Q. (1) What do you think of this dry mash: Wheat bran, 100 pounds; white middlings, 100 pounds; beef scraps, 50 pounds; corn meal, 50 pounds; buckwheat middlings, 25 pounds; oil meal, 20 pounds?

A. (1) We should prefer equal parts by weight of bran, middlings, corn meal, ground oats, gluten, alfalfa and beef scrap. Do not care to feed either

Riley's Barred Rocks

I offer my breeding birds at bargain prices. A fine lot of yearling cocks, both matings. I have the most promising young stock I have ever owned and it will pay you to write me about a winner for the coming season. Mention American Poultry Journal.

buckwheat middlings or oil meal and believe they are very liable to cause indigestion.

Q. (2) Would the above mash be good for young chickens if the beef scraps were screened and about 10 pounds of powdered charcoal added?

A. (2) We would not use charcoal in the mash. The mash formula we give as a substitute for yours is all right for chicks over three weeks old.

Q. (3) Have you ever fed dried brewers' grains to poultry?

A. (3) No.

Q. (4) Do you recommend cutting spurs on cock birds when they tear the hens? How?

A. (4) Yes. Trim blunt with a sharp knife but don't cut into the quick. Also pare off the sharp edges of the toe nails. The toe nails tear the hens more frequently than do the spurs.

Q. (5) How would you proceed to dub a bird and stop the flow of blood? Wilkes-Barre, Pa. D. D.

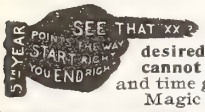
A. (5) We simply cut off comb and wattles with a sharp scissors and let the wound bleed. It will soon stop. Keep bird by itself until wound heals. Free bleeding will do no harm.

Feeding Troubles.

Q. We have 1,000 laying hens and for last week or two they have been off feed. We have been feeding very regularly and as far as we know have not given them anything to turn them against their food. First thing in morning they are given warm water. About ten o'clock we feed oats which have been in warm water for about an hour. At noon they get a wet mash of alfalfa, meat scraps, bran, low grade flour. At night they have corn in litter, so they will have enough to scratch for in morning. What can we do to get them back to feeding again and why did they go off feed?

Carrollton, Mo. L. F.

A. Too much warm water and soaked feed, also probably too much thrown to the flock at a feeding. Cut out the warm water. Give them clean cold water to drink, and keep it before them. Stop the wet mash and the soaked oats for a week and feed a little hard corn and oats once a day. Use mash not oftener than five days a week. Instead of soaked oats, try sprouted oats at noon. For the mash try a mixture of equal parts of weight of bran, middlings, corn meal, ground oats, gluten, alfalfa and beef scrap. See articles in December and later issues of A. P. J.



Quality of Poultry at Fairs Getting Better Each Year.

If we could compare the poultry that used to be exhibited at state and county fairs ten years ago with the fowls on exhibition today, the enormous improvement in the quality of standard requirements would be noticeable at a glance. There 's a reason for this. Years ago the poultry exhibit at fairs consisted mainly of those varieties and breeds exhibited by "carload men" and after they had been taken around from one fair to another they were in a pretty ragged condition if not filthy and diseased. Large breeders would not take any chances therefore and exhibit their birds on account of this class of competition, for the reason that the value from an advertising standpoint was not worth the paper on which their ads were printed. Let us take a glance at some of the fairs of today, for instance, Allentown, Hagerstown, New York, Ohio, Indiana, Illinois, Missouri, Minnesota, Tennessee and Alabama. The exhibits at these fairs are equal to some of the best shown at the winter shows. Some of the foremost breeders in this country send their best birds to these fairs and the keen competition they have encountered there is the reason for the ever increasing quality of the birds shown. There is still another reason. Years ago the handling of fairs throughout the country was mainly in the hands of politicians and as these men were not always familiar with poultry affairs the exhibits suffered in consequence and likewise the judges which they engaged were not always the best. Many of the superintendents of the fairs nowadays are experienced poultrymen and this is responsible for the quality of the exhibits shown. Theo. Wittman at Allentown, O. L. McCord at Illinois, E. Murphy at Indiana, Martin Schultes at Tennessee, are known the country over as expert poultrymen and judges, hence the exhibits at their fairs equal in quality and exceed in quantity many of the winter shows. In order to make the coming Tri-State Fair at Memphis, Sept. 26 to Oct. 3, instructive to the exhibitors and to the people attending the fair, the hustling Mr. Schultes has engaged the well-known judges, Mr. E. C. Branch, member of the standard revision committee and Mr. Louis Stahmer of the American Poultry Journal. Mr. Stahmer has without any doubt the finest set of lantern slides in the country pertaining to thoroughbred poultry. He will lecture daily and show the winners at some of the largest shows, thus enabling exhibitors to compare their stock with them. His slides also cover the subject of diseases, housing and many other interesting subjects pertaining to poultry and the lectures will, no doubt, be well attended and prove to be a valuable feature of the poultry show. Mr. E. C. Branch is a most conscientious judge and knows standard requirements from A to Z and is not afraid to apply this knowledge when judging. Mr. M. Schultes, Albashire, Bartlett, Tennessee, will be glad to furnish information to intending exhibitors.

The Poultry Silo

A Silo is a receptacle for green food, the same as the housewife preserves fruit or sugar corn for winter use.

The Poultry silo is the coming thing, as it solves the feed problem once for all. Keeps poultry all winter the same as on range in summer — the cheapest and best food possible. Saves time, labor and expense. You will pay for a silo whether you put up one or not. We have made the plan so simple that anyone can erect one, at the lowest possible cost. Complete set of blue prints and instructions for $1.50. Also little booklet "Poultry Silage"

The Poultry Silo,

Box 35, New London, Mo.

August and the round-up.

* * *

The westerners need not bring their ropes, for the convention promises to be a busy one, with no time for the sport of the plains.

* * *

Let everyone interested in poultry make an effort to attend the Chicago meeting. The American Poultry Association wishes to make itself beneficial to all interests, and its real worth depends largely on the support given. Come, lend your aid to make a better and larger association.

* * *

Symmetry will have the fight of its life, as it is commonly understood it has no cause for existence. Typical carriage, if made part and parcel of every variety, described with each and a value placed, would be far better and far more reasonable to our mind.

* * *

We think the Plymouth Rock weights should be reduced as has been proposed and hope this change will be made at this meeting.

* * *

Years of experience has convinced us that in all varieties the happy medium-sized birds have been the most vigorous, the best layers, the earliest layers and the most practical in every way, while the larger specimens mature slowly, lay less and after a short period of prime condition are most apt to get sluggish and expensive boarders.

* * *

We, with others, urged the last meeting to adopt this change and were defeated. After the meeting a prominent Campine breeder told us they were sorry, but they had to vote against our contention for the reason that if the new weights were adopted the Plymouth Rocks would hurt all varieties more and the Campines in particular.

* * *

Would it not be proper to have a rule so that the judges and the breeders of each variety have the say of each variety? We believe that most Plymouth Rock breeders wish this change in weights and will vote for it, and we also hope that breeders of other varieties will keep hands off. We want to see the men whose interests are in the different breeds say what those breeds should be.

* * *

This has been the warmest and driest spell had in this section for over forty years. So they tell us.

* * *

It's jes' about as hard to pick good advice as it is to do your own thinkin' in the first place.

* * *

Miladi says you must not be too literal when the grocer tells you he will make all bad eggs good.

* * *

"A daughter of the regiment" has been born to Mr. and Mrs. J. Courtney Punderford. We extend our hearty congratulations and are pleased to know the mother, child and father are doing well.

* * *

Reports received from many breeders are most encouraging, for all point to a select crop of youngsters. Quality is the feature they glory in, so even with a short crop this quality will make up for missing numbers.

* * *

It is not a question of how many but one of how good that counts. The man that can raise 200 chicks properly stands to make good, and if he can get a 50 per cent egg yield his success is assured. Insist on returns and increase your plant a long as this same ratio can be made until you find your limit, then stop.

* * *

Lydia—When Jack met Billy and me out walking I found it very hard to conceal my dismay.

Alice—I imagine; it's so hard to conceal anything with the present styles.

* * *

And many gems of thought turn out to be paste.

* * *

Received copy of the American Cornish Club catalogue. It is one of the best we have seen and a credit to the breeders of this variety. It is chock full of good articles and many handsome illustrations. If more people better understood this variety, there would be many more breeders of this substan-

tial breed. The book sells for 50 cents and can be had from the secretary, Mr. John W. Ward, Pennington, N. J.

* * *

Mrs. Beat: "Tell the gentleman I'm not receiving today, Nora." New Maid: "But he ain't deliverin', mum; he's collectin'."

* * *

The Buffalo, N. Y., show, with W. C. Denny as secretary, will be held Thanksgiving week. This show last year, with Drevenstead as secretary, was the feature of the show season. Billy is a hustler and we wish him the same success. The judges are Geo. H. Burgott, Chas. D. Cleveland, J. H. Drevenstedt, James Glasgow, Charles McClave, William McNeil, Richard Oke, James Tucker, A. O. Schilling, H. P. Schwab, G. W. Webb, W. C. Ellison.

* * *

The Trenton, N. J., Fair has for years been one of the great early shows, and the poultry department has been an annual feature of the fair. This year's dates are September 28th to October 3d. Mr. Harvey E. Rogers is superintendent and will gladly furnish all information. His address is 1520 East Clinton avenue, Trenton, N. J. Hope to meet you there.

* * *

At this time, July 15th, eggs are selling in Rochester at from 30 to 35 cents per dozen, and at this time there are poultrymen within twenty miles of the city that are shipping in eggs in ten and fifteen dozen lots daily to special trade at from 20 to 22 cents per dozen, charges paid.

* * *

Here it is evident that the poultrymen are not getting their due, for this same trade would willingly pay the best price and glad to get them at that. The selling of eggs and poultry should receive more care and the best prices obtained to insure the best profit.

* * *

This same applies to all sections. This spring we saw a farmer deliver three baskets of eggs to a dealer within forty miles of Philadelphia and receive in trade a price that at that time was just 14 cents a dozen less than the Philadelphia price.

* * *

We were pleased to note that Mr. J. C. Fishel was appointed postmaster of his home town, Hope, Ind. Our congratulations.

* * *

The eggs from the Orient
I view with alarm.
But if I don't eat them
They'll do me no harm.

* * *

Some friend (unintentional) has sent me the following:

If I had a thousand lives to live,
I'd live them all for you;
If I had a thousand hearts to give,
You'd get the thousand, Sue.
On the other hand, in the winter's storm,
When you're so cold you're blue,
If you had a hundred feet to warm,
I'd warm them all for you.

* * *

Frank Platt may not be guilty, but if we thought so we would dedicate the above to him.

* * *

Reports say that we are to have a new weekly poultry journal, with Messrs. Robinson and Green in charge. There's room for more if it's a good one, and these men are a guarantee of that.

* * *

Never try to substitute anything for tact, push or principle.

* * *

The feeding question is one that bobs up serenely every month of the year. If our friends would read their journals carefully they would find that Dr. Woods has written much on this subject and would also realize that we cannot handle it fully here. In these Chats we just sit on a fence whittling and passing a few remarks for others to think over.

* * *

Corn, wheat, oats and other grains are all good, substantial foods; variety of food is essential, for now fowls will do well if either overfed or underfed on any one grain; mixed they do very well, but it is partly up to you to find the proper proportion at which they will do best according to your other conditions of housing and range, etc.

* * *

The American Poultry Journal Year Book for 1914 has one of the best feeding articles we have seen, treating all sides of the question.

* * *

The following letters will explain themselves:

Boston, Mass, July 11, 1914.

Dear Sir—I found a hat marked W. B. A. on my roof the other day, and as it had a feather of a Barred Rock stuck in the band thought you may know the owner, as it evidently belongs to a hen man. Please advise. Yours truly,

B. B. Beans.

Irondequoit, N. Y., July 14, 1914.

Dear Sir—Thank you very much. I know the owner of the hat and wish you to preserve it in moth-balls and store it in a safe deposit vault. I will call for the hat in January. This helps to clear a great mystery. Yours very truly, H. P. Schwab.

* * *

This will have to do for now. We hope to meet our friends at the Chicago convention.

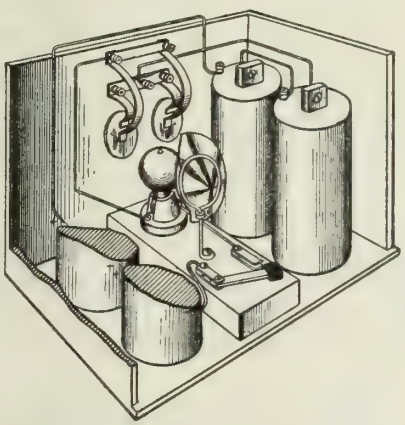
Recent Inventions for Poultrymen

By Lester L. Sargent, Patent Attorney, Washington, D.C.

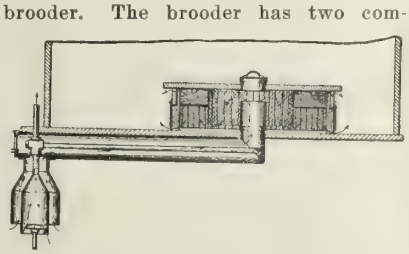
A BROODER designed by William T. Rolph, Geneva, N. Y., has a compartment frame of wire screening suited for confining young chicks in separated groups in the compartments, and thus prevents crowding of



Brooder, patented June 2, 1914, by William T. Rolph, Geneva, N. Y. No. 1,098,531.

the chicks, which might result in suffocation. The screen frame may be lifted out vertically from the floor of the brooder when desired. Patent 1,098,531.

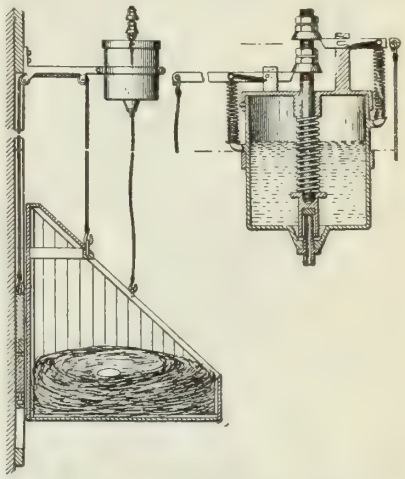
A new poultry-feeder, the invention of Frederick A. Zimmer, Covington, Ky., has a series of hopper members with slanting walls so as to leave open feeding spaces for the poultry on each side. The particularly novel feature of the invention resides in the corrugated bottom, which has a longitudinal inverted V-shaped portion of the floor, which prevents the fowls from scratching feed out of the hopper. The roof is hinged. Patent 1,099,331.



Albert E. Graves, Lenexa, Kan., is the inventor of an electrical egg tester. In this device the circuit is closed when an egg is placed in position for testing, thus turning on an electric

Electric egg tester, patented June 16, 1914, by Albert E. Graves, Lenexa, Kas. No. 1,100,556.

light. When the egg is removed the circuit is broken and the light is out and no current wasted. The illustration shows the device arranged for testing two eggs at a time. Patent 1,100,556.



Harmon A. George, Petaluma, Cal., has a somewhat novel heating arrangement for his new brooder. An air heating system supplies the inlet with pure warmed air and discharges all products of combustion outside of the brooder. The brooder has two com-

Brooder, patented June 16, 1914, by Harmon A. George, Petaluma, Cal. No. 1,100,368.

partments, one curtained off from the other. One may be heated to a greater temperature than the other, so that chilled chicks may be quickly warmed in it and afterward pass to the cooler compartment. Patent 1,100,368.

An automatic hen-marker is the somewhat extraordinary invention of Frank H. Preble and Kellum D. Grant, both of Philadelphia. Its purpose is to automatically classify hens as to their propensity to enter a nest. The nest is hung so as to operate the valve in a liquid container suspended over the

Automatic hen marker, patented June 2, 1914, by Frank H. Preble and Kellum D. Grant, Philadelphia. No. 1,098,971.

nest and cause a drop of coloring fluid to escape and drop on the hen's back

Summer Sale of Rancocas Stock

Rancocas have in their breeding yard over sixty birds that have won at such shows as Madison Square Garden and Palace Show, New York City, New York State Fair, New Jersey State Fair, Boston, Philadelphia and Hagerstown. We have hundreds of early chicks bred from them that are coming on splendidly. We propose for the first time in the history of the farm, to hold a summer sale, and to offer at reduced prices some of our record birds, together with 200 other choice specimens.

This will be an unusual opportunity to secure White Leghorns and White Rocks that have won national fame. The sale will include White Leghorn males that have won as follows: First Cock at Philadelphia, 1912; First Pen Male at Philadelphia, 1911; First Pen Male at Boston, 1913; First Pen Male at Madison Square Garden, 1910; and such famous White Rock males as Second White Rock Cockerel, Boston, 1913; Third Cockerel at Madison Square Garden, 1913; Fourth Cockerel at Madison Square Garden, 1913, and Fourth Pen Male at Boston, 1913. This sale will include many other record birds and choice breeders. Write for our summer sale catalog.

WHITING'S WHITE DIARRHOEA REMEDY

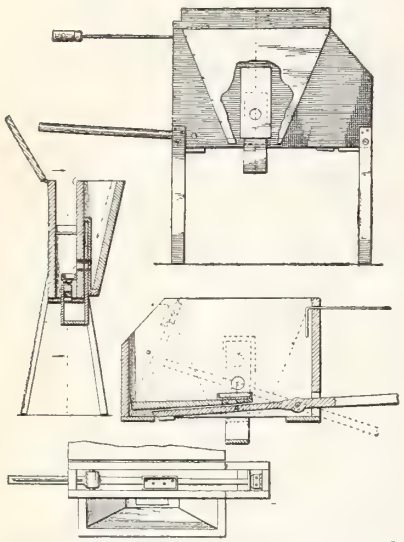
CURES AND PREVENTS
White Diarrhoea, Chicken Cholera and Bowel Trouble
and makes your chicks
Grow Faster, Stronger, Larger

All poultrymen, except those who use Whiting's Remedy, know they never raise more than half the chicks they hatch—White Diarrhoea kills them. We guarantee Whiting's White Diarrhoea Remedy will enable you to raise practically every normal chick hatched.

One 50c bottle treats 150 chicks and saves the 50 per cent of them that you have been losing right straight along.

Get a bottle of Whiting's White Diarrhoea Remedy today. Biggest breeders depend upon it. 50c and $1 a bottle.

Whiting's Roupene cures Roup, Canker, Diphtheritic Roup, Sorehead, Limberneck, Colds, Pip, and leaves no bad after effects. No quarantine necessary. **50c & $1.**



Whiting's Remedies are sold by dealers or mailed by us on receipt of price.

O. K. CO., Dept. 39, 157 Water St., NEW YORK

to distinguish fowl that frequent the nests. Patent 1,098,971.

James T. Howard, Warren, Md., has patented a new chicken feeder and exerciser. It is of durable construction and easy to operate. Feed bait attracts the poultry to hop on the lever, which is thus depressed and the feed widely scattered from the feed pan. Patent 1,099,443.

Feeder and exerciser, patented June 9, 1914, by James T. Howard, Warren, Maryland. No. 1,099,443.

WIND-PROOF POULTRY HOUSE CONSTRUCTION.

Practical Instruction for Making Tight Joints at Eaves and Foundation.

IT IS A DECIDED advantage in open-front housing in cold, windy climates to have the roof, sides and rear of the house wind, rain and draught proof. By the use of roofing fabric it is comparatively easy to make the four sides tight, but the real difficulty comes in closing up the eaves to completely exclude wind or beating rain and retain a neat, pleasing appearance for the building as a whole.

A building of any size which lacks an overhang of roof loses 50 per cent of its possible attractiveness. Overhanging roofs cost a trifle more than the flush variety, but are worth the extra money. We have a 60-foot open-front breeding house built with a drop front of two feet and a roof projection of fifteen inches at sides and rear, which faces directly upon Lincoln highway and an interurban line, which has gained us many customers by its pleasing appearance, people coming in primarily to examine the building, but who go away satisfied customers.

The usual plan of making a flush roof and then turning the edges of the roofing down over the sides makes the house look like a box and affords no protection to the sides from the drip of the roof. On a large house a projection of at least a foot is a decided advantage, but to build it economically and make it tight without the aid of skilled labor sometimes "stumps" the average poultryman and amateur builder.

The usual custom of cutting a board to fit around the projecting rafter ends and nailing it over the siding is not sufficient for a wind-proof joint. Shrinkage of the lumber will open up good-sized cracks and it is a difficult matter to make a fit at all joints at the start.

The accompanying drawings show the easy and inexpensive methods which are used on all of our large and colony houses. We do not believe in "frills" of any sort, but we have found that sound, durable construction pays a dividend every year, particularly upon the poultry plant.

For a 20x20 foot house or houses of similar size, the roof should project one foot on all sides; for larger buildings, from one to one and a half feet will be about right. For a colony house 8x10 or 8x12, six or eight inches overhang is sufficient, and for the 8x8 A houses we have a special form of cornice described subsequently.

Fig. 1 shows how an air-tight eave is made at the rear of the house. The rafters are sawed in the shape designed and a 1x12 board (for a one-foot projection) is nailed to their undersides. The rafter ends can then be cut off flush with this board. This frieze board does not have to be of cypress or white pine. Yellow pine, if clear and sound, will answer nicely. For 8x10 shed roof houses, we use No. 2 1x6 yellow pine

S. C. Red "Aristocrats" await you, bred from my MADISON SQUARE GARDEN BLUE RIBBON WINNERS. Wonders for color and type.

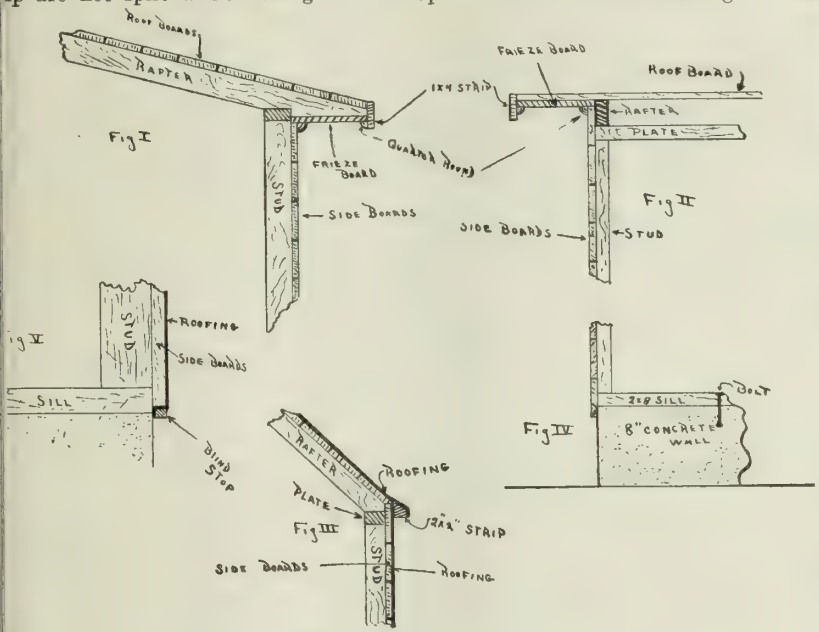
ENGLISH AND AMERICAN

OUR SPECIAL SALE

with greatly reduced prices is being appreciated and the bargains are many. By the large saving in various ways in consolidation we are in position to save you money.

Never in the History of the Fancy Poultry Business

has anything been done that will improve conditions and assist the poultry buying public in reduction of prices as will the uniting of these successful farms. Our saving is enormous and our customers are going to reap the benefits. No need to go into details about the **quality** of the fowls we offer you, as the records won for the past years are proof positive **there is no better.**



DO YOU WANT TO WIN? WE CAN SUPPLY YOU WINNERS

for your fall show. Our SERVICE DEPARTMENT will buy or sell for you anything in the way of Poultry, Dogs, Animals or Ornamental Birds. THE BEST IN POULTRY FEEDS, the kind we know of over thirty years' experience will give results. The United Poultry Farms beg an opportunity to prove to you their ability to give you better value for your money than you can secure anywhere. SALE LISTS FREE. Special Prices on Eggs and Chicks.

ADDRESS BOX A, INDIVIDUAL FARMS, OR

SCOTCH PLAINS, N. J. **UNITED POULTRY FARMS** HOPE, INDIANA

ces for this purpose and they do as ll as higher priced material. The ing is then fitted up tight to this ard and a 1x4 strip nailed to its edge d the rafter ends. The joints are cked with quarter round and when ll painted this makes an air-tight nice and one that will last as long the building stands. Care must be ten that the frieze board and 4-inch ip are not split when nailing. Fin-

ing nails are best used for this pur- e.

ig. 2 shows how the eaves are cked at the sides of the roof. With- the frieze board nailed lengthways the underside of the projecting roof ards, a wind-tight joint could not be ected even if the roof was laid with tched lumber. The joints will open time and between each board will be eady avenue for air and wind. The method described makes a very neat cornice, takes little material and labor and forms a smooth surface for painting.

Another place usually neglected in poultry house construction occurs along the base of the house when roofing fabric is used to cover the sides. If the boarding runs up and down (which is the most economical form) the roofing must be bent under and nailed tightly up to the sill and bottom edge of the siding. Otherwise wind and snow will be driven up between each side board inside the house. To accomplish this the side boards should come to within one-half inch from the bottom of the sill and the roofing pushed in and nailed securely with a strip of $\frac{1}{8}$x1$\frac{3}{8}$ blind stop. See Fig. V for detail.

Fig. IV shows foundation for large laying house. We formerly used double wooden floors set up on oak blocks, but now prefer an 8-inch concrete wall, to which is bolted a 2x8 sill. We give the sills a coat of hot linseed oil to render them rot proof and embed them in mortar so there is a perfect union between them and the concrete foundation. This house has withstood some of the most terrific windstorms ever experienced in the Great Lakes region.

Fig. III shows the finish of an 8x8 A shaped colony house, which style we prefer to any other in this size, and believe it to be a considerable improvement over the usual method of continuing the roofing down over the sides with no breaks between roof and sides. The boarding should be made flush, the side roofing put on, and a 2x2 then nailed all around the eaves, front, back and sides. The side pieces are beveled off a little as shown in the figure, and the roofing is bent down over the strip, completely covering it. This makes a perfect joint and throws the drip off the roof away from the building, and adds greatly to the appearance of the structure.

Just a word as to the selection of roofing. Authorities on poultry house construction now agree that the single boarded wall covered with good roofing represents the utmost in the way of practicability and economy. Good roofing is cheaper than paint for the walls of a permanent building. Would advise a three-ply fabric on roof and a two-ply on sides of poultry buildings.

BUY NOW

Special summer discounts on old and young stock. Best values we have ever offered. Choice cocks, hens, cockerels and pullets bred from trapnested hens that lay more than 160 eggs a year. **Choice trios and pens** that have laying qualities bred in the bone, and that will also produce good exhibition birds. Ferris Leghorns have been trapnested for nearly 14 years, and will make the best possible foundation stock for egg production. We can furnish **pullets and hens in hundred or thousand lots** at very low prices. Whether you need only one bird or several hundred, it will pay you to get our prices and investigate the quality of our stock before you buy.

Satisfaction or Your Money Back

You can return within three days any birds that are not satisfactory and money will be refunded. All stock is **insured for 30 days**, if any die or get out of condition we replace free of charge. Your success is our greatest concern and we stand back of you with advice and assistance until you are profitably established.

Winners for Any Show

Ferris Leghorns are unequalled as exhibition birds. No matter where you want to win, we have the stock you need with fine heads, long backs, low tails, pure white plumage and close approach to perfection in every little detail. We have been winning for years at the largest shows and during the past year have won over **50 FIRST PRIZES AT 15 BIG SHOWS** in all parts of the country.

Write for free 80-page catalog giving list of winnings, testimonials, prices of all grades of stock, guarantee and complete information. Tell us your needs so that we can quote prices.

Geo. B. Ferris, Ferris Leghorn Farm
905 N. Union Ave. Grand Rapids, Mich.

These moulds taken into the body of the fowl cause a disease known as Aspergillosis. The disease is as fatal as the name sounds. Our scientists have neglected to find a shorter name for the disease, but among poultrymen chicks affected with the trouble are commonly spoken of as "lungers". Many times the disease is mistaken for white diarrhea. The Missouri College of Agriculture, in its investigation of poultry diseases, notes the following characteristic symptoms: The chick stands around in a drowsy manner and shows little desire to eat. The wings hang down, the breath is rapid and a white diarrhea is present.

An affected chick will be found to have soft, yellow growths from the size of a pin head to that of a pea, mainly in the lungs, but sometimes in the intestines and mesentery. These growths, clogging the air passages of the lungs, are directly responsible for the death of affected birds.

In mature fowls there are two forms of the disease. The mucous membrane lining the air-sacs and tubes may be covered with a membraneous formation which is soft and yellowish and has an offensive odor, or the post mortem will reveal white or yellowish nodules imbedded in the tissues of the lungs.

Early symptoms are that the bird is inactive, sleepy and if forced to run, will fall from exhaustion; breathing is rapid, appetite is diminished and more or less catarrh is present.

There is no cure for the trouble, but since it is caused by eating mouldy feed or by being permitted access to mouldy litter, it can be entirely prevented by not compelling fowls to eat mouldy food and by keeping them away from mouldy litter.

This is just one of the many poultry troubles that can be avoided by feeding nothing but fresh, clean feed and keeping the pens and yards free from filth and moulds.

Myers' Barred Plymouth Rocks

I will now sell a lot of my breeding birds at reduced prices to make room for growing young stock. These birds represent my best breeding quality stock. They are bred from my best lines and I can recommend them to every breeder desiring choice exhibition and quality birds. I sell in lots and quantity to suit, and assure absolute satisfaction. Selected Breeding Cockerels, $5, $7.50, $10, $15. Selected Breeding Pullets, $3, $4, $5 to $10. Trios, $10 up. Pens, $15 up. A Special Pen of Male and 4 Females, $25. Remember I select and mate all birds sold. Write me your wants. **Eggs for hatching.** Write for free catalogue.

Don't Kill

or sell your laying hens.

Use the POTTER SYSTEM and pick out the layers from the loafers and diseased hens. Keep only healthy laying hens. The POTTER SYSTEM is a secret and the greatest discovery of the century in the poultry world on the subject of Egg Producing Hens. Used by over 3,000 satisfied poultry keepers, who are saving dollars every year.

Our new 100-page Potter System book, "DON'T KILL THE LAYING HEN", contains the secret and knowledge about laying and non-laying hens. It's revelation to poultry keepers, and you will learn how you can use the Potter System on your flock, keep less hens, get more eggs and make more money using it. Write today, sending two red stamps to cover postage on our large catalog and circular telling about Potter Poultry Products made for Particular Poultry People. If you are particular and want to make more money on your flock, you will write us today.

T. F. POTTER & CO.

Box E-21 Downers Grove, Ill., U. S. A.

An experimental poultry farm is to be established near Pueblo, Colo., in the very near future as a result of the efforts of the Pueblo Poultry Association. Land owners have offered to donate the necessary land and the Pueblo Poultry Association will furnish the equipment. The business men of Pueblo have agreed to contribute toward a fund for the purpose. The object of the movement is to get the farmers of the Arkansas valley interested in poultry culture and furnish them practical instruction.

SUMMER CARE OF POULTRY.

DURING the hot days of summer the fowls require careful attention if they are expected to do well. Lice and mites multiply very fast at this season and so do disease germs or bacteria. When the breeding season is over the males should be separated from the females, as both will stand the hot weather better and come through the moult in better condition. During the moulting season the sharp toe-nails of the males will often tear the skin on the backs of the females if both sexes are allowed to run together. Extra good care at this season means old stock that will put on new plumage as rich colored as pullets and pullets that will fill the egg basket next winter. But a little neglect in providing clean quarters, shade, fresh drinking water or in fighting lice and mites and the chicks are stunted and the constitutional vigor of the old fowls weakened beyond which neither will entirely recover.

Too many poultrymen give their chicks good care for the first month or two and then expect them to shift for themselves with a little grain thrown to them now and then, but even on the best of free range this method will always work disastrously. Given free range the chicks will find a large number of insects, fresh green food and some weed seeds, but not in proper amount or balance to supply the needs of their fast developing bodies. When hand feeding is practiced the chicks will wait around the feeding place an hour or two when they should be searching for insects and then when the feed comes they are apt to overeat, being so hungry. The best plan is to give both grain and mash in hoppers and not feed by hand except just be-

fore the chicks go to roost in the evening. A satisfactory ration is equal parts (by weight) wheat bran, wheat middlings and beef scraps fed dry from a hopper and cracked corn fed from a separate hopper with soaked oats fed in the evening just before the chicks go to roost. This makes a very satisfactory ration without the oats, but the chicks will grow to a larger size if fed the oats.

One of the problems during dry, hot weather is to keep up the appetites of the chicks. For this purpose nothing excels buttermilk. It cleanses the digestive system of bacteria as well as providing valuable nutriments. Chicks and fowls given plenty of buttermilk to drink will seldom be subject to diarrhoea and will be larger, longer and glossier of feather and much better in every way than those that are compelled to do without it. But whatever feeding system you follow be sure to have a system and be very careful about making changes. The best way to feed chicks is to give them the same food from the shell to maturity. Of course, the grains must be finely cracked for young chicks and coarser for older chicks and it may be advisable to make slight changes in the food that is fed, such as adding a different kind of grain or omitting another, but such changes should be made very gradually. I have known people to feed corn when it was the cheapest grain and then when wheat was cheaper feed wheat, feed dry mash a few weeks and then change to wet mash or feed whole grain entirely. Such changing shocks the digestive system and stunts the chick.

The fowls' quarters should be kept clean at all seasons, but especially at this season, when mites and disease germs multiply rapidly.

Cleanliness does not merely consist of removing the droppings from the dropping boards and frequently renewing the litter, but the house must be kept germ clean. When you clean your houses clean them thoroughly, remove all litter, dust and dirt, and follow with a thorough scrubbing with Zenoleum or some other good stock dip, being sure to get it into every crack, and your house will be free from disease germs and mites. During hot weather it is important to do this often, as the mites get on the chicks from the grass and one cannot be entirely rid of them for any length of time. Lice live on the fowl's body and must be killed by dusting or dipping the fowls. A good cheap lice powder can be made by taking 2 parts gasoline to 1 part crude carbolic acid (95 per cent pure) and adding enough plaster of paris to take up all the moisture and not leave the mixture damp enough to become lumpy. To be effective any lice powder must be freely used and dusted all over the fowl's body, even if the lice are apparently only in one place. The fowls should be dusted at night and quietly put back on the roosts so the powder will remain in the feathers over night. The powder kills the lice, but not their eggs, so it is necessary to repeat the dusting in six or seven days to kill the lice that have hatched from eggs.

Fowls and chicks of all ages, but especially half-grown chicks, are apt to be bothered with intestinal worms at this season. Epsom salts given in a damp mash will cause the birds to expel the worms. This should be given at the rate of a teaspoonful for every two or three mature fowls or three or four half-grown chicks. Close the hoppers in the morning and feed the mash in the evening. If you have hens setting now be sure to pour a little warm water in the corners of the nest every few days and dust the hens frequently and thoroughly. Given these attentions, they will do well and bring off better hatches than they would earlier in the season. All breeders of exhibition birds and especially of the colored varieties find it highly profitable to hatch a goodly number of summer chicks, as they make the best colored birds, getting their mature plumage in the fall and winter when they do not have so much hot sun and dry air to fade their plumage. Chicks hatched at this season must be given a range apart from the older chicks and be kept free from lice and mites. Keep the mother hen confined to the coop till late in the afternoon each day unless she is very quiet and will keep the chicks in the shade most of the time. Fowls of all ages will suffer greatly if compelled to do without shade at this season. If you have not natural shade at their disposal, such as trees, bushes and sunflowers, you can very easily provide artificial. One way is to make a frame of poles about three feet above the ground and cover them with fresh cut, leafy brush. The city poultryman who has not these things at his dis-

Camp Point. Chas. Simmonds.

THE POULTRY SILO.

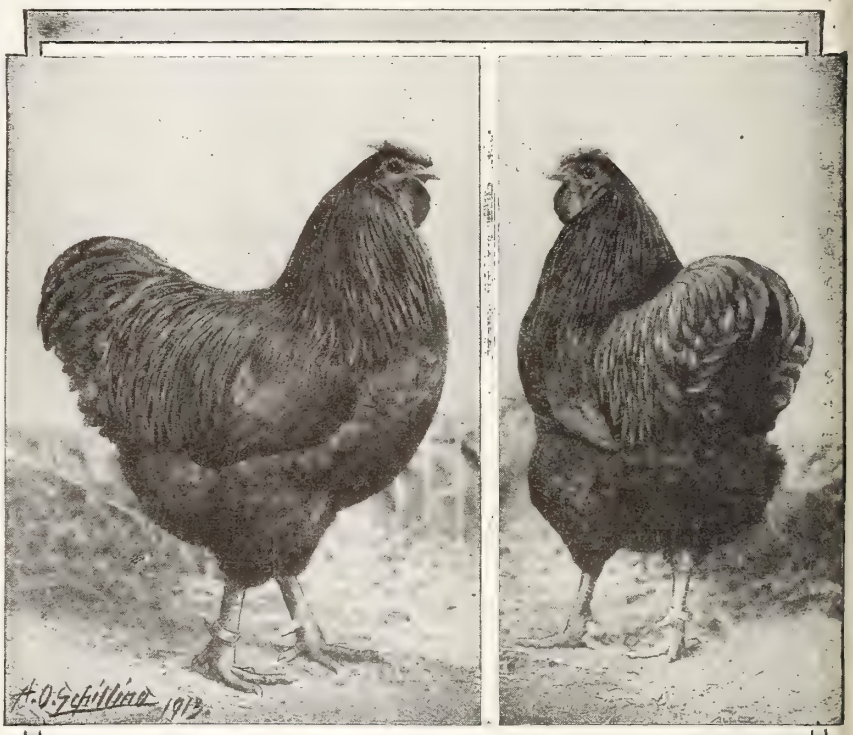
THE silo is in no sense an experiment, and is not a new thing.

Although it is the disposition of some to look upon it as having developed within the last decade, according to history it was a common practice as far back as the time of Greece and Rome to preserve grain and green feed in underground pits. Also the custom for hundreds of years to preserve green feed in the same manner in northern Europe, where the uncertainty of the weather made it difficult to cure hay.

The first silo in the United States is said to have been built in Michigan in 1875. Since then we are all acquainted with the growth, value, and widespread use of the silo. Every agricultural paper in the United States advocates this economy and great usefulness. Every farm paper praises them. Their testimonials are hundreds of thousands. For supplying the farmer and stockmen with a feed that is equal to June grass with grain combined. All this has been proven true by the best advice and experience in America.

Enough green food is one of the secrets of a generous supply of winter eggs, also of the health of the flock. This has also been tested. Hens are more fond of it than any other feed and do better. Give them good winter quarters, plenty of sunlight, fresh water, meat diet when needed, keep grit in boxes and silage twice per day, and there will be no excuse for not getting eggs in winter. It is the testimony of hundreds of farmers who have given their flocks ordinary stock silage that they received eggs all winter when their neighbors got none.

Poultry silage is prepared in the same way as stock silage with the addition of so much small grain per foot, such as wheat, oats, millet or barley, kaffir corn if preferred, all combined makes the best ration in the world, as well as scratch feed.



Silage bears a similar relation to fresh corn that canned fruit or canned sweet corn does to the fresh article. The feeding of silage in winter makes it possible to keep the animals or poultry of any kind in practically the same condition that they were on pasture or range in the summer.

We erected one silo, 12x20, at the cost of $50, estimated capacity 50 tons, actual capacity 45 tons. It is built of ordinary fir flooring of good quality that can be bought at any lumber yard and built any size to suit the needs of the user. No extra machinery is needed beyond the ordinary farm silage cutter, which can be rented or a number of poultry men club in and own one. All working together can fill a silo at very low cost per ton. One noticeable feature in our thoroughbred Rocks was their plumage and combs being in the most perfect condition all winter, far excelling those that were not fed silage.

From our experience and hundreds of others, I believe it to be the coming feed in the poultry world.

S. E. Shelbourne.

New London, Mo.

PROFILE AND REAR VIEW OF FIRST PRIZE PARTRIDGE WYANDOTTE COCK CHICAGO SHOW DEC. 1912. BRED AND OWNED BY SHEFFIELD FARMS GLENDALE OHIO

Poultrymen, as a rule, are sadly deficient in the possession of a degree of business acumen that prompts them to dispose of their product to the greatest possible advantage. After a certain stage in the life of a fowl, every day that it is fed and cared for represents nothing but loss to the owner. Yet how many of our practical poultrymen take advantage of their own knowledge in this respect? In any other business, every effort is put forth to earn the greatest possible profit, and it is just as important in the poultry business. Those principles of business can be applied with the same shrewdness and sagacity in the poultry business as in any other. Why not do it? Why not apply business principles to a poultry business?

Don't Feed Green Food!

Do away with the bother by using

Succulenta Tablets

They are better and cheaper and more relished by all fowl. Simply dissolve one tablet in one quart drinking water for fowl. Sample can (100 large tablets) by mail 50c. Can of 250 large tablets by mail $1.00. YOUR MONEY BACK IF NOT SATISFIED. Drop postal for particulars to The Succulenta Co., P. O. Box 405-1, Newark, N. J.

Fiske Strain White Leghorns Are Money Makers

TO get back to the old, old argument—good birds cost no more to keep than indifferent ones. That they yield more, eggwise and every otherwise has been proven so often, that anyone who refutes the statement needs to have their "head felt of."

If you want some spring water—the surest way to get it pure is to go right to the spring. If you want White Leghorns that are the pure blooded Fiske Strain, that has been gathering in the ribbons wherever shown—then Harlo J. Fiske is the man to buy them of.

Never have my birds been quite so fine or so full of promise. They are selling surprisingly early. What can we do for you right now?

The One Best Poultry Show.

The Great Allentown Fair, which is one of the half dozen biggest and best fairs in America, holds annually in connection with its exhibitions a poultry show that is unique in its nearness to fulfilling the claim of being the "one best poultry show."

Certainly it has many other things no other fall fair poultry show has, and practically everything the best winter shows can have or do have.

It has adopted for its slogan the words, "Noted for the Way It Does Things and the Things It Does," because it has originated and put into practice many new ideas and methods as regards poultry exhibitions; has done this fearlessly and knows no favored exhibitors; strictest impartiality and fairness for all. The smallest breeder as an exhibitor has a full, fair show with the biggest and is equally welcome. No officer, no employee, no judge can show a single bird in competition.

Big Prize Monies; Finest Selling and Advertising Possibilities. Few or no other shows pay the prize monies Allentown does and, being one of the biggest and oldest fairs in the United States, the opportunity to make sales, to advertise and gain prestige are extraordinary and unusual.

Attendance is absolutely unnecessary if not convenient or possible. Three-day show only and everything is done with business push and clock-like precision.

Begins Tuesday noon, September 22, and ends Friday noon, September 25. Entries close midnight, Friday, September 11.

W. Theo. Wittman again in charge. By special arrangement it has been made possible for Mr. Wittman to continue in charge and all letters regarding the show should be addressed to him, Mount Gretna, Pa. For premium list readers will address the Fair office, Allentown, Pa.

1914 Judges at Allentown. Following their usual custom of making a complete change of judges every two or three years, Allentown presents practically a new list of judges this year.

Allentown can afford to and does pay for the best judges, and no judges are taken on because they work cheap or for nothing. The list embraces fourteen judges, as follows: Chas. D. Cleveland, Eatontown, N. J.; Geo. H. Burgott, Lawton's Station, N. Y.; Louis Paul Graham, Collingwood, N. J.; Aug. D. Arnold, Dillsburg, Pa.; A. Fred Kummer, Butler, Pa.; T. F. McGrew, Scranton, Pa.; F. W. Corey, Mohegan, N. Y.; M. C. Richardson, Front Royal, Va.; Chas. T. Cornman, Carlisle, Pa.; Geo. L. Young, Brooklyn, N. Y.; Rudolph Sweissfurth, Philadelphia, Pa.; William Eluinzer, Philadelphia, Pa. The premium list will give the general assignment of these men as to classes and varieties, but this may be varied from considerably as occasion or need may arise.

Now is the time to read page 1059—its very interesting!!

The Greater Chicago Poultry Show.

The second annual exhibition of the Chicago Poultry Breeders' Association will be held January 14th to the 20th, inclusive, 1915, in the International Amphitheatre, Union Stock Yards, Chicago, Ill. This hall is without doubt the best lighted and ventilated, as well as the best known in the country. The floor space is large enough to stage the biggest poultry show without double tiering. The management is assured by all indications that they will hold the biggest and best show ever held by an association of its age. Up-to-date uniform cooping will be used. The judging will be by comparison, and the list of judges which will be announced shortly will comprise some of the most prominent judges in the country and a sufficient number so that the work will be done quickly and properly. Entry fees are $1.00 for singles and $3.00 for pen entries; $26.00 cash prizes will be paid in filled classes in all varieties, as well as silver cups on displays. Every premium is guaranteed. Any breeder figuring on making some good show this winter had better tary, Arthur E. Lemeux, 5630 Wilson Ave., bear the date in mind and send to the secre- Chicago, Ill., for a premium list, as this show will compare favorably with any show in the Central West, and a win there will add prestige to any exhibitor.

One of Nation's Biggest Shows.

The Kankakee Inter-State Fair, one of the most successful and most widely known Fairs in the country, will hold its meeting this year August 31 to September 4. Premiums have been increased $10,000.

In its coöperation with the Kankakee County Crop and Soil Improvement Association, the Kankakee Inter-State Fair is doing much to advance the interests of agriculture. Some months ago pamphlets were mailed out announcing the premiums on 390 different displays of farm and garden products.

Special interest was aroused by the premiums on soil maps, to be drawn by young men from the county, setting forth the drainage, roads, lanes, buildings, fences, types of soil and crop rotation of the farm on which they reside. The work of agricultural education has received a vast stimulus from the activities of the Kankakee Inter-State Fair. For premium list address Len Small, Kankakee, Ill.

The Augusta (Ga.) Poultry Association will, as has been their custom in the past, coöperate with the Georgia-Carolina Fair Association this fall by giving their annual poultry show on the same dates on which the Fair will be held, which means that the poultry show will take place October 19th-23d, inclusive—the Fair dates. The Augusta Poultry Association is one of the most stable organizations of which this city can boast, and the colossal shows that have been given in the past rank among the biggest in the country. All communications and correspondence in reference to the show will be promptly answered if addressed to Mr. H. W. Cameron, Secretary, Augusta, Ga.

The First Big One.

Through the solicitation of a great many exhibitors throughout the East, the management of the Williamsport Poultry Show have brought their 1914 dates forward one week, making them November 17, 18, 19 and 20. Williamsport has perhaps, with one exception, Madison Square Garden, gained a wider reputation than any other show in the East. At this show are annually found the sensational winners that later are crowned with the Blue at the Garden.

The policy of the Williamsport Show has always been to maintain a low entry fee, and to provide liberal cash and cup prizes. During the past six years Williamsport has been the "Mecca" for the poultrymen from almost every State in the Union and Canada, for here year after year many fancy sales are made by large and small breeders.

Mr. Geo. J. Hanks, secretary, would be pleased to correspond with all prospective exhibitors, giving them any desired information. Premium list will be mailed October 1st, and, as an entire new mailing list is now being prepared, names should be sent in at once in order to secure a copy.

Poultry Show Illinois State Fair, September 18-26, 1914.

The premium list of the great Illinois State Fair will soon be ready for distribution. Every poultry breeder and fancier should have one.

The Illinois State Board of Agriculture say the attractions this year will be greater than ever. Over $100,000 will be paid in premiums.

Mr. George Cooper, of the State Board, has again placed the department in charge of O. L. McCord, Peoria, Ill. Mr. McCord has been in charge of the department for a number of years and needs no introduction to the poultry public. Through his efforts he has made the exhibit at the State Fair one of the high-class poultry exhibits of the country.

The Poultry Department, as in the past, will be one of the leading features of the Fair. Illinois is fortunate in having one of the best poultry buildings in the United States. The department is cooped with the beautiful Empire coops; all fowls will be taken care of and handled by expert poultrymen, men who have had experience in handling large poultry shows.

Two large tents will be furnished by the State Board for the meeting place of the American Poultry Association, Specialty Clubs and School of Instructions.

Mr. Franklin J. Sewell, one of the leading poultry artists of the country, will be in attendance at the Fair.

The judging will be done in one day, by a number of the leading judges, leaving the exhibitors free the balance of the week to advertise and enjoy the Fair.

For further information regarding the Poultry Department, address O. L. McCord, 929 Jefferson Bldg., Peoria, Ill.

Missouri State Poultry Show.

The Missouri State Poultry Association will hold a Silver Jubilee Show in the Coliseum, St. Louis, Mo., Thanksgiving week, November 24th to 29th, 1914. This being the twenty-fifth anniversary of the State Association, it is planned to celebrate this anniversary by giving the largest and best show in the history of the association. It is a well-known fact that the Missouri State Show is one of the great shows of the country every year. The following judges have been secured to place the awards: Branch, Hicks, Southard, Emery, Rhodes, Thompson and Heimlich.

For further information please address Fred Crosby, Secretary, 3251 Gillham Road, Kansas City, Mo.

Of Interest to Local Associations.

The management of the Great Coliseum Exhibition have decided to offer a special that should in the right way encourage local associations to exhibit under the name of their associations. For the season of 1914 a special of $25.00 will be offered for first and $20.00 for second, to the breeders of local associations making the largest win, according to Rule 15. The entry blanks that go out this year will have at the bottom a blank line for each exhibitor to give the name of his association. This will be entered on the books of the secretary, and at the close of the show every award made on every breed or variety, Standard or non-Standard, will be credited to these associations, and the association winning the greatest number of prizes will be awarded the $25.00 and the one winning the next greatest number will be awarded the $20.00.

It would certainly be a credit to any asso-

MYRON W. MILLS, Prop. H. H. COBURN, Mgr.

ciation to be able to advertise to the world that their members won at this show more prizes than any other association. It is open to the world and costs absolutely nothing, as the same cash specials will be offered on all varieties as heretofore.

The Great Mid-West Poultry and Pet Stock Association have introduced more good and novel features in Poultry Show management than all the other Poultry Shows in the country combined. We feel that it is up to us to encourage local shows and we can think of no better plan than to offer these specials.

Cape May County Poultry Association.

The Cape May County Poultry Association was recently organized at Rio Grande, N. J., with the following officers:

President—John N. Reeve, of the Wildwood Heights Poultry Farm, city office 129 S. 5th St., Philadelphia, Pa.

Vice-President—Trueman Hickman, Green Creek, N. J.

Secretary—Walter P. Taylor, Cold Springs, N. J.

Treasurer—Mrs. Edward P. Phillips, Broadway, West Cape May, N. J.

Cape May County is the last county in the State to organize a Poultry Association, and the objects are to advance the interest of the poultry raising throughout the country, which is one of the best sections of the State for poultry, and the spring and summer markets at the seashore resorts of Anglesea, Wildwood, Wildwood Crest, Cape May City, Stone Harbor, Avalon, Sea Isle City and Ocean City are excellent, prices obtained are considerably above the prices of New York and Philadelphia markets, at that season of the year on account of the large number of people residing at the above seashore resorts together with the great influx of summer visitors.

Annual Judging Course to Be Held at Springfield.

The Hewes-Pierce School of Poultry Judges will hold their annual meeting at Springfield, Ill., in connection with the Illinois State Fair, opening September 21st. Only eight students can be accommodated and those desiring instruction should write at once to Theo. Hewes, Indianapolis, Ind., for information and terms. It is well to note that many of the headline judges of today received their first instruction in this school. A tent has been provided for the exclusive use of the students, and the work is both instructive and interesting.

The Cumberland White-Egg Runner Club.

Third annual meeting will be held September 1, 1914, at the Poultry Building, State Fair, Syracuse, N. Y. The first session will be held at 11 a. m. and another in the afternoon. The club has had a very successful year and done more to advance the cause of the true Runner Duck than all other agencies combined. A good attendance is requested and an interesting meeting promised. Any new members may join and will be welcomed. Initiation and first year's dues, $2.00.

C. S. Valentine, President,
Ridgewood, N. J.

The Greater Buffalo Poultry Show to be held Thanksgiving week, November 23-28, will be one of the prominent events to mark the opening of the poultry show season for 1914-15. The exhibition will again be held in the spacious Broadway Auditorium that was pronounced by prominent poultrymen attending last year's successful show to be one of the best adapted and largest buildings in the country in which poultry shows are held. The list of judges includes some of the best known and most able men in the country as follows: Geo. H. Burgott, Chas. D. Cleveland, J. H. Drevenstedt, W. C. Ellison, Jas. Glasgow, F. D. Mauder, Chas. McClave, Wm. McNeil, Richard Oke, A. O. Schilling, H. P. Schwab, Jas. Tucker, Geo. W. Webb. Others are being corresponded with and additions will be announced later. Information will be furnished on application to the secretary, Wm. C. Denny, Buffalo, N. Y.

The Trenton Fair Poultry Show, this year to be held September 28, 29, 30-October 1-2, will be under entirely new management, Harvey E. Rogers, president of the Mercer County (N. J.) Poultry Association, having accepted the management. Mr. Rogers has had considerable show experience, being secretary of the 1911 and 1912 Trenton Winter Shows, held by the Trenton Poultry and Pigeon Association. The Trenton Fair offers a very attractive list of cash specials in addition to the regular premiums, which are very liberal. An entire new list of judges will officiate. Messrs. Schwab, Punderford, Wolsieffer and Minich will place the awards. Prize money will be paid last day of show. Send for premium list to Harvey E. Rogers, Superintendent, 1520 East Clinton Ave., Trenton, N. J.

The Tri-State Poultry Association, of Memphis, Tenn., has increased its premium list this year by several hundred dollars and many silver cups. This show has now a more attractive premium list than any of the southern fairs and as good as the best of the winter shows. Reserve a premium list now by sending your name now to Martin F. Schultes, Secretary, "Albashire," Bartlett, Tenn.

The Silver Wyandotte Club catalogue for 1914, which contains many valuable articles and illustrations, is now ready. The same will be sent free to all those interested. Address H. J. Goette, Secretary-Treasurer, St. Paul, Minn.

The Second Annual Show of the Pope County Poultry Association will be held at Golconda, Ill., November 16, 17 and 18, 1914, with D. E. Hale as judge. The first show was held last December, with J. A. Leland as judge and was gotten up in just ten days' time and no attempt was made to get outsiders to show. The result was over two hundred birds and some twenty-five varieties of poultry shown. One firm in Golconda paid out over $125,000 for poultry last year. More improvement has been made this year in the grade of poultry than in many years past. This show will be a good place to show and make sales as people are taking hold of pure-bred poultry. Write to Theo. S. McCoy, Secretary, Golconda, Ill., for a copy of the premium list.

The Illinois State Poultry Association will hold its annual show January 4-9, 1914. The judges will be A. F. Kummer, C. H. Rhodes, George A. Heyl and J. C. Johnston. Exhibitors cannot afford to pass up the Illinois State Poultry Show. It is a progressive show and always has something new to offer its exhibitors. Send in your name at once so you will be sure to receive the annual catalog. Address Theo. S. McCoy, secretary, Golconda, Ill.

The Invaluable Guide to Poultry Profits.

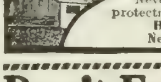
A catalogue masterpiece is the one to be issued this season by the Hall Mammoth Incubator Company, of 132 Southern Ave., Little Falls, N. Y., of which we have just received advance proofs.

It has required months of preparation and represents the work and experience of more than a lifetime.

The Hall Mammoth Incubator is the pioneer in its field and is known as the original and standard. The slogan "There Is Safety in Hall Equipments" was just as forceful nearly 40 years ago as it is today. The principles which were such a pronounced success way back in 1876 are still incorporated, though of course the Hall has kept ahead in the matter of additions to these, which refinements increase the ease of operation and assure certainty of control.

Incubators, as a rule, are sold on the bald claim that they will hatch eggs, which claims are backed by more or less abundant testimonials. The Hall catalogue goes a step farther. It gives the scientific reasons why it hatches stronger chicks or ducks and why it hatches more of them. It will be noticed that the testimonials, or rather records of results, in the Hall catalogue are from sources well known for their unquestioned reliability, and their strength and value is due to their giving facts and figures and not mere statements of general satisfaction. The big and successful poultrymen of this country and also in many foreign lands use Hall Equipments.

This catalogue is a text book on incubation, easy to read and understand, yet written largely from the viewpoint of the scientist who wants reasons to support every claim and the hard-headed, practical poultrymen who consider every detail from the dollars and cents standpoint.



One of the most interesting features of this book is the illustrations and explanations of the Hall Positive Temperature Control. The temperature in each egg compartment is regulated by utilizing the never-changing law of nature in a manner that is the extreme of simplicity. The heating medium—hot water—regulates its own temperature by the infallible law of expansion and contraction of its own body. It must expand, it must contract, therefore by the Hall System it cannot fail in the performance of its important duty. This all-powerful control, together with the successful solving of problems of moisture and ventilation, have made the Hall the incubator the poultryman can rely upon for maximum profits and minimum expenses.

We understand that this catalogue will be sent to those who ask for it and state what size incubator they are interested in. The smallest Hall is 1,200 eggs capacity, and the maximum is 20,100 eggs, though many Hall customers have equipments ranging from 30,000 to 50,000 eggs and one has 100,000-egg capacity and is still increasing. It is not at all unusual for a small group of Hall customers to have a total incubator capacity of over a quarter of a million eggs.

Aldrich S. C. Quality White Orpingtons.

Now is the time to order your show birds for the early fairs and shows and we know of no better place to secure them than from Aldrich Poultry Farm, 5077 N. High St., Columbus, Ohio. This firm have over 500 more young birds than they raised last year and they are showing excellent quality. A large number of them will be ready for the early fall fairs to step into the hottest competition and win for you. A great number of these youngsters were bred from first prize cocks and cockerels at the Chicago and Madison Square Garden shows last December and promise to make as good birds as the birds from which they were bred. Aldrich Poultry Farm have enlarged their plant considerably this summer and with the extra stock they will have they expect to be able to supply the great demand which is sure to come on account of the scarcity of early hatched chickens all over the country. They report inquiries coming in rapidly and they have already booked several thousand dollars' worth of birds for the coming season's shows. We would advise our readers in need of birds to win at the early shows to place their orders as soon as possible so as to get the best of selection. All birds sent out by this firm are conditioned and sent ready fit for the show in the best form possible. A large number of cocks and hens will be through the moult in

Effective and doesn't harm chicks. 10 and 25 cents. Money back if these preparations do not satisfy.
The G. E. Conkey Co., Cleveland, Ohio
Ask For Conkey's Free Poultry Book

ample time for the early shows and you can secure your pick by ordering now. Indications point to a greater demand than these people can fill and we would therefore advise early selection. During the past week they have booked orders for several birds at $100 each and over, including one hen at $250, thus showing that the interest in White Orpingtons is as great as ever, and people desire to purchase the best birds that money can obtain. One order was received by Aldrich Poultry Farm for several hundred dollars' worth of birds to go to Mexico City as soon as the railroads are in condition to carry them safely through. If you need show stock don't delay, but place your order today. It means the best that money can buy. Please mention American Poultry Journal when writing.

Buff Orpingtons of Quality.

Old Forge Poultry Farm, Spring Grove, Pa., has had more than usual success in hatching out Buff Orpingtons this season and the youngsters in all stages of development surely are a grand sight to see. Mr. P. H. Glatfelter, proprietor of this farm, is a wide-awake and broad-minded fancier and is wonderfully enthusiastic over the buffs. He stands ready at all times to do his best in the interest of his favorites. The plant is beautifully situated and forms a part of an estate, the glory and admiration of everyone who can appreciate beauty in architecture. A pen of S. C. Buff Orpingtons belonging to Old Forge Poultry Farm is entered in the Third North American Egg-Laying Contest at Thorndale, Pa., and have been the leaders of the division from the start. They have won the prize for leading their class for the first half year. One of the individuals holds a place among the high-scoring birds. Mr. Glatfelter has refused several high offers for this pen. They certainly are making a great record and we believe that they will keep up the good work. This farm breeds for eggs as well as for the show room. All of the birds that this concern has entered in the contest have a good chance to reach the 200 mark. If you are in need of anything in the line of Buff Orpingtons do not fail to communicate with Old Forge Poultry Farm, Spring Grove, Pa. They guarantee to please or refund your money.

Royal Reds.

Royal Red Rhode Island Reds are reported to be better this year than ever before. F. E. Harrison, originator and breeder of the Royal Red strain of Single Comb Rhode Island Reds, is very enthusiastic over his prospects for quality Reds this year.

Mr. Harrison has three thousand promising birds at this time, July 15, in all ages, from one week up to birds weighing four pounds, and they give every promise of being the best flock he has produced in his twelve years of experience.

These birds are given the exclusive run of eighty acres of farm land, on which over one hundred colony houses are scattered to take care of them.

He has just executed a new sales list, in which he is offering birds at greatly reduced prices to take care of these three thousand, for when you stop to consider it is absolutely necessary to give exhibition specimens plenty of room, and it therefore takes an enormous amount of buildings to properly accommodate a large flock like this.

For the next two months Mr. Harrison is cutting prices of his breeders in two, and is offering several hundred cocks and hens at prices that will pay prospective buyers to investigate.

Mr. Harrison writes that in his opinion nobody in America is in better position to furnish winners for the early fall fairs or shows than he.

Write for his free catalogue to F. E. Harrison, Box 30, Menominee, Michigan.

The Sandy Lick Orpington Sale.

The Sandy Lick Poultry Farm, consisting of a fifteen thousand dollar plant, have decided to change the plans of running this farm from the fancy to the mercantile end in view, having taken in several farms to help produce the birds and eggs, which will be known in 1915 as The Sandy Lick Co-operative Poultry Farm.

They have decided to sell their Buff and Black Orpingtons at $10.00, $13.00 and $15.00 per pen of four females and one male, all of their special mating. White, Silver and Golden Laced Wyandottes, prices the same. Leghorns, D. W. Young Strain, they have one and two year old cocks and lots of early cockerels for early shows, prices ranging from $2.00 to $5.00 each.

They have spent hundreds of dollars buying imported birds and have traveled over a dozen States and Canada to get the best they could for their yards. This is your opportunity to buy winners for a small sum, add new blood to your stock and start anew. They will sell birds single or in large numbers. Kindly make inquiry, as stock must go. Read over their winnings and be convinced of the quality of their birds, as this is not an annual clearance sale to rid the farm of undesirables. Address L. O. Kettering, 966 Liberty Ave., Pittsburgh, Pa.

Show Birds of Quality.

Owen Farms, 107 William St., Vineyard Haven, Mass., is now in phenomenal shape to furnish birds in top show form for every week of the entire show season, beginning with the earliest fall fair. Their Buff Orpingtons, White Orpingtons, White Plymouth Rocks, White Wyandottes and S. C. Rhode Island Reds are ready to win any fall fair in America. Any of our readers needing a cock, hen, cockerel, pullet, old or young pen to complete their strings will do well to write Owen Farms just what show you wish to win and they will be pleased to quote you prices on birds by return mail. Owen Farms' customers have won thousands of First Prizes all over the United States and Canada. This is the result of this firm's readiness in furnishing show birds of quality when they were needed. Mr. Maurice F. Delano, the proprietor of this farm, writes us that he also has some strong, husky utility birds of this year's hatch which they are offering at exceedingly low prices in order to reduce their flocks before they go into winter quarters. Look up their advertisement on another page of this issue and see the excellent bargains that can be had right now. Satisfied customers is Owen Farms' motto. Write them, mentioning A. P. J.

Make Your Show Attractive.

The poultry show season is rapidly advancing and the prospects are for more and better shows this season than ever before. The officers of the various associations are already busy with plans for making their show more attractive this year than last, and a little better than the other fellow's.

Now what makes a show attractive is its equipment, and the first thing the visitor notices on entering is the cooping—poor cooping will make a good show bad.

Another thing, birds do not show their good points in a poorly constructed coop, and should have the advantage of attractive housing.

Elsewhere in this issue you will find an advertisement showing a cut of Moe's New Collapsible Steel Wire Exhibition Coops, which were especially designed for training and exhibition purposes. They are not only ornamental but sanitary and serviceable as well. They are made of heavy galvanized steel wire, electrically welded and will not rust from dampness or exposure to the weather. There are no clips or projecting bolts to break the feathers of the fowl, and each coop contains two attachments for feeding and drinking cups.

Poultry association officials would do well to write Otis & Moe Manufacturing Co., Otis Bldg., Chicago, for full information regarding these new coops which can be supplied at small cost and will do more to add to the attractive features of your show than anything else.

Regal Strain White Wyandottes.

John S. Martin, of Port Dover, Ont., Canada, advises us that he has over one thousand January and February cockerels and pullets coming along in fine shape for the early shows. Quality is unusually good and they seem to run very even this season. Last season Mr. Martin furnished winners for over twenty State Fairs and all his customers were more than satisfied. If you are in need of some good show birds here is the place to order them. He also has two thousand later hatched chicks, which means three thousand young birds for his trade. Owing to the fact that Mr. Martin could not grow enough chicks on his old plant to supply the demand during the last two years he has purchased an adjoining farm which now allows him to increase the capacity of his plant. He is doubling the size of his brooder house and erecting some more long houses, which when completed will give him a modern and up-to-date plant in every way. This will allow Mr. Martin to raise enough chicks to supply all of our readers with winning show birds. Write to him if in need of some excellent birds. He guarantees to satisfy or refund your money.

Spraying.

Proper spraying proves profitable in two ways: First, it prevents the ruination of the crops by destructive insects or fungus and growths, or both; second, it actually adds to both the quality and the quantity of the crops.

Perhaps the thing most essential to successful spraying is that the spraying be done at the proper time—not too early or too late. Many agriculturists find the "Spraying Calendars" issued by several well-known concerns exceedingly helpful in this regard. One of the most comprehensive calendars of this nature, we are informed, is that one published by the E. C. Brown Co., of Rochester, N. Y., who have made the subject of sprayers and spraying their sole study for over 15 years. We understand that this company will send complimentary copies of this calendar to all readers who apply for same.

Pape's S. C. Black Minorcas.

We desire to call our readers' attention to the advertisement of Chas. Pape, Fort Wayne, Ind., in this issue. He is offering some very choice early 1914 hatched cockerels and pullets for sale for show purposes. These birds were hatched during the months of January and February and are quite well matured at this time and certainly will be in excellent show shape any time during the months of August and September. A number of yearling hens in laying condition can also be had at reasonable prices. Mr. Pape's S. C. Black Minorcas are great winter layers. They can't be beat as a table fowl, their meat is juicy and well flavored. Our readers in need of some of this breed of poultry will do well to write Mr. Pape for his catalog and special price list.

Notwithstanding the fact that a great many poultrymen found the Spring of 1914 a poor hatching season, Sheffield Farm, Glendale, Ohio, reports unusual success and are offering five hundred February and March hatched pullets and cockerels, all of them prospective winners of the blue. The annual winnings of the "Premier" Partridge Wyandottes are a notable event of the show season, and while Mr. Hark modestly refrains from making any predictions, he hopes to repeat his victories of recent years.

Broken Cones and Crackers

Just the Feed Your Poultry Needs

The great secret of poultry feeding is "variety." It is the nature of fowls to search over a wide range for various foods, and where this is possible, poultrymen obtain the best results. In Broken Ice Cream Cones and crackers, poultrymen will find "just the thing" to make variety and add a pleasing taste to the fowls' food.

CLASSIFIED ADS

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and **five cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention **A. P. J. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.**

DR. PRINCE T. WOODS' NEW BOOK

How to Raise Chicks

INCLUDING REVISION OF "FACTS ABOUT WHITE DIARRHOEA"

A down-to-date manual on breeding poultry, getting hatchable eggs, incubation and brooding both natural and artificial, preparing chick foods, feeding chicks, how to raise chicks and how to avoid and prevent disease and losses. Told in plain language. Illustrated with reproductions from photographs and pen drawings. Tells how to make your own brooders and chick foods. Written by a man who knows how and how to teach others. 88 pages, 35 illustrations and 5½x8 inches in size. Printed on good paper. Well and durably bound in cloth.

A Book for Everybody Who Keeps Fowls or Grow Chickens Whether Beginner or Old Timer in the Field of Poultry Work

It has ten chapters: Chapter I—Selecting and Mating Breeding Stock. Chapter II—Food, Vegetable, Animal and Mineral. Chapter III—Fowls and Food. Chapter IV—Care and Management of Breeders. Chapter V—Eggs for Hatching. Chapter VI—Incubation, Natural and Artifical. Chapter VII—Brooding with Hens and with Brooders. Chapter VIII—Chick Foods and Feeding Chicks. Chapter IX—Growing Chicks. Chapter X—Facts About White Diarrhoea. What white diarrhoea is. Symptoms of disease. Causes. Is there more than one form? Has germ of specific disease been found? Infection. Prevention. Treatment. Formula for a simple remedy which has proved effective in many cases in many climates for four years.

Here is a book devoted to chick comfort and to more and better chicks, 75 cents per copy postpaid. Learn to save your chicks; that means more profit; Dr. Woods tells how; send for the book now, only 75 cents, cloth bound.

With Am. Poultry Journal, one year, $1.40. Canadian Subscription and Book, $1.65; Foreign, $1.90

E·B·Thompson's "Imperial Ringlet" Barred Plymouth Rocks

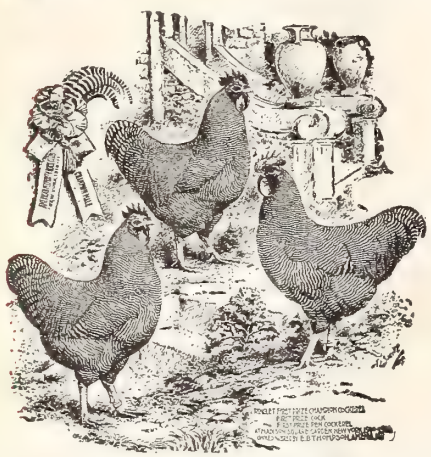
Eclipse all former achievements and win the most brilliant record of their time at Madison Square Garden, New York, this Winter of 1914, winning as follows:

ALL RIBBONS ON COCKERELS, namely, first, second, third, fourth and fifth prizes.

First and fourth on Cocks.

First, second and fourth on Exhibition Pens.

The Imperial prize of the show, Sweepstakes Special for Champion Male.



Medallion for Champion Cockerel.

Diploma presented by the American Poultry Association for Best Cockerel.

Spec'l for Best Shaped Male.

Spec'l for Best Colored Male.

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York.

Silver Cup for Best Plymouth Rock hatched in 1913, male or female, any variety.

Specials presented by the President of the American Barred Rock Club for Best Cockerel and Best Pullet.

Three Best Cockerels; Best Display; Best Collection.

Silver Cup presented by the New York Sun for best Cock, Hen, Cockerel, Pullet and Pen.

Sweepstakes Silver Cup for Best Exhibition Pen.

The Association $25 in Gold for Best Display.

All Silver Cups and Cash Specials.

Three times as many first Prizes as any Barred Rock Exhibitor.

More First, Regular and Special Prizes than any Exhibitor of any breed.

My exhibit was the most illustrious ever presented to the world —every winning feather was bred on my farm.

The amazing record of **1st, 2nd, 3rd, 4th and 5th prizes** on Cockerels—every Regular and Special Prize offered—stands unmatched in the history of Madison Square Garden. It is unequalled. These cockerels and hundreds of their brothers on my farm are beyond comparison—they are the Finest in the World.

If you want to win and breed winners you must have my Imperial "Ringlets."

They are the standard by which all other Barred Rocks are judged. The great twin records at Madison Sq. Garden, N. Y., 1913 and 1914—two years in succession—spell **Imperial "Ringlet" Supremacy.**

F. E. HARRISON'S
Aristocratic Royal Red
S. C. R. I. Reds

1st Old Chicago Pen 1913-14, Bred and Owned by F. E. Harrison, Menominee, Mich

were never better, when you stop to consider that in the show season of 1913-14 they were exhibited at four national shows under four different judges, and won twenty-two out of a possible twenty-three firsts, every championship, every color and shape special in the entire four shows. You can then judge the quality I must have to be "better than ever."

NOTE THIS: These twenty-two firsts were won in competition with one hundred thirty-six exhibitors, and not in county shows, but national exhibitions, they being the Chicago Coliseum show (not the local show), Indianapolis, Illinois State Fair and the State Fair of Upper Michigan. This is a record that has never been equalled, and we this year have birds of even better quality in both shape and color than ever before.

I have the largest farm in America devoted exclusively to the breeding of Single Comb Rhode Island Reds. The three thousand head of specimens that I have this year cannot be equalled by any half-dozen Red breeders in the world.

I am prepared to furnish winners for any fairs or shows, birds that will have reached their maturity by the time these exhibitions are held, and the quality I have cannot be duplicated by any breeder.

REMEMBER: For twelve years past ROYAL REDS have won more prizes than all competitors put together.

ROYAL REDS have established themselves in all parts of the civilized world, and as they stand today they are champions over all other strains.

COCKS, COCKERELS, HENS and PULLETS, PENS and TRIOS, or in any quantity to suit the purchaser.

A large number of UTILITY SPECIMENS that are egg machines of the highest type.

Catalogue free for the asking.

BEST by CONTINUOUS TEST

Is The Unbeatable Record of

Tecktonius-Reed Strains

R. C. S. C. Buff Leghorns S. C. Rhode Island Reds

An occasional winning fowl, or pen, is not unusual; many breeders produce them, but that don't make a WINNING STRAIN, any more than a "swallow makes a summer". Producing a strain of birds that **sweep the boards** in the big Nat'l Laying Contests and Exhibition Arenas—not ONCE, but YEAR AFTER YEAR—is the unbeatable achievement of **Tecktonius-Reed** "Buffs" and "Reds", in competition with all popular breeds—against America's foremost breeders. This unequalled breeding and exhibition record proves "Tecktonius-Reed's" **breeding methods** to be scientific, and and their strains of "Buffs" and "Reds" to be a dependable foundation upon which poultrymen can rear a brilliant poultry success. Hundreds are doing it today; why not you?

Note Our Attractive 1914 Offerings

Choice of three Varieties (R. C. and S. C. Buffs—S. C. Reds) with Each

Utility Stock	Exhibition Breeding Stock	Exhibition Show Stock	Special Pullet Offer
Good breeding Cockerels $3 and $5 per head. Good breeding Trios, or Pens, $10 and $15.	Hens or Pullets—$5, $8, $10, $15, $25 per head. Cockerels—$10, $15, $25, $50 per head.	Pens—high quality—$50, $75, $100.	Eleven April Hatch Pullets—excellent value—mated to a good, vigorous Cockerel $15.00

NEVER BEFORE HAS OUR OFFERING been of such high quality—never before was your chance for making a "a ten strike" in poultry raising as good as now. In National Laying Contests—1912—our Buff Leghorns led with high average of 249½ per pen—201 for individual hen.

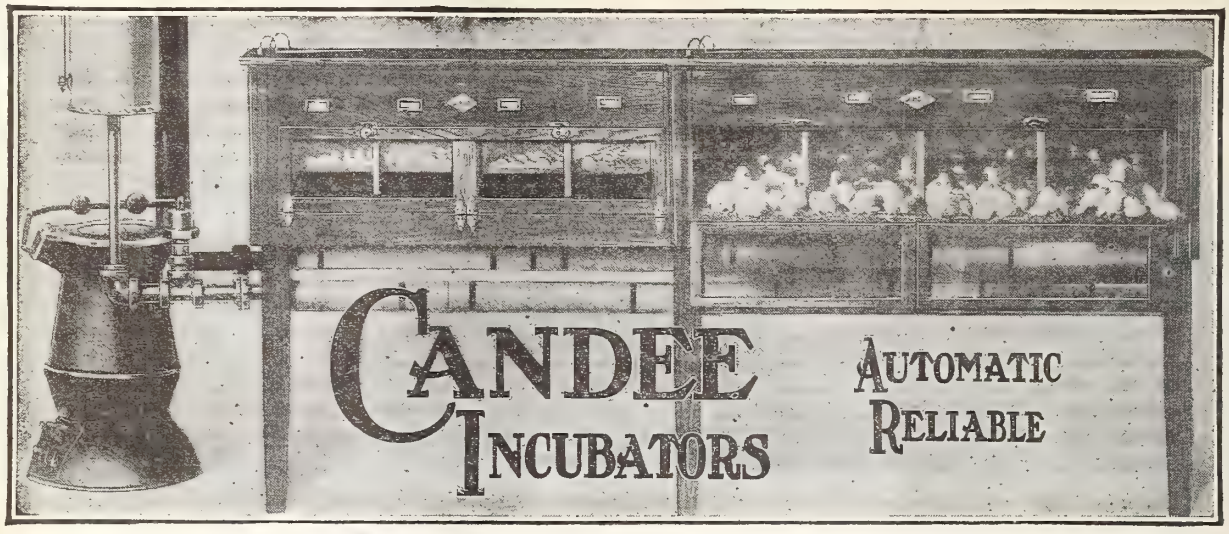
"Tecktonius" Strain of "Buffs" carried of first exhibition honors for 8 years at Chicago, New York, Boston, Philadelphia, Baltimore, St. Louis, San Francisco, Kansas City, Indianapolis, Cincinnati, New Orleans, Memphis, Des Moines, and scores of lesser shows. Your success as a breeder as an exhibitor—will be assured with a **Strain** backed by such an array of continuous triumphs. Send us your order today.

Tecktonius & Reed Buff and Red Farm
ROUTE 7 **RACINE, WISCONSIN**

"A fine flock"—

Rudy's Perfection Strain

White Wyandottes



will delight the most fastidious lover of fine poultry. "A fine flock" is the involuntary comment. They have that pure white color, broad back, perfect head points and well spread tail so much desired in the beautiful White Wyandotte.

I will supply you with birds that cannot fail to please—the kind that will not be overlooked by any judge—birds that you will be proud to possess and that will win the ribbons for you if entered in competition.

Remember, my birds have the reputation of winning the most coveted prizes at the larger fairs and poultry shows.

Send for illustrated catalog and moderate prices.
Satisfaction guaranteed or money refunded.

GEO. H. RUDY, **Route 15,** **MATTOON, ILLINOIS**

Every Setting Handled As A Separate Hatch

The Candee heating system is unlike any other mammoth. Take the 1200-egg size illustrated above. You don't set 1200 eggs all at one time.

Whenever you have any number up to 300 eggs you start a compartment. It has its own automatic heat control, allowing only the amount of heat needed to enter the compartment radiator.

The main heat supply is not in the egg chambers and it does not flow from one into the other. Each compartment gets the heat from the covered heating pipes underneath, and when it is used it goes directly back to the heater to be reheated.

Set 300 Eggs At A Time

This 1200 has four compartments, and to run it at full capacity, you only need 300 eggs every four or five days. Every compartment having its own heating system, a hatch coming off in one has no effect on the remainder of the machine.

The 1200 is the popular size—used from coast to coast by hundreds. It is Shipped-All-Built, set up in a few hours by any handy man and it is unexcelled as a hatcher.

Sell Chicks from Surplus Eggs

Attention twice a day is all it requires. Use it for your own work and turn any surplus eggs into big sturdy baby chicks that bring top prices.

Prepare now for next spring, which is bound to be a banner poultry year. This season many more chicks were ordered than could be supplied. Next year the demand will be even greater.

Quickly Pays for Itself

A small investment will secure you a Candee and it will repay its purchase price and give you a handsome dividend the first year.

Remember, selling baby chicks and doing custom hatching for your neighbors is a cash business and one that has proved among the most profitable in poultry.

With Candee equipment your hatches will be right and your business started right. Then another year you can add extra sections and do more.

Correct Heat for Breeding Separate Hatches

A Candee Hot Water Brooding System handles many separate broods in one house and at one time. Each gets just the amount of heat needed, according to the age of the chicks.

One heater with healthy hot water heat furnishes the supply and the adjustable hovers can be set for any temperature.

This method, originated by us, is used by thousands, and it is the safe, dependable way.

Heaters in 12 Sizes

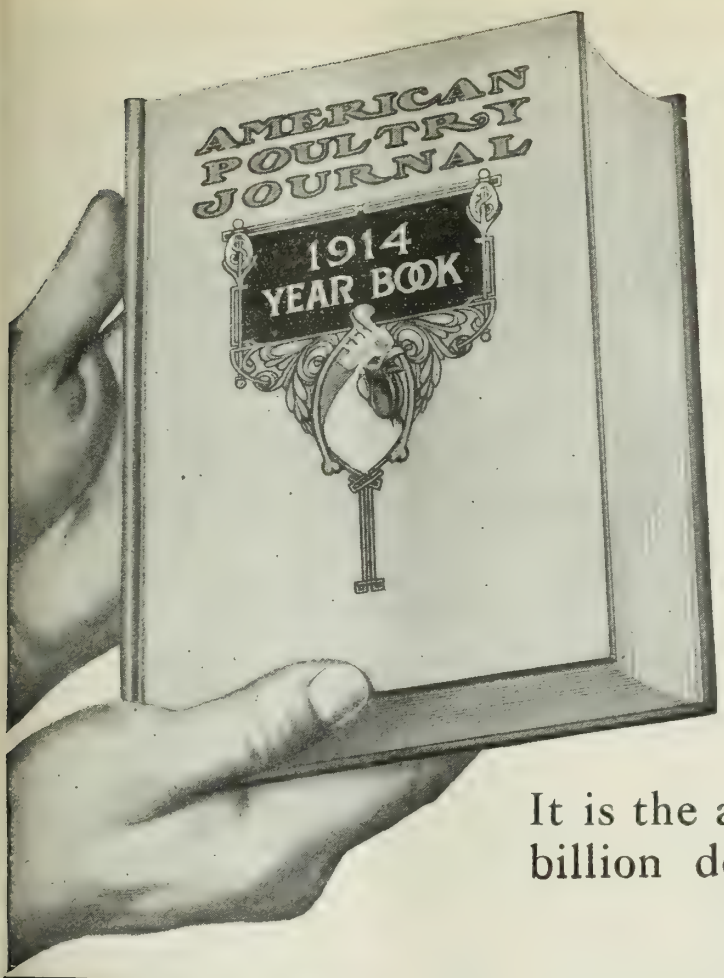
Twelve sizes of heaters allow us to furnish a heater neither too large nor too small.

The cost is reasonably small and in the end it is the cheapest because you will raise more chicks to maturity than in any other way.

The system saves your work—the hovers are at a convenient height, and are rat proof. The felt is guaranteed for five years and the chicks can not pick it to pieces.

Pure Air for the Chicks

Such a house is quickly cleaned, has pure air and the chicks will grow as you never saw chicks grow before.



"I never saw chicks do so well," said one delighted customer.

Now is the time to get your brooding house arranged. We have single and double house plans, and furnish these complete, free of charge.

Write for our free 108-page Incubator and Brooder catalogue. It gives full details, shows pictures of hundreds of plants and their equipment and you can see and learn of the successes of others.

Candee Incubator & Brooder Co., Dept. 2, Eastwood, N. Y.

You Need This Book

It is the authentic review of the billion dollar poultry industry

The 1914 American Poultry Year Book

It is the one poultry book which is read from cover to cover and then recommended to your friends. Intensely interesting, because it deals with the problems of everyday poultry life in a straight-from the shoulder manner. Helpful because it tells what to do and how to do it. Thoroughly practical because the subjects are written by men and women who have been "through the mill" and know what they are talking about.

Greatest of All Poultry Books

Contains 408 pages, 8 colored illustrations of pure bred fowls, and the best articles on poultry ever written. No time or expense was spared in making the 1914 Year Book the greatest poultry book ever published. The Year Book is a guide to success in the poultry business. You can't afford to be without it. Order your copy today.

Prices

Handsome Cloth Binding, $1.00; Attractive Paper Binding, 50c; or 1 year's subscription to American Poultry Journal and a paper bound Year Book for $1.25; 3 years' subscription to American Poultry Journal and a cloth bound Year Book for $2.50. Your money back if you are not satisfied.

There are Chickens—and Near Chickens

The poultryman knows this to be a fact

So there are Autos—and Near Autos

We know only too well that this is also a fact

The **Near Auto** just as the **Near Chicken,** has some of the outward appearances of the genuine article, but there are many points that are lacking that make for Standard of Perfection.

The Near Chicken is at best a poor investment, and **the Near Auto** is even a **worse one.** Near Autos are to be shunned just as Near Chickens.

CROW ELK-HART MOTOR CARS

are not Near Autos, but they are far in the lead from the standpoint of Mechanical Construction, Appearance, Efficiency, Comfort and Serviceability. They are "Made to Make Good" for the owner, and they do it. Hence, Crow Elk-Hart popularity and thousands of satisfied owners.

Buy a Crow Elk-Hart! **Ride in it every day!**

Put it to the severest tests and you'll agree it's the Greatest Automobile value being offered the public.

Building Material Prices S-M-A-S-H-E-D

NOW IS THE TIME TO BUILD OR IMPROVE

The Chicago House Wrecking Company now owned by the Harris Brothers Company decided that their best interests required more prominent use of the owners name. This Company has been favorably known to the public everywhere as "The Great Price Wreckers." The price smashing ability of this Company has earned for us an enviable reputation and justly earned title. "The world's greatest bargain center." During 22 years of successful business the four Harris Brothers have been the executive officers and owners. There is no change in our business except that the four Harris Brothers will advertise and sell their goods under our new name.

Harris Home No. 23

Never before in our entire history have we been so splendidly equipped to supply wonderful bargains. There isn't another firm on earth that occupies the unique position in the merchandise world that we do. The original methods which we pursue in securing our tremendous stocks of dependable material and merchandise and our enormous buying power represented by our $10,000,000 capital makes it possible for us to buy for spot cash entire stocks that are beyond the reach of ordinary buyers. We are determined to make the Fall of 1914 a memorable one with this Company especially in our departments of building material. These rare bargains speak for themselves.

Bathroom Supplies $13.00

White enameled cast iron one-piece roll rim bath tubs with nickel-plated trimmings and including fuller double bath cocks for hot and cold water. Connected waste and overflow nickel plated supply pipes. 5 foot long. Lot EA-61.

HEATING PLANTS

Save one-half on modern heating plants. Eliminate the expense in installation of high priced mechanics, we tell you how. Warm air plants $67, steam plants $134, hot water plants $154.

Oak Heaters $2.45

But one of the stove snaps in our bargain book. Best made kitchen ranges, base burners, hot blast and oak heaters in all styles and sizes. Lot EA-62.

$1098 BUYS MATERIAL TO BUILD THIS Model Farm Home

Without question the most convenient and practical design offered today. It represents the combined result of 22 years of expert planning, designing and close study of economy in material and construction. For years we have solicited suggestions from hundreds of our customers and country people everywhere. The best we have received is embodied in this design. Let us take you through it.

Basement under entire house; boiler room in rear. Boiler and coal room section and front section may be partitioned off tightly. Dust tight coal bin and root room. Outside cellar stair; large door easy to get in and out. First floor has 4 large rooms. The reception room and living rooms are separated by cased opening; giving an extra large social gathering room if desired. This also applies to the living room and dining rooms. Main stairway has a lead to kitchen permitting passage to second floor without going through living room. Kitchen is large and well arranged. Pantry will hold a wonderful lot of supplies. A large handy washroom is provided just back of kitchen. There is also a back porch between the pantry and washroom properly protected. On the second floor are 4 good-sized bedrooms each with its own closet. A linen closet is provided for and an airing porch which may be used for out-door sleeping purposes. Bathroom is conveniently located for economical plumbing.

THE MATERIAL The above price includes all first-class No. 1 dimension lumber. Clear interior trim. Beautiful glazed front door, Clear flooring. Clear Cedar shingles and siding; up-to-date hardware. **Ready-cut** door and window frames, inside door jambs, out door and window casings, balance in lengths to work without cutting or waste wherever possible, all glass in and back puttied.

10,000 Persons Would Not Now Be Homeless If All Salem Buildings Had Been Roofed With

J-M ASBESTOS ROOFING
"The Roll of Honor"

Profit by the lesson of the great Salem, Mass., fire. Don't put wooden shingles on your buildings!

If you do, you will have to trust to luck that fire will not come your way.

And you will find them extremely expensive, too, because they have to be constantly repaired.

If you value safety and *real* economy, use J-M Asbestos Roofing.

It resists fire—never requires painting or repairing—and is absolutely and permanently water-tight.

Get roofing service out of a single investment that pays dividends in fire protection and freedom from bother and expense for years to come!

GET J-M ASBESTOS ROOFING!

J-M TRANSITE ASBESTOS SHINGLES also provide *absolute* fire protection and add to artistic appearance by their attractive colors and rough edges.

J-M Regal Roofing is recognized as the most serviceable brand of wool-felt roofing.

The Evening World.

SHINGLES TO BLAME

MASSACHUSETTS is still bending a thoughtful brow over the ruins of Salem.

Everybody agrees that the one thing which contributed most to the spread of the fire was—shingles. House after house burst into flame the instant the rain of sparks touched the tinder-like shingle roofs.

• • •

—a dry, weathered shingle makes about the finest kindling known. In a closely populated town a brisk wind carries flames over shingle roofs as fire sweeps over sunburnt prairie grass.

The Bay State is using the Salem fire to start a strong argument against shingles. It will do the rest of the country no harm to listen.

GERMOZONE

By Geo. H. Lee

IT is just eighteen years this Fall since I named "Germozone". Formerly it existed, but nameless. It lived, then, as a prescription in the practice of an old time doctor, famous for his seldom failing treatment of diseases of the skin, and of the mucous membrane of the body cavities. For any and all strictly surface irritations or inflammations, from catarrh to leucorrhea, from eczema to itch, he used the same remedy with uniform success.

Germozone was born of an idea that came to me after a strenuous battle with Roup, Canker, Chicken Pox, and Bowel Complaint in my poultry yards. I had tried 'most everything when all at once the thought came that what would prove successful for catarrh or other mucous discharge in a human being would surely do the same for roup in a chicken; that what would remove eczema or chicken pox on a man, woman or child would do as well for a hen.

It worked, and it worked so well that, today, when anyone says "Germozone," you think of chickens. It worked so well that it is today the standard poultry medicine of the world—the widest distribution and the largest sale. Germozone is sold on an absolute guarantee of satisfaction.

For Poultry and Pigeons, Germozone is used in cases of Roup, Swelled head, Canker, Sore throat, Chicken pox, Sore head, Loss of feathers, Bowel complaint, etc. Thousands give Germozone regularly twice a week as a preventive and bowel regulator.

For Dogs, Singing Birds, and other pet stock, Germozone is a whole medicine chest. Many birds do not sing because of sore throat. This condition Germozone quickly relieves.

For Stock, use for Cuts, Wounds, Sores, Burns, Canker, Skin Diseases, Loss of hair, Sore mouth, Harness Galls, Swellings, etc.

"Germozone beats them all for an all-around medicine. Three years ago I was losing 20 chickens a day, and I began to using it and did not lose any more. Last year I raised 300 chickens and never lost one and this year 250 chickens and never lost one. I never let them have any water without Germozone in it till they are eight weeks old. I would not raise chickens without it." Robt. McHeffey, Vinton, Iowa.

"I have found your Germozone to be all and more than you claim it to be. My pet bantams were dying with roup two years ago and I cured all of them. Would not be without it for anything. I have a fine English Bull Terrier, which was very sick with cold. Gave her Germozone and cured her too." Mrs. H. L. Bennett, Kansas City, Missouri.

"Germozone is worth its weight in gold to the poultryman. I have also used Germozone for other things and it has never failed me. It cured a fine Pollar canary singer valued at $10. He had been wheezy and roupy and did not sing for two years. I tried every kind of Bird tonic without success. Now he is singing splendidly and in perfect health." Mrs. W. W. Woods, Springfield, Ohio.

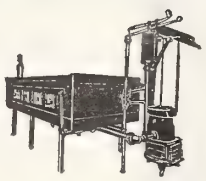
FAIRFIELD POULTRY FARM. H. W. SCHNITZER, Prop. FAIRTON, N. J.

That's the Stuff for Lice

It's all over with the lice when you sprinkle your hens with Dr. Hess Instant Louse Killer. It sure does kill 'em—and it's safe also. Sprinkle your layers with it often, dust it around the roosts, cracks and dust bath.



Dr. HESS INSTANT Louse Killer

kills lice on farm stock; also bugs on cucumber, squash and melon vines; cabbage worms, slugs on rose bushes, etc. Comes in sifting top cans. 1 lb. 25c; 3 lbs. 60c (except in Canada and the far West). Write us if your dealer hasn't it.

Sold under Dr. Hess famous guarantee to do as he claims here or your money refunded.

Dr. Hess & Clark
Ashland

Capacities, 1,200 to 20,100 Eggs
(Sectional Construction)

HALL users make money. They are far more successful than the average in the poultry business.

Re-orders indicate satisfaction. The HALL leads in new sales as well as in selling old customers over and over again. There is security in HALL EQUIPMENTS.

The reason. Bigger hatches of bigger, better chicks or ducks, that grow into money quickest, with least trouble and expense. Extra chicks of extra vigor pay for the HALL. ***It is the original and standard.***

Smaller users write as enthusiastically as this best known poultry plant:

PITTSFIELD POULTRY FARMS COMPANY
PITTSFIELD, MAINE HOLLISTON, MASS.

We can speak only words of satisfaction of the efficiency of HALL EQUIPMENT. The 100,000 capacity that we have gives us excellent service. We would not think of installing any other machine that is now on the market. You will probably receive an order from us for 65,000 additional capacity before Fall. Pittsfield Poultry Farms Company,

July 7th, 1914 F. W. Briggs, *Treasurer.*

What size can you use? Write us in detail and ask for information. Would you like our SERVICE SPECIALIST to call and help you to get the right equipment and results?

American Poultry Association at Chicago

Thirty-ninth Annual Meeting a Notable Occasion—Over Five Hundred Members Present

By Prince T. Woods, M. D.

CHICAGO—a big city of warm-hearted, wide-awake people—a big convention with live interest—and a great big good time. That is the way the thirty-ninth annual meeting of the American Poultry Association, Hotel Sherman, Chicago, August 10 to 15, 1914, sizes up in brief from our personal viewpoint.

The Chicago Poultry Society "did themselves proud" in the matter of entertainment. Visitors were given a hearty welcome and were royally entertained. The events were free to all attending the convention and there were no extras to pay for. Visitor's money wasn't legal tender when attending Chicago entertainment—you couldn't do any spending and if one expressed a desire to see something not on the program some Illinois "live wire" was right on deck to deliver the goods. Did we have a good time? You bet we did! We had to miss some of the regular entertainment program on account of the necessity for attending the business meetings, but outside of the busy convention hours the Chicago boys and other friends among visiting members could scarcely spare us time for sleep.

We believe that everybody had a good time, all whom we saw were DElighted, and most folks when the time came for going home were about "all in," tired but happy. If anyone failed to enjoy Chicago, it was his own fault. There were free tickets to the ball game, the theatre and the amusement parks; a big reception for everybody with a fine vaudeville entertainment in the convention hall at Hotel Sherman which consumed an entire evening; on the next evening there was a smoker for the men and a banquet for the women, with a special entertainment program at both; there were automobile trips about the city; an interesting trip to the stock yards, during which one lady visitor told us she had two lunches and a good big dinner; then there was a fine boat ride on the steamer "Theodore Roosevelt" on the lake, affording a panoramic view of the city of Chicago at night; more auto rides to points of interest. That does not sum up all of the entertainment, it would take a whole issue of A. P. J. to go into details.

There was held in central Y. M. C. A. two free public poultry institutes; one on Tuesday, from 11 a. m. to 1 p. m., at which Prof. Wm. A. Lippincott, professor of poultry husbandry, Kansas State Agricultural College, and W. Theo. Wittman, State Poultryman for Pennsylvania, both made interesting addresses. On Thursday, Mr. Harry M. Lamon, Junior Poultry Husbandman United States Department of Animal Industry, made an interesting address, illustrated with 1,500 feet of moving picture films. Prof. T. Patterson, pathologist, Missouri Experiment Station, and Prof. James G. Halpin, professor of poultry husbandry, Wisconsin State Agricultural College, both delivered interesting lectures on practical poultry culture.

Monday, August 10th, was registration day and nearly 500 members registered, coming from far and near from all sections of the North, South, East and West. Each member was tagged with a substantial bronze badge, with name card and reproduction of the Association emblem. Then there were souvenir watch chains with an enamel portrait of "Red Comb" on the button; attractive leather card cases and very useful chain key rings. "Convention Cackles," an interesting sixteen-page magazine, was published daily during the convention and distributed among the members, its lively pages providing much to amuse and interest everybody.

In spite of a heavy shower on Monday the auto parade "to meet President Thompson" proved highly entertaining and everybody enjoyed the fun, including those who received a good ducking in the heavy thunder shower. This procession was headed by a special escort of White Leghorn cocks of giant proportions (men in wonderfully life-like poultry costumes) and attracted much attention from the crowds in the city streets. The moving picture man caught the parade and we understand that the films will "do the movie circuit" throughout the States. Except for the heat and rain on opening day, even the weather man was exceedingly kind in Chicago; we had fine cool summer days all the balance of the week.

The thirty-ninth annual meeting was called to order by President E. B. Thompson, of Amenia, N. Y., promptly at 9:30 on Tuesday morning. He at once proceeded to introduce an unusual and decidedly human-interest order of business by reading a telegram announcing the arrival of "the youngest and newest member of the American Poultry Association," the birth of a son to Secretary and Mrs. S. T. Campbell. We venture the opinion that no son of a royal house ever received a more hearty and enthusiastic welcome to this planet and it was several minutes before the convention again came to order. Secretary Campbell, wearing a smile worth while, responded to this ovation with a few fitting remarks.

Frank E. Hering then introduced the Hon. Everett Jennings, chief counsel of the Illinois Public Utilities Commission, who had been deputized by Governor Dunne to welcome the association on behalf of the State of Illinois. He was followed by James J. St. Lawrence, assistant corporation counsel of the city of Chicago, who welcomed the association on behalf of Mayor Harrison. The addresses of welcome were responded to by President E. B. Thompson.

Vice-President Arthur A. Peters, of Denver, Col., then was given the chair and the roll of members was called by states. There were representatives present from all sections of the United States and Canada and those states sending several delegates were loudly applauded. Vice-President

Peters presided over the convention throughout the entire session and was highly complimented on his able handling of situations, his fairness and justice to all who desired to be heard, and his unfailing good nature. During the closing hours of the convention he was highly complimented by President Thompson, received a vote of thanks and praise from the Association through a resolution introduced by Mr. Baerman, commending his most creditable performance of the difficult duties of a presiding officer, and at the opening of the closing session Mr. Peters was presented with a gold-mounted gavel by Frank E. Hering, on behalf of the association, in appreciation of Mr. Peters' services. Mr.

FIRST MALE, BUFFALO, N. Y., 1912.

The above gives you a type of F. S. Smith's Single Comb Buff Leghorns of Hamilton, Ohio, who is the largest breeder of Buffs in the world. Smith has them by the thousands and they certainly are the great egg machines.

Hering's remarks were decidedly to the point, as they usually are, and were heartily endorsed by every member present. It was a complete surprise for Vice-President Peters, and it was a few minutes before he could respond, then, like the clean-hearted, wholesome gentleman he is, he thanked the association and expressed his pleasure in being able to serve the association and said that we should always find him ready to give his time and best services to the work and interests of the American Poultry Association. We believe that every member who attended Chicago convention this year, and Atlantic City in 1913, feels a warm appreciation of the services of Mr. Peters as a presiding officer, and at one time during the Chicago meeting it looked as if Mr. Baerman would then and there insist that Mr. Peters be the next president. With such a wealth of warm appreciation the Gentleman from Colorado must find much pleasure in feeling that his work for the association has been good work well done. President Thompson, in his remarks on this subject, expressed his high personal regard for his vice-president and said that because he personally held the best interests of the association so closely to heart, he felt he could best help the association by continuing Mr. Peters in the chair. Nevertheless the president was a pretty busy man during the convention, as well as before and after the open meeting.

Routine business of the convention was handled in the usual order, reports of officers and committees were received and spread on the records and the members will get these in detail in the official proceedings as usual. It is of interest to note that the treasurer's report showed approximately $13,000 in the treasury of the association. Branch reports were admitted to the records without reading. After handling these routine matters the convention, on motion of Mr. Hering, went into a committee of the whole to consider the report of the committee on new constitution.

The committee of the whole consumed the greater part of two days, at day and evening sessions, considering the proposed new constitution and laws section by section. It was during these sessions that the association orators displayed their greatest talents in redundantly verbose "hot air" arguments. At one time it looked as if we also had a "Triple Entente" on this side of the "herrin' pond" composed of Messrs. Hering, Hicks and Curtis. The great joke of the whole effusion of eloquence, including much "hot air" that appeared entirely apart from the subject, was that little or none of this oratory will appear in the official records in an advertising way or otherwise, since it occurred in the work of the committee of the whole, and also there was little or no need of any lengthy discussion anyway as the meeting was practically solid for the constitution and laws as submitted to the association. In fact it was difficult to see wherein the gentlemen indulging in discussion really had any material for disagreement or to learn from their remarks that they really did disagree. However, it served to provide a safety valve for pent up oratory and helped to tire out the members and further the speedy disposal of most of the business later on.

There was some discussion relative to the per diem allowance of executive officers while on service. The proposed constitution provided, in addition to railroad and Pullman expenses "for $5 per day for other expenses while on service." In the early discussion Mr. Curtis held that the $5 per day should not be paid during the time that was spent in travel to and from the convention and he considered that the A. P. A. official should feel amply rewarded for his time, etc., by the privilege of riding in a Pullman car at the association's expense and enjoying the beautiful scenery viewed from the car window. Messrs. Hering and Collier made it quite apparent that the member so traveling at the association's expense was not receiving any compensation for his time and that the high cost of living during present day railroad travel made it absolutely necessary for a man to have some allowance for meals and other expenses while

First Pen Cockerel Chicago Coliseum Show December, 1913. Bred and Owned by Robt. Parmenter, Knoxville, Ill.

en route, although Mr. Hering stated that he personally had taken care of such expenses on his own account out of his own pocket. When this discussion was resumed at the next session Mr. Curtis joined the majority by offering as a substitute proposition that the member whose expenses were paid be allowed "actual expenses up to $5 per day" while en route. This course was approved, although in effect it does not materially differ from the first proposition under discussion.

Later on there was considerable discussion in regard to the division of the life membership fee when a new member was secured by a branch or by an organizer, or by a branch and

an organizer working together. This was finally adjusted by allowing $5 to the parent body, $3 to the organizer and $2 to the branch, which will hereafter be recognized as a state or provincial member instead of a branch. Aside from a few minor and non-essential changes the new constitution and laws was adopted by the association practically as presented to the convention and distributed in printed form to members.

Varieties Admitted to the Standard

The Standard Revision Committee reported that the wording of the entire 1915 Standard had been made to conform with the changes adopted by the last annual meeting and that they had carefully considered all other proposed changes. From their report one gathers that the new Standard will differ very materially from the old one. The Standard Publishing Committee remained in Chicago for some time after the convention to complete their work. The following varieties were admitted to the Standard:

Rose Comb Anconas, White Houdans, Silver Campines, Golden Campines, S. C. Blue Andalusians, R. C. White Minorcas, Salmon Faverolles, Mille Fleur Booted Bantams, Gray Japanese Bantams, Buff Ducks, Pencilled Runner Ducks.

Parade escorting President Thompson from the Illinois Central Station to the Hotel Sherman. Six White Leghorn roosters, each eight feet in height, marched at the side of his automobile. Moving pictures were taken and will be shown all over the country.

Rose Comb White, Black and Buff Orpingtons were refused admission to the Standard on motion of Mr. Delano after considerable discussion, although they had been reported favorably by the revision committee.

Campines were given a new class to be known as the Continental Class, this appearing to be the easiest solution of the differences of opinion on the part of members who favored placing this breed in the English Class, a Dutch Class and a Belgian Class.

Dr. Clark, aided by a lengthy letter from Mrs. Judy (long time a breeder of poultry and several times a grandmother) put up a strenuous fight for the admission of Old English Games to the Standard. Messrs. Platt and Sewell were in favor of admitting this old time variety. The revision committee was against them because the Game advocates had failed to submit a standard color. Several members were opposed to the games because a number of color varieties might be bred from the same pen and on the ground that these games are fighting birds. The discussion was quite warm and lengthy but the convention voted that the Old English Games be not admitted.

Several other breeds and varieties were denied admission because requirements as submitted were incomplete.

"Symmetry" again afforded members of the association opportunity for abundant discussion, on petition of Frank E. Hering to reinstate "Symmetry" in the Standard scale of points, official score card, glossary of technical terms and to adjust the scale of points to conform. A general and somewhat informal argument followed the motion to reinstate symmetry, out of which members obtained considerable entertainment and some enlightenment as to where certain members may have learned much about symmetry. It was good natured discussion for the most part and such personalities as were indulged in were voted to be expunged from the records. Symmetry was finally duly reinstated, as we believe it should be.

The attempt to reduce the weight of Plymouth Rocks was lost, as it was ruled out of order, the matter having been reconsidered and voted down at the Atlantic City meeting.

The following Standard weights were voted for Leghorns: Cocks, 5½ pounds; hens, 4 pounds; cockerels, 4½ pounds; pullets, 3½ pounds.

It was voted on petition of committee that in all Partridge varieties the description of Fluff shall be read black, tinged with red. The majority of breeders apparently favored this change, although there was considerable difference of opinion and some were strongly against it.

In the description of neck of Light Brahma males the word "silvery" will be eliminated wherever it occurs in connection with the word "white."

The new Standard will call for good length of back in Anconas, with slight slope from shoulders to saddle, then rising into a concave sweep to tail.

Weights for Andalusians will be: Cock, 6 pounds; hen, 5 pounds; cockerel, 5 pounds; pullet, 4 pounds.

In the preparation of this report we have not the space to go into details and we have not attempted to chronicle events in the precise order of day and hour of their happening. In many cases the program was changed to meet the needs of the moment and a good deal of business was carried over from one session to another from necessity. From Tuesday morning until late Friday night the convention was a busy one and at one time it looked as if it might take more than a week to finish up the business on hand. However, as the meeting progressed, and members began to tire, the business was pushed through more rapidly.

The consideration of illustrations for the new Standard occupied considerable time. The artists were asked to make quite a few more changes, most of which, to us, appeared more technical than essential, and we doubt if, when the changes are made, those who requested them will be satisfied with the results. It seems to us rather a difficult matter to have an assembly "edit" idealized pictures off hand and

do it wisely and well. We liked the Wyandotte pictures as they were presented, and doubt if they will be benefited by the changes asked for. The Plymouth Rock illustrations appeared to us rather too high in tail and too short in back, but it was quite apparent that the majority were not disposed favorably toward lowering the tail. Rhode Island Red illustrations will show a decidedly long, flat, straight back, and evidently that is what the breeders present wanted. The Ancona pictures made a hit with the breeders and the artist was highly complimented on his work.

A long list of show rules was adopted without material

A trio of Columbian Wyandottes as bred by J. E. Perkins, 513 Canton St., West Stoughton, Mass.

change from the printed copy supplied members. As these will appear in the records and later on in various show catalogs, it seems unnecessary to present them here. It will be recalled that "Rule 17" adopted, and reconsidered sustaining the adoption, at Atlantic City last year will soon go into effect. Having been reconsidered at the 1913 meeting it could not be again reconsidered at Chicago and members are wondering if any attempt will be made to enforce this rule.

Report of Executive Board

Twenty-nine members of the Executive Board were present at the roll call. The committee reported that during the fiscal year ending July 30, 1914, 846 life members were admitted to the association and 99 members since the close of the fiscal year.

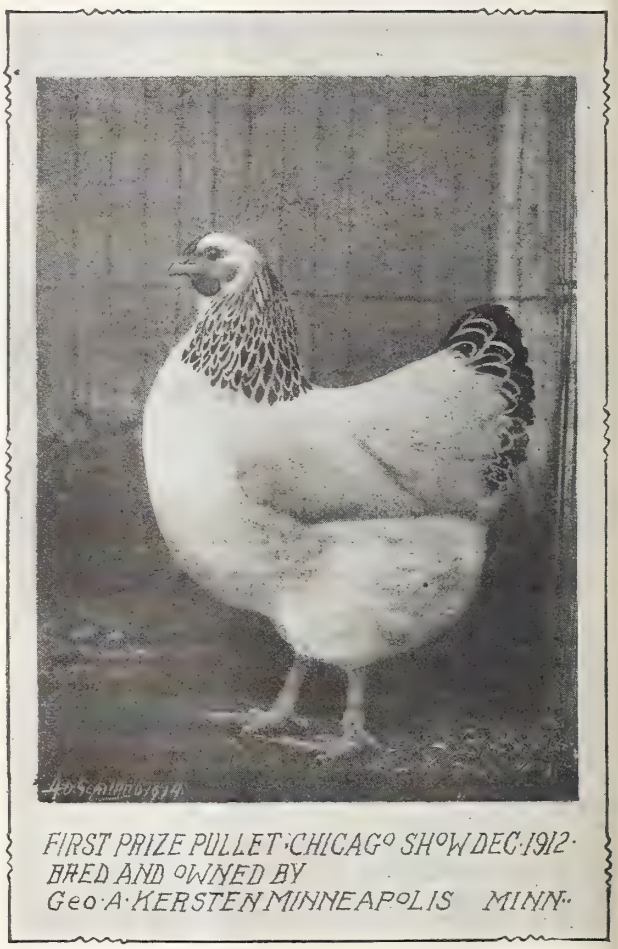
The board reported licenses granted as follows:

General Licenses to Judge Poultry

Frank W. Breed, College Place, Wash.
Jas. A. Daily, Mohawk, Mich.
Chas. A. Bloss, Owosso, Mich.
A. H. Emch, Toledo, O.
E. H. Huffman, LaCrosse, Wis.
A. H. Kochensparger, Junction City, O.
Oscar Nelson, Cour D'Alene, Idaho.
Russell F. Palmer, Lincoln, Neb.
Louis A. Stahmer, Forest Park, Ill.
B. O. Swain, Zionsville, Ind.
Tom H. Woods, Fayette, Mo.

Specialty Licenses to Judge Poultry

S. O. Lindgren, Kingsburg, Cal.
H. C. Miller, Akron, O.
Chas. G. Pape, Fort Wayne, Ind.
L. G. Gary, Trimble, O.
Geo. B. Young, Columbus, Ga.
Jas. W. Simmons, Geneva, O.



A charter was granted for a branch association in the state of New Mexico.

Sixty-six complaints and grievances were acted upon by the board. We believe that the proper place for the report of this action is in the official records and not in the poultry press.

The board recommended that the copies of the old Standard on hand when the new Standard issued be given to the various boys' and girls' poultry clubs and schools throughout the country without charge except postage. This matter was brought before the association and thoroughly threshed out. There were a good many members who could not see the advisability of introducing an obsolete and out of date Standard into the schools and clubs. It was finally voted not to permit such distribution of dead Standards. If any old Standards remain on hand after the new edition is ready for mailing the secretary is instructed to retain such copies of the old Standard as are needed for reference purposes by the association and to permanently deface the balance and sell same for waste paper.

The 1914 Budget

The finance committee was instructed to submit a budget covering estimated necessary expenses of the ensuing year. Attention was called to the fact that although the treasurer reported about $13,000 in the treasury it might be well to know and understand just how far that amount would go toward covering expenses to be incurred. When the budget was presented it developed that the association contemplates the expenditure of approximately $30,000. However, the members did not seem to feel alarmed when facing an expenditure of nearly $17,000 more than is available at the present time and appeared confident that the receipts during the coming year will prove sufficient to meet the financial needs of the association by the time the money is actually required for use. The budget was received and the amounts called for therein, or such parts of said amounts as may be actually required, were appropriated and placed at the dis-

posal of the various officers and committees. A summary of the budget follows:

Budget for the Year 1914-15

Expenses of the President's Office:		
Traveling expenses	$ 200	
Postage, telegrams, etc	25	
Clerical work	25	
Traveling expenses to convention	200	$ 450
Expenses of the Vice-President:		
Attending A. P. A. convention		225

Expenses of the Secretary's Office:		
Salary	2,000	
Traveling expenses	300	
Clerical hire	1,000	
Rent	300	
Stationery	400	
Postage and express	750	
Telegrams and telephone	25	
Insurance	75	
Bonds	125	
Petty and contingent fund	150	
Attending A. P. A. convention	150	5,275
Expenses of Treasurer:		
Traveling and indicental office expenses		100
Expenses of Election Commissioner:		
Salary	200	
Postage	250	
Attending A. P. A. convention	140	590
Expenses of Executive Board:		
Railroad and Pullman fare	900	
Per diem en route	400	
Per diem for attendance	300	1,600
Committee on Grievances and Appeals:		
Salary of chairman	300	
Postage	25	325
Standard Revision Committee (5 men):		
Visiting two shows	250	
Per diem en route and attendance	350	
Incidentals	50	650
Finance Committee:		
No expense.		
Judiciary Committee:		
Attending A. P. A. convention		300
Printing and Mailing Proceedings 1914 Convention:		
Publishing	1,000	
Postage	550	1,550
Printing and Mailing Quarterly Bulletins		500
Plymouth Rock Breed Standard:		
Printing, illustrating and binding 5,000 copies		2,000
Printing, Illustrating and Binding 5,000 copies Market Standard:		
From now on	1,750	
Expenses of this convention	600	
Final revision and editing	700	
Previously incurred (unpaid)	250	3,300
Estimated Expenses for 1915 Convention		500
Expenses for Publishing 1914 Standard:		
Railroad and per diem members committee	500	
Editing and proof reading	250	
Making and preparing plates	500	
Printing 25,000 copies	8,000	
Mailing 25,000 copies	1,000	
Express and drayage	150	10,400
Expenses Editing and Publishing Committee and Artists' Expenses	750	
Artist work	2,000	2,750
Committee on Text Book for Schools:		
Necessary expenses		200
Grand Total Estimated Expenses for 1914-15		$30,615

Market Poultry and Egg Standard

Robert H. Essex made a long, detailed report for the committee on preparation and publishing of a Market Poultry and Egg Standard. From this report it appears that this Standard is expected to fill a long-felt want and is much desired by colleges and stations conducting poultry courses. The report was favorably received and the committee given power to proceed promptly with the work of publication. It is also proposed to at once publish score cards for live and dressed poultry and for eggs, with instructions on back of same, to conform with standard. Prof. Graham, of Canada, was of the opinion that there would be a big demand for such score cards and the market standard and said that his department was now ready to place a considerable order just as soon as a satisfactory price could be quoted and prompt delivery promised.

Apparently all opposition to the market poultry and egg standard has disappeared, committee members apparently expected some opposition and were pleasantly disappointed. It is believed that the market standard and score cards based on same will prove an important source of revenue for the association and we were informed that had the association rejected the book publishers stood ready to purchase it outright and publish same at once.

A Poultry Text Book for Schools

One of the most important acts of the convention was the adoption of the report of the Text Book Committee and the appointment of a new committee consisting of James W. Bell, Frank E. Hering and E. E. Richards to act with the approval of the Finance Committee, in securing the immediate publication of a poultry text book for schools, through some regular text book publishing house, on a royalty basis.

The committee's report recommended the plan for a text book presented to the committee by C. T. Patterson of Missouri State Poultry Experiment Station. Mr. Patterson has had considerable experience as a school teacher and educator, as well as with the preparation and acceptance of

No. 1. Cheapest and best type of open-air colony house for growing chicks. The open spaces at gables, together with open front, give perfect ventilation. Any size box can easily be converted into this house, though large sizes will prove most practical. On farm described they are in use from six feet square down to soap box size, which are used for broody hens. The bottoms are wire netting, and by frequent moving the house becomes self-cleaning.

(See article "A Few Suggestions for the Beginner.")

modern text books. For the past three years he has, while in the employ of the Missouri Station, been engaged in the preparation of the manuscript of a modern text book on poultry, suited to the needs of our schools, considering both pupils and teachers. It was the intention of the Missouri Station to publish this text book for use in its home state, but it was finally decided to offer the book to the American Poultry Association that it might be official and contain certain illustrations from the new Standard.

The committee reported favorably on Mr. Patterson's proposal and recommended that his offer and that of the Missouri Station to furnish the manuscript, practically without cost and without other compensation than the honor of having prepared the first official text book, be accepted, and that the committee be instructed to at once proceed with the work of securing the publication of this book on a royalty basis through some regular text book publishing house. The copyright of the book is to remain the property of the association and this plan of publishing will secure the book practically without cost to the association, while the royalties should prove an important source of revenue for the A. P. A.

The members took to this text book proposition with the enthusiasm of ducks taking to water, and many expressed

the opinion that this text book action is one of the most important and valuable actions for the furtherance of Standard-bred poultry interests ever attempted by the association. A summary of Mr. Patterson's remarks on the text book follows:

Poultry Text Book for Elementary Schools

There is a growing demand for more and better work in the subject of Practical Agriculture in the elementary schools.

The A. P. A. proposes to keep in the front ranks among all the different phases of agriculture by giving to the schools of America a text on the subject of agriculture which will fit in with any text on agriculture either as basic text or supplemental to the other text.

The text is prepared for the seventh and eighth grades so it reaches many pupils who never go higher than the grades.

Twenty lessons was considered the proper amount of time to give to the subject of poultry.

Some of the subjects are as follows:

Importance of Poultry.
Origin and History.
Breeds and Varieties.
Housing.
House Equipment.
Yarding and Fencing.
Feeding and Watering.
Mating.
Incubation.
Brooding.
Enemies.
Diseases.
Prevention and Cure of Diseases.
Care and Management.
Examinations, Reviews, Etc.

The book is based on pedagogical principles, using inductive and deductive methods, oral and written work, and home and school study.

It is considered that poultry is one of the best subjects to connect the school and the home, and everyone interested in elementary education will greet the news of this publication with a smiling face as it is something tangible and teachable, and from the highest authority in America on this subject.

Control of Poultry Diseases

In presenting the report of the Committee on Control of Poultry Diseases, Dr. Woods representing the committee, expressed the opinion that there is no particular need at this time for any legislation in regard to poultry diseases and no call for scare talk about diseases since conditions are much better at the present time than they have been for a number of years. Attention was called to the fact that, while large shows may take unusual precautions against distribution of poultry diseases, the small shows and the country fairs often prove dangerous sources of disease distribution, particularly where hucksters exhibit big strings of many varieties that have been carried about from show to show. The text of the committee's report follows:

Mr. President and Members of the American Poultry Association: Your committee on the "Control of the Distribution of Poultry Diseases" begs to submit the following opinions and recommendations:

1. That the surest and speediest means of controlling disease distribution is by education rather than by legislation.

2. That because of the difficulties and possible complications involved, the American Poultry Association delay recommending legislation on this matter, at least for the present.

3. That since poultry shows and the manner of cooping the same are probably the greatest source of disease distribution, the American Poultry Association courteously recommend to the management of poultry shows and to persons and firms furnishing coops, more thorough cleansing and disinfecting of coops and all parts and utensils used in cooping a show, prior to use at any show, thus lessening in the future the danger of great losses such as have been incurred in the past by birds contracting diseases from infected coops or utensils.

4. That the American Poultry Association may well consider the distribution of information through the medium of brief bulletins setting forth recommendations for proper preparation, cooping and shipping of fowls. Although the expert may need no instructions along these lines, the novice is sadly in need of them.

5. That although the Departments of Agriculture of the United States and Canada, the State Experiment Stations and poultry writers are doing a great deal in the way of distributing knowledge in regard to methods of housing, breeding, feeding, selecting and general hygiene for poultry, there still exists a great need for more and better information of all poultrymen; and that it is possible and desirable for the American Poultry Association to assist in the distribution of such knowledge through brief instructive press bulletins.

6. Your committee feels that the showroom is probably the greatest source of distribution of poultry diseases. Therefore, it recommends that the American Poultry Association instruct its secretary to consult with the management of several poultry shows and formulate recommendations intended to restrict distribution of diseases through show medium and send such to all poultry show managements. Those recommendations which deal with the fitting and shipping of poultry to the show can be incorporated in the show catalog.

7. Your committee urges that the American Poultry Association instruct its secretary to have prepared and widely distributed certain free bulletins containing collaborated information regarding those diseases which are distributed through the medium of mature stock, day-old chicks, and eggs for hatching, including in these bulletins practical treatises on the quarantine of breeding stock and chicks and the treatment of eggs for hatching.

Respectfully submitted,

C. A. Rogers, Chairman;
Prince T. Woods, M.D.,
Charles T. Cornman.

Licensing Judges

Wherever it came up for discussion during the meeting the subject of licensing judges provoked much hot debate. Charles D. Cleveland in an eloquent and able speech condemned the present manner of granting licenses as a farce. He was in favor of revoking all licenses and requiring an examination, including actual judging and both oral and written tests of the applicant's knowledge of the subject. Some recently licensed judges were violently opposed to this proposition. Mr. Cleveland stated that he was sure that licenses had been granted to persons not competent to judge poultry and he was decidedly against the granting of general licenses to judge all varieties, believing that no one man is qualified to do such judging. Mr. Cleveland was voted down and the matter of licensing judges and the rules concerning the awarding of A. P. A. prizes by licensed judges stand practically as published in the new constitution.

A petition was circulated about the convention requesting that general judge's licenses be granted to Charles D. Cleveland, W. B. Atherton, W. C. Pierce, C. A. Ballou, A. C. Smith and Will F. Fry, who had not applied for said licenses.

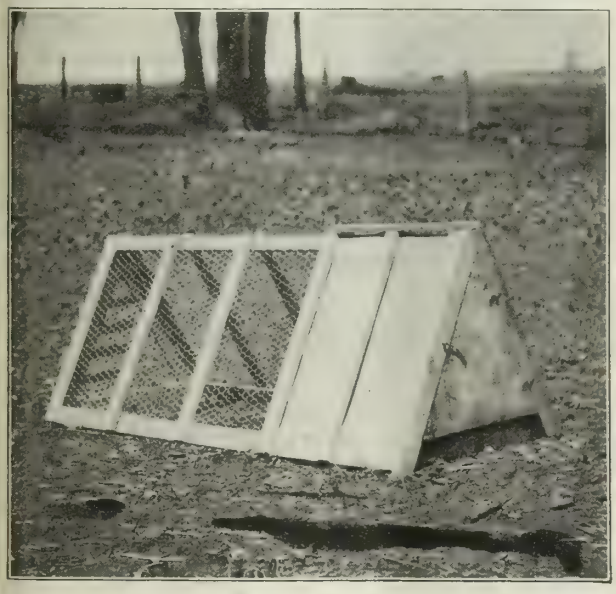
This petition was presented to the meeting and was adopted. Mr. Cleveland protested that he did not desire to be granted a general license at this time or in such manner and that when he was ready and felt qualified to apply for a general license he would prefer to make his application in the regular way and to take whatever examination may be required at such time as his application is made. His protest was not heeded.

During the closing hours on Friday evening the convention did business, without protest or question, without a quorum, the majority of the members being tired out and either preparing to go or on the way home.

It certainly was a convention long to be remembered, an improvement over the last convention, interesting and enjoyable as that was, and a favorable augury for conventions to come. So be it!

A Few Suggestions for the Beginner

The Quality of the Breeding Stock is the Keynote to Success—Strong Virile Breeders Necessary



By Maurice H. Decker, LaPorte, Ind.

FREQUENTLY PROSPECTIVE poultry raisers have strange ideas of the best method of making a beginning with poultry. There seems to be a general idea among those who have not had a try at it, that the poultry business is one in which anyone can make good from the start. To the outsider, it looks like such a simple undertaking.

Last summer one of my friends, a retired business man, with a suburban place of five acres, expressed his desire to embark in the poultry business, and intimated his willingness to listen to advice, after first freely expressing his ideas on the subject.

He proposed building a long laying house, buying 2,000 White Leghorn chicks in the early spring, and raising at least 800 pullets from these chicks, to winter. There was, of course, a big possibility that a novice could not carry out such a program. Many have done as well, however—so well, in fact, that they are tempted to plunge deeper the succeeding year, in which case a severe shakedown of some nature is usually in order. There is probably nothing the matter with this method of getting together a nice flock of layers, aside from the large initial investment necessary, provided he could raise the chicks, and raise them right. The weak spot in such a program would undoubtedly be in the extremely probable lack of a good healthy, virile lot of breeders to replace and maintain the flocks in the future. It is my belief that a market poultryman cannot afford to pay the price of chicks of the necessary quality to maintain a paying egg farm. He must produce the stuff right at home on his own farm, where he can be sure of what he is getting for his time and money. More failures result from a lack of health and vigor in the breeding stock than from any other cause, while

No. 2. Cheap, serviceable brood coop for warm weather use. Constructed of 2 in. strip, wire netting and roofing paper. Dimensions, 2½ ft. wide, 6 ft. long and 3 ft. high.

on the other hand the raising of husky, livable chicks with the right sort of equipment and range becomes a matter of ease. The quality of the breeding stock is the keynote of a poultryman's success. The man who has set to work to carefully build up his flocks from matings selected for health and vigor, before greatly enlarging his operations in the production of poultry, is bound to come out successfully. For when he has learned that the health of the stock is of greater importance than their number, he has mastered enough of the craft to start him successward. All future branching and expansion is a simple matter of transition; for the man with two hundred or more unquestionably good breeders can produce the goods to fill his laying houses and keep on producing them.

The chief difficulty with the amateur is that he wants to do large things at once. Wholesale methods are in order after a certain groundwork of essentials has been mastered. These facts I endeavored to impress upon my neighbor friend, and

No. 3. An 80 per cent hatch of crossbred Barred Rock and Silver Wyandotte chicks.

after various arguments, among which the most convincing one was showing him a mound of earth where I had buried 400 day-old chicks not a great while before, he consented as a personal favor to give my plan a tryout. It would not cost much at the start, and in case of failure he was sure he could get chicks in large quantities on short notice later. Accordingly he built a poultry house suitable for one hundred hens in the fall, and at that time when good big healthy hens were selling around ten cents a pound, he picked up here and there a few at a time, about ninety good big hens of various colors and breeds. These cost on an average sixty-five cents each and were to be his incubators and brooders for the coming season, consequently no males were kept at all.

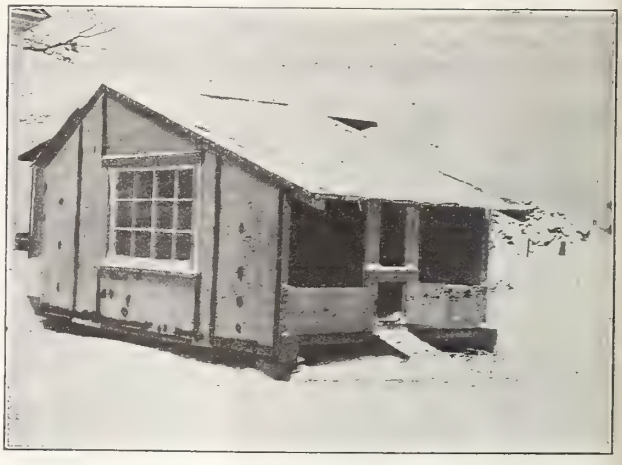
During the winter these hens were well fed and laid fairly well, but the main point in view was to have them in good flesh in the spring to encourage the broody tendency as much as possible. In March another 20x20 ft. house was put up and equipped with nests for use as a sitting house. Eggs for hatching were ordered from four breeders whose individual strains were pretty certain to be of no relation to each other. Two of these breeders could be reached by phone economically and as fast as the hens became broody, one, two or four sittings of eggs, fresh laid, could be secured on short order. None were set until the first week of April, the majority of the chicks coming out early in May and none later than the last of May. From each of these breeders, whom we will call A and B, were secured five hundred eggs, and from the two others, C and D, two sittings each were purchased. All eggs were tested out and the

remaining ones doubled up, the hens reset, and some hens were allowed to hatch two full hatches. The best appearing hens were given an average of twenty chicks each and placed in a good sized orchard in small 2x5 brood coops, completely roofed over. The chicks were given free range, though the hens were kept confined for some time. The coops were moved frequently to avoid killing out the grass growing under the fruit trees. When four weeks old, the chicks were fed from large wooden hopper exclusively and water supplied in shaded troughs. Wheat, corn, beef scrap and a dry mash, rich with ground oats and bone meal, were kept before them constantly, as well as grit and shell fed separately. Close watch was kept on the hoppers, and it was found that corn and beef scrap were the foods most eagerly eaten by the growing chicks.

The chicks grew by leaps and bounds. Of course there were

No. 4. A 16x12-ft. Woods' type house in which was run an oil burning brooder stove which brooded 1,100 chicks in one flock. The chicks were hatched April 14th. Fine ventilation was made possible through the muslin frames in front, and through the top sash, one of which was continually open several inches, and ventilator boxes in the rear wall. One hundred and ten gallons of oil was used to run the stove, due to continued cold weather, but chicks made strong, rapid growth. Of the 1,100 placed in the house 900 were marketed, and a good number of the lost were taken by hawks.

the usual casualties. Eggs were broken at times in the nests, hens refused to keep to the nests after a few days of covering an especially fine lot of eggs. The small brood coop will be tried another season for the broody hen, as in this way she is more under control. Hawks picked up a chick now and then, and two-legged thieves carried off three broods in one night, hens, chicks, coops and all—even the water pans went along.



There is one thing I would say for the Leghorns—fewer chicks are picked up by hawks than any of the heavier breeds, who seem more stupid about such things. I had considerable trouble with one hawk last year, who would alight on a tall oak on the edge of the wood lot and wait for a chance to drop down on a chick passing beneath. Twice I startled him into dropping his prey, a Barred Rock each time, although there were as many White Leghorns on the same range, and the third time I landed him with five charges of number four shot.

Little trouble was experienced with lice or mites. Brood hens were regularly powdered, and all coops kept well sprayed. As the hens weaned their chicks, they were either fattened for market or retained as brood hens for the future, depending upon their work as mothers and physical condition. As long as a hen is active and healthy she is never too old to raise a flock of chicks. As the marketed hens were in good condition and sold at a favorable season, they showed a good profit over their original cost. The cockerels were removed as soon as they could be selected and placed on a range of their own in company with the old hens. I have found that cockerels mature better and develop into better breeders when allowed to run with a few hens and possibly a cock or two to teach them good manners. They must, however, have separate quarters from the old birds for roosting, and the smaller the flocks the better they will do.

The pullets were allowed to remain in brood coops in small flocks until large enough to be moved to their permanent quarters. At this writing (July 22) there are close to 500 of about the finest, healthiest lot of chicks running in my neighbor's orchard I have ever seen—certainly unsurpassed from the viewpoint of health and vigor. This much is certain—they are a finer lot than could have been gotten together by other methods, and he has learned several hundred dollars' worth about the business. These chicks will be used exclusively for breeders the coming season. After repeated cullings they will be mated up as follows:

Cockerels from the A strain will be mated with the B pullets, and B cockerels with A pullets. The best cockerel from the eggs secured from the breeder C, which came from a heavy laying pen, will be mated up with five of the best pullets secured from the D stock. This mating is to secure cockerels for the succeeding year. Thus by condensing four strains into one, there will be little or no loss from debilitated chicks, the usual result of inbreeding. My experience along this line has convinced me that inbreeding has the effect of lowering vitality and productiveness. I know the opposite of this statement is held to be true by a large number of breeders, but there is no question in my mind that the more new blood, and the "newer" it is, brought into the matings for the production of meat and eggs, the better the results. I have great faith in the crossbred fowl as a quick, profitable grower, and venture to make the statement that the reason so many farm flocks of poultry survive extreme conditions and gross neglect is because of the mixture of blood that flows in their veins. Farmers who buy new male birds each year from foreign strains in different parts of the country never hear of white diarrhœa, or other popularly talked of poultry diseases, and their losses of chicks due to inherited weakness are very small. A number of farmers have told me that as soon as they stocked up their places with closely bred stock their "luck" with poultry changed and all kinds of trouble began. Understand me, I do not advocate mongrel stock, but there are always two sides to every question, and out-crossing with poultry is no exception. For market poultry I have found nothing finer than the Barred Rock-Silver Wyandotte cross, the only possible objection being the black pin feathers.

The beginner with poultry cannot do better than to aim for

No. 5. A 6x12-ft. Tolman house for breeding pen of White Leghorns used during exceedingly bitter and severe storms. The cockerel escaped with only very slight frost bite at the points of his comb, while sixteen Rock cockerels in an 8x12-ft. muslin front house directly back of this pen were badly frosted. This instance among others has proved the value of the open-air house.

the establishment of a flock of healthy, vigorous breeders. Open-front houses should be used exclusively in all sections of the United States or Canada. I have three types of these houses in constant use on my farm and prefer the Dr. Woods type—especially the 16x20 ft. house. It furnishes ideal quarters for a flock of fifty breeders.

To be successful the beginner will do well to allow the old hen to hatch and rear the chicks, allowing them free range and with food in hoppers constantly at hand. There will then be an equal chance for a steady, even development in the chicks, which will tell later in the breeders selected therefrom. You have only to watch the scramble and note the shy specimens, mostly pullets, hovering about the edges of hand-fed flocks to appreciate this point. Especially should the beginner go slow in inbreeding until, at least, his flocks are well established and he knows what he is about.

Impressions of the Chicago Convention

Less Oratory and More Time Devoted to Interchange of Helpful Ideas Would be Welcome

By Helen T. Woods

THE WORTH OF an individual is largely dependent upon his manner of association with his fellows. The man with eyes and ears open only for the absorption of his own ideas gradually gravitates to where he belongs—the provincialist class. In association work very few of such can long exist, since the rule works both ways, and competency eventually gets where it belongs—in the lead.

The American Poultry Association can do no more worth while thing than that of encouraging attendance at its annual conventions, while at the same time making these meetings of real and lasting benefit to the visitor, so that he returns to his home refreshed and inspired to surpass former undertakings.

The life and growth of any organization is the life and growth of its members and those who are destined to formulate and carry to success the future policies of the American Poultry Association are those fitted naturally for leadership, and having at heart a deep and abiding interest for the future of the poultry industry. The path to glory is no longer one of long-winded, flowery speech. Only he who serves the organization in a genuinely helpful and far-sighted manner can long survive. The idea of a chosen few being alone fitted to sway the multitude, with the ban of suspicion hurled at the new comer, savors of old-fogieism. "There are greater things in heaven and earth than we have dreamt of in our philosophy." Out of the depths of comparative unknownness (so far as the association is concerned) comes a man fitted through natural interest and through long years of preparation to accomplish the great task of getting out the first elementary school text book on poultry keeping. New names, strange voices, hitherto unknown leaders give new life and power to an association.

The individual who seeks an office merely for the prestige and fun he gets out of it, rather than the good he can do the association soon becomes a block to progress and it is only a question of time (fleeting time) when the blockade will be broken. The right men serving in the proper capacity can so simplify matters as to make a convention of men and women bent upon a common desire for the betterment of an industry, "a thing of beauty and a joy forever." It can do away with the long-winded discussions of matters about which the discussers know little. Small committees, wisely chosen, can do such work far better and with a neatness and dispatch unknown in a general convention debate. A discussion of the various Standard points of a breed or of the drawings of various breeds is decidedly another matter, since its educational value is easily apparent, especially with the method of licensing judges in operation at present. It is probable that the great majority of those in attendance at convention meetings are licensed judges and since the present method of granting licenses is a questionable one, these discussions as to the Standard points of the various breeds, give a better opportunity for enlightenment along this line than most judges could otherwise take advantage of.

There is, however, an endless amount of detail along other lines that could be more quickly and wisely disposed of by committees. Just as the immense traffic of our city streets blocks progress today, and must within a very few years be otherwise disposed of (underground or overhead), so must traffic matters of organizations. A convention of men and women gathered from widely separated communities can do better than be held up by such "traffic" blockades. Think of the educational lectures, moving picture demonstrations, social interchange of thought and ideas among those mutually interested, that we missed on account of matters brought up, that could have been much better taken care of by the "underground route." The organization to be, in aiming to benefit any industry will not be held up at every crossing, and slowed down to the creeping point between blocks by traffic matters that can be better and more swiftly cared for out of the way of the multitude.

The people convene for a purpose. They need the association with others engaged along similar lines of endeavor. They need the encouragement, the helpfulness, the environment of an enthusiastic, prosperous body of men and women convened for a common good—that of building up their particular industry. They do not want or benefit by discussions of personal differences.

The tax on all progress is inefficiency. Nearly everyone has to be supervised. He hasn't the ability, or the persistency, or the determination to keep things moving in the right direction unless someone stands over him. We have to pay for this in one way or another, either in dollars and cents, in time or extravagance, but we always pay. Those who can be trusted to work without a manager or a time clock, gradually get where they no longer contribute for the privilege of having a spotter to keep them on the job. These are the members of an association who can in time be trusted as committeemen to keep the "traffic" moving in the right direction but always "underground" and out of the way of the people in general.

There are usually a few disorganizers, in any organization, who object to any innovation or change in the matter of conducting association affairs—not from any logical reason but because they did not personally instigate it. They block the progress of an organization by not only failing to help it forward, but by actually hindering others from accomplishing anything. They greatly increase the running expenses in more ways than one—but principally by taking time, that should be devoted to more worth-while matters, for the sake of personal argument.

It should be the aim of the American Poultry Association to do away with this waste of time as it is a direct hindrance to its betterment. What we need in order to evolve a twentieth century organization destined to be of real and lasting benefit to the poultry industry, which means real and lasting benefit to humanity generally, is an organization whose management is in the hands of capable committeemen requiring little or no superintendence on the part of its members, its conventions being held primarily for the encouragement, inspiration and educational advantage of its members.

GETTING RID OF MITES

A very successful, practical and easy method of ridding a poultry house of mites is as follows: Shave one 10-cent cake of laundry soap into a pint of soft water; steep it until a paste is formed; stir in one pound commercial cresol, and beat or allow to stand until a paste is dissolved. Stir in one gallon of kerosene. Double the quantities if you wish. Cresol may be obtained from a druggist at about 30 cents per pound. Care should be taken not to get any on the hands and face. Apply the undiluted mixture to the interior walls and roof with a brush.

Although one of the smallest of the parasites which infest our poultry, the red mite, owing to its large numbers, is one of the most serious. This is especially true during the warm summer weather, under which conditions they multiply most rapidly. Dark, damp, dirty hen houses are especially favorable to their growth, and it is in houses of this sort that they are found in largest numbers.

Mites, like some of the larger "varmints" which prey upon fowls, do their evil work mostly at night. They crawl upon the hens while they are at roost and suck their blood. As soon as they are full they return to the cracks and crevices in and around the roosts. They are also found in large numbers in dirty nests, and are the direct cause of the death of many setting hens during the warmer months.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry apphances in the country.

Our 46th Anniversary in January.

IN JANUARY American Poultry Journal will celebrate its 46th birthday. January 1, 1915, marks the beginning of the 46th volume of the "oldest and best" poultry journal and we intend to make the occasion a memorable one.

The January issue will be a special birthday edition printed on high grade heavy enamel book paper with a special cover to match. Artist Stahmer has prepared an attractive cover design in three colors to celebrate our anniversary.

The editorial staff is preparing a number of special articles that will make this birthday issue one of unusual and long to be remembered interest. There will be a number of unusually interesting articles giving the experiences of men and women who know how and who are doing things in the poultry world. We are planning for an edition of from ten to twenty thousand extra copies in addition to our big regular monthly edition and these extra copies will be circulated among live, wide-awake poultry keepers who are certain to join the big family of American Poultry Journal subscribers.

A special feature of this Anniversary number will be the absence of free reading notices. Following our motto of "We lead—others follow"—we believe that the time has come when these notices have ceased to be of any value to advertisers. The readers are fatigued with reading where this breeder or this manufacturer has the greatest fowls or goods on the market. They have come to consider it as "worthless" and do not read them any more.

In place of these free reading notices, we will publish high grade illustrations of poultry farms and appliances together with unretouched photos of fowls. In this way the buyer knows what he is getting and can learn more from one photo than he can from a page of reading notices. The picture tells the story at a glance and tells it truthfully, therefore we will cease publishing these readers.

If you have not already renewed or advanced your subscription, DO IT NOW and make sure of the 46th Anniversary Number. You will want it. It will be well worth while and it will be a magazine that you will desire to give a permanent place in your poultry library.

Line up now for the celebration of American Poultry Journal's 46th birthday.

Unretouched Poultry Portraits.

DURING the year to come American Poultry Journal intends to specialize in unretouched portraits of Standard-bred poultry. Our artist, L. A. Stahmer, has proved beyond doubt that beautiful and artistic illustrations can be made from actual portraits of thoroughbred fowl with no need for retouching.

Fowls can be pictured exactly as they are without any faking of the picture, and the illustration can do justice to the fowl, the variety and prove a credit to the breeder. Mr. Stahmer has been making fine pictures of some of the best Standard-bred birds produced in this country, that show the birds just as they are. The portraits are portraits and not idealized pictures that show the artist's skill in faking and retouching.

The very best pictures of real fowl that can be made will be used exclusively in American Poultry Journal this coming season. If you want to see what the show winners actually look like when on exhibition you will find what you want in A. P. J. illustrations.

At the present time much effort is being given toward securing the truth in advertising. We believe in and desire to encourage the truth in advertising and truthful advertisers. We believe that readers everywhere will welcome truthful portraits of thoroughbred poultry. Whenever you see under an illustration in A. P. J. the legend, "Engraving made from unretouched photograph A. P. J." you can feel certain that you are seeing a faithful representation of the bird as it actually is. We believe that the day of the retouched, faked and skillfully idealized poultry portraits has gone by and that fanciers everywhere will welcome truthful pictures. The place for idealized pictures of poultry is in the Standard where the fancier is given the portrait of an imaginary or supposedly ideal, 100 per cent perfect bird as a pattern to work by.

If you want the best truthful portraits of real birds just as they are you will find them in American Poultry Journal this coming season.

From a Woman's Viewpoint.

THROUGHOUT the United States and Canada there are a good many women engaged in poultry raising and many of these have proved themselves capable of breeding birds of very high quality in their particular varieties. They are fanciers in the truest sense of the word. In addition to these we find through all sections of the country both large and small commercial plants managed, and in many instances, operated by women. The number of failures in poultry culture under women's management is noticeably small. Women naturally give greater attention to detail, are less prone to give up, and from the fact of their being comparatively new in business, take a keener interest in making a success of their undertakings. In fact, there is every reason to believe that in the not far distant future, women will take the lead in the production of poultry—if they do not today.

In visiting fanciers in various sec-

tions of the country, we find that much of the detail in breeding high-class stock is left in many instances to the wife, that the careful attention given to pedigree or line breeding becomes her duty, and that preparation of show birds is performed under her supervision or by her personally.

On large and small commercial plants, it will be found that a goodly share of the detail is looked after by women. In the gathering, packing and marketing of eggs women have set a standard that many poultrymen have found difficult to live up to.

The American Poultry Association, as the official organization for the promotion and encouragement of all branches of poultry culture, welcomes both men and women members, though the actual number of the latter remains comparatively small. There is undoubtedly a wide field along this line to greatly increase the membership, and at the same time infuse new life into the organization. In former years, very few women joined the A. P. A., since it stood primarily as a man's organization. The letter from Mrs. Judy, veteran woman fancier, read before the convention in Chicago, proclaims woman's interest and enthusiasm in matters pertaining to poultry culture. Isn't it about time to extend the right hand of fellowship to women breeders and fanciers, making it felt that the American Poultry Association is an equally helpful organization for both sexes, in fact as well as in name?

———o———

"Better Late Than Never."

THE U. S. Department of Agriculture has recently promulgated an order that after May 1, 1916, it shall be unlawful for the label or container of any article of food or drugs to exhibit the now familiar legend, "Guaranteed under the Food and Drugs Act of June 30, 1906, Serial No. ———." Manufacturers whose guarantees are now on file with the department have been notified that said guarantees will be stricken from the files and their respective serial numbers canceled.

A most commendable amendment to the invaluable, though much misunderstood, numerously amended and variously interpreted pure food and drugs act of Roosevelt's administration.

An amendment that should have been enacted shortly after the original act became operative, for it was at once recognized that the requirement for the appearance of this "guarantee," accompanied by the serial number in the form prescribed by the act on all labels and packages, was an authorized misbranding to conform to the conditions of a law that makes "misbranding" a crime.

The department has never had to urge manufacturers of food or drugs to file their guarantees and secure their serial number, for they were quick to recognize the advertising value of what appeared to the general buying public to be the government's endorsement.

While it was far from the intent of the original act that this guarantee and serial number, as it has and now appears on food and drug products, should be construed to imply that the particular article of food or drugs has been examined, guaranteed and approved by the department, it has been too generally so construed by the buyer and ultimate consumer.

Naturally the manufacturer has made no strenuous efforts to remove this erroneous interpretation, but just why Washington has delayed over seven years to order the removal of this misleading and deceptive legend, those who know are not explaining.

The "guarantee" under the present provisions of the pure food law has no reference to the consumer; it simply guarantees the wholesaler, jobber and retailer that the manufacturer assumes all responsibility and liability in event any of their products are found misbranded or in any way amenable to prosecution under the law; the serial number is awarded for the purpose of identification.

In filing his "guarantee" with the department and applying for a serial number, the manufacturer makes affidavit that his product or products are not or will not be "misbranded" and will conform to all the requirements of the act, but he is not required to even name his product or products, much less furnish the department his formula or describe the constituents that go to make up his finished product.

But the filing of this affidavit and the printing on the label or package of the fact that it is guaranteed under serial number —— by no means exempts said manufacturer from prosecution for violation of the law—it only exempts the innocent (or culpable) wholesaler, jobber or retailer in whose hands the "guaranteed" but offending product is found. You cannot by law force men to be good or even honest.

Until we learn how to enact and enforce laws that render their violation unprofitable, there will be found those who will risk the possible penalty for the certain profit. Greed for gain is a moral astigmatism confined to no particular class or people.

Among other activities and accomplishments, Uncle Samuel is doing some pretty good work in chemical research and analysis and some day we anticipate that he will prohibit the exposure for sale of any article of food or drugs, exploited under a trade name that gives no indication of its constituent parts and their proportions, until said product, compound or mixture and formula be submitted to the proper department for examination and official approval of its recommended use. The public is not particularly concerned as upon whom the liability rests for violation of the Pure Food and Drugs Act, but they are vitally interested in getting what they pay for and imagine they are obtaining, instead of "something just as good" because it pays a larger profit. In these days of intensive competition, trade names are frequently a necessity and may become a valuable asset and as such worthy of protection. And no reputable manufacturer will exploit a product under a trade name that is a misnomer—but, unfortunately, there are others. The former invites and fears no "examination" and can well afford to reimburse Uncle Sam for the expense incurred.

It now costs the government thousands yearly to examine products they only suspect as being misbranded or as not conforming to all the present law's requirements. If a successful prosecution follows, the imposed fines may return the cost but if the product under suspicion proves to be O. K., there is no provision for giving the manufacturer redress in a clean bill of health.

Expert and skilled official investigation should not be limited to condemnation. Extend it to include, under proper restrictions and safeguards, examinations for approval and endorsement. Ped.

———o———

DR. WOODS' NOTES AND COMMENT.

You missed "the time of your life" if you failed to attend the American Poultry Association at Chicago.

San Francisco expects the next convention and should get it. Dr. Lively says the Panama-Pacific Exposition Poultry Show will be a big success and that the exposition is not going to be called off war or no war. Let's hope that we have World peace by then and that the war never reaches this side of the world.

Editor DePuy, of the Advocate, came to the convention in his auto and reports rough riding in Michigan. He says he has been getting his paper supply from Europe and the supply is shut off so that he must hustle for paper near home. Good time to patronize home industries.

W. Theo. Wittman, State Poultryman for Pennsylvania, is a strong and enthusiastic advocate of the Woods' open-front poultry house, doesn't believe in curtains of any kind in a poultry house in most severe winter weather, and says that nobody ever has found or ever will find any frosted combs in his poultry houses. He recommends putting glass on both sides of the window sash for the monitor-top and says that this will positively prevent any frosting of the glass in cold weather. He has tested the house inside and out and kept tab on it with a thermometer and says it is the warmest and most comfortable house for poultry in winter and the coolest and most comfortable house for poultry in summer. If we had known what Theo. Wittman had up his sleeve, we certainly should have steered Harold Nourse around to that institute meeting.

Missouri State Poultry Experiment Station, of Mountain Grove, is becoming quite an important factor in the poultry world these days. The "show me" state is certainly on the poultry map and it is largely due to Director Tom Quisenberry aided by his efficient corps of helpers. Missouri Station is certainly showing poultry people everywhere what effective and good work an independent state station can do when properly backed and managed, and not handicapped by the meddlesome control of a college faculty.

T. E. Quisenberry, his assistant C. T. Patterson, and the rest of the Missouri delegation must have gone home from the Chicago Convention well pleased with the result of their labors. It is no small honor to father the manuscript of the first real school text book on poultry to be officially adopted by the American Poultry Association. Missouri won enthusiastic recognition on the first real show down before the association.

It looks promising for the Market Poultry and Egg Standard and we feel a lively interest in the opportunity soon to come, we hope, of viewing the text.

The committee has carefully safeguarded the contents of this book for the protection of the copyright and until the book is published we can only surmise its contents. The enthusiasm and confidence of the members of the committee, however, regarding the book and their general statement concerning its contents, lead us to hope that the completed book will help to bring about conditions favorable to more and better market poultry and eggs. The fact that the members of the committee stood ready to buy and publish the book for themselves in case of its rejection by the association seems to indicate that the book will be worth while.

It was a happy thought that prompted the Chicago Poultry Society during the closing hour of the convention to present President Thompson and Secretary Campbell each with a gold badge patterned after the badges of bronze supplied to members attending the convention. Pres. Thompson's response was characteristic and to the point. It helped to make friends.

There was abundant good fellowship all through the week at Chicago. It made one proud to be identified, even in a small way, with the great and growing poultry industry. Wherever you meet them, poultry men and poultry women never fail to exhibit real friendship for fellow workers. We made a good many new friends and renewed old acquaintances and we hope we may be able to stand as high in their esteem as most of them do in ours.

With the dark and horrible war clouds now disrupting all Europe and most of the Eastern side of the World and civilization being pushed at least 100 years backward, it does one good to attend a meeting like that of the American Poultry Association at Hotel Sherman in Chicago, where, for the time being, the war was forgotten and wholesome work was done by deeply interested and earnest people for the betterment of one of the greatest utility and fancy producing interests of the present day. Let's hope that all Americans will continue to look ahead and look up and that none of us will turn backward. We all should lend our efforts to the keeping of the Great Peace throughout the Americas.

Did you ever stop to think what the war in Europe means to poultry interests over there and that the great bulk of eggs and birds, whether utility or fancy, are bound to be consumed for food purposes to help the hungry armies and the starving people? When the war is done the world will have to call on America for thoroughbred poultry.

IN FAVOR OF OPEN-FRONT HOUSES.

Editor American Poultry Journal:

I have followed with interest the discussion of open-front poultry houses by Dr. Woods and Editor Nourse of the Poultry Herald, more especially in relation to the merits of the Woods' open-front house.

I wish to give you my experience, which substantiates Dr. Woods' claims for his house. My open-front house is a different model and, as arranged by me, is even more open, considering difference in depth, than is Dr. Woods' house. The houses I use are the old-style, shed-roof, colony houses, 7 feet 6 inches high in front and 5 feet high in rear. I wish to call particular attention to the fact that these houses are only 10 feet deep.

I run the whole front of these houses open from the plates at roof to within 18 inches of the floor. In the rear there is a drop-slide 9 inches wide the whole length of the house close to plates near roof. This rear opening is open all the time except in very cold weather.

These houses are run wide open from about March 1st to December 1st, at which time I use a coarse burlap curtain in the lower section, put in at night. There is also the same kind of a curtain for the top section that fits like the top of a double window and can be pushed up to any desired height. This top curtain is never used except in very severe cold weather when the thermometer registers zero or below. At such times I push it into place and leave a space entirely open about a foot from the top. The curtain is never entirely closed.

My experience under these conditions, with thoroughbred Barred Plymouth Rocks, has surprised me. I have used houses of this type for five years and the results have been fine. Each year there has been improvement in the general health and vigor of my flock. Sickness of any kind is practically unknown among my birds. The egg yield has increased, there has been improvement in the fertility, the chicks are strong, hardy and very easy to raise, and there is very little loss between shell and maturity. For the past two seasons I have had no trouble in getting eggs in January that run 90 per cent fertile and February eggs give fine hatches. I have never used the Woods house, but from my experience with open poultry houses I am convinced that they are all right and that the Woods type house gives the birds more protection than my house does. I feel that I am doing remarkably well with my narrow open house.

It is contrary to general advice to run houses as wide open as I do and it has been claimed that the draft is liable to cause the birds to catch cold. Possibly that is so, but my birds are not affected by the drafts and do not catch cold, even when it is below zero. I take out the curtains in the morning and keep them out all day.

As to frosted combs, I have not had one on a female in three years, but occasionally have a male bird slightly touched. When this happens I grease him up with vaseline and he comes around all O. K. When I first used these houses I had plenty of frosted combs, but found the cause in oiled muslin that I used for the curtains. After substituting coarse burlap for the muslin the trouble righted itself, which shows plainly the need and value of abundant ventilation.

Extreme cold weather being supposed to be detrimental to large egg yield, I quote records made by two pens in February, 1914, which month was considered to be, and further verified by weather bureau records, the coldest we have had in 40 years. The two pens of 14 birds each produced an average of 20 eggs per bird in 28 days; several hens laying as many as 24 eggs in the 28 days, as I can vouch for by my trap-nest records. One year ago during the same month had two pens of ten birds

A. E. MARTZ & SON Buff Orpington Specialists BOX A ARCADIA, IND.

each make an equally good record. I quote the February record because of the extreme cold weather. Not only February yield was good, but there was good egg production every month. Three pens containing 40 pullets made a record, showing an average of 218 eggs each for one full year ending October 31st.

I attribute the good health of my birds and the good egg yield largely to open-front housing, and would like to know if the people of the North and West can duplicate these results in the closed houses of the type advocated by Editor Nourse.

Just because the mercury doesn't hit the bottom of the thermometer here in the East and show 30 to 40 degrees below zero, the people in the Northwest may think our winters are not severe, but when the facts are considered and due allowance made I firmly believe that we in eastern Massachusetts have colder weather at times than that of the Northwest. Living as we do close to the ocean, the cold air is more damp and penetrating, and when zero is reached and the cutting-to-the-marrow air is with us, I believe it is harder on human beings and all animal life than the lower temperatures where the air is dry.

I would like to see more people using open-front poultry houses. Fresh air helps birds and gives the owners more eggs and healthier fowls. The fresh-air treatment of human beings and animals is no experiment, so why should some people be so skeptical of its merits? I know from experience the great benefits of fresh air and hope that American Poultry Journal will keep hammering away until every reader who keeps hens houses them in some kind of an open-front, fresh-air house.

Thomas M. Brennen.

East Walpole, Mass.

A NEW POULTRY ASSOCIATION.

Abington, Mass., is surely a wide-awake town when it comes to poultry. Visitors to that town have remarked this when they have attended poultry meetings there. Speakers rarely find so many or such interested hearers.

Inspired by a common need and purpose, a number of the residents of Abington, Mass., resolved last spring that they would organize a local poultry association. Articles of association were prepared, and a large number of persons affixed their signatures. A meeting of the subscribers was held in I. O. O. F. hall on the evening of April 15th, and organized by the adoption of a constitution and by-laws and the election of the following officers: President, Charles E. Allen; vice-president, John J. McCarthy; recording secretary, Leroy Grinnell; corresponding secretary, Edward C. Cushing; treasurer, Harry E. Pennington; executive committee, Chas. E. Allen, John J. McCarthy, Leroy Grinnell, Edward C. Cushing, Harry E. Pennington, Seth Curtis and Bernice V. Blanchard. The appointment of a membership committee was left with the president and recording secretary, who later appointed to this committee Jesse L. Staples and Albert C. Reed, both of Rockland; Elmer F. Benson, of Whitman; John F. Hollis, of North Abington, and Willis A. Calkins, of North Abington.

The first public meeting of the association was held on the evening of May 20th, and was addressed by Fred W. C. Almy, of Tiverton Four Corners, R. I., who gave an interesting account of his experiences as a poultryman and a description of his plant.

At the June meeting, held on the 18th, Senator Ezra W. Clark, of Brockton, described the manner in which laws are made by the general court. The bill passed by the last legislature, making poultry stealing a felony in Massachusetts, was discussed. The president, who spoke for the bill before the committee, told of its consideration by the committee on legal affairs. Representative Harold P. Guerney, of Whit-

RED SUSSEX **RHODE ISLAND REDS** GOLDEN CAMPINES

Never before in the history of Carver's Red Farm have we had such youngsters maturing as this season. Every effort has been exerted the past year to place our standard on the top round, and we now offer to our customers this fall birds that can win in any show. Write us just what you want and we will give you our down to ROCK-BOTTOM prices.

A. A. CARVER, Specialty Breeder, Carver's Red Farm, L. Box 2, SEVILLE, O.

More Good News about **BYERS' STRAIN ORPINGTONS**

BUFFS — BLACKS — WHITES

My same square deal policy is being perpetuated; a little more quality is being furnished for a given figure; a higher grade of stock has resulted from my past seasons matings than ever before; a higher quality, therefore, can and will be supplied during the approaching stock season. A pronounced and distinctly uniform type and color obtains in my better BUFFS, BLACKS and WHITES; the desired size and vigor is an exceptional feature with my line this year.

All this is a natural result of my 15 years of constant, persistent and consistent effort to improve the high standard of quality to meet the public demands of tomorrow instead of yesterday. Your best interests will be served on advance orders.

C. S. BYERS (Successful Orpington Specialist 15 Years) HAZELRIGG, INDIANA

Crusader III, a Boston Winner

Regal Facts Are you a breeder of White Wyandottes or are you thinking of taking up this splendid variety? Let me present a few facts for your consideration.

1—Regal White Wyandottes being bred in a Northern Climate have always been noted for size, vigor, typical shape and silvery white plumage.

2—Eggs hatch phenomenally well and the big plump chicks grow like weeds.

My flock of one thousand January and February cockerels and pullets cannot be duplicated by any other breeder in America.

3—My eight years' record at the New York State Fair is forty-two blue ribbons out of a possible forthy-eight.

4—At the Boston Show, 1913, in the very home of the White Wyandotte, the Regals beat all previous records by winning best display with a score of seventy-two points which was twelve more than my twenty-one competitors combined.

5—As a heavy laying strain they can hold their own, one pen of nine females averaged last season 199½ eggs per hen and I have individual records sworn to by customers running as high as 235 eggs per year. Dorcas my foundation hen had a record of 241 eggs.

6—The Regals hold an unique position. They have all the utility qualitities which recommend them to a market poultryman while on top of all this they can go into the largest shows in America and win over the exclusive exhibition strains.

To quote Judge Drevenstedt, the greatest living authority on the Wyandotte: "Your birds have been bred to the Wyandotte type most consistently ever since I first handled and judged them at Toronto many years ago. They are true Wyandottes in shape and have the color to go with it." All over America my customers are winning the blue ribbons. Why not send me a trial order and become acquainted with AMERICA'S FINEST WHITE WYANDOTTES.

JOHN S. MARTIN :: Box 51 :: PORT DOVER, CANADA

man, described the passage of the bill through the House, and Senator Clark its passage through the Senate. The subject was one of intense interest to the large number present at the meeting.

Plans for the coming winter are well matured. Several interesting speakers have been secured. An interesting feature of the season's meetings will be the exhibition by members of the association of specimens of different breeds of poultry, and criticisms by competent judges, of which there are several in the membership of the association.

The association already numbers considerably more than 100 members, and the membership is expected to reach the 200 mark during the next few months.

The president of the association attended the poultry conventions in Amherst, Mass., and Storrs, Conn., in July, and will give the association the benefit of what he saw and heard at the next meeting in September.

Plans for a poultry show the coming fall or winter are under consideration by the executive committee. In this and in many other ways the association is expected to prove of great benefit to poultrymen in Abington and the surrounding towns. The membership already includes residents of Brockton, Bridgewater, East Bridgewater, Whitman, Rockland, Norwell and other places. All persons interested in poultry are eligible to membership in the association.

CONCRETE POULTRY HOUSES.

BY A. D. POWERS.

Do you remember how long we slept in wooden beds before we found out that iron beds were better? Our mothers and grandmothers fought bedbugs as poultry raisers fight mites and lice. It was a disgrace to be seen cleaning a bed of bedbugs, still the people who never cleaned most always had them. Then we got iron beds. I believe they originated in the jails and lunatic asylums; now everybody uses them.

We are told that mites and lice are the greatest problem the poultry man has to contend with. Why not have concrete chicken houses, walls, floor, roof, all made of concrete? Leave as many openings as your fancy dictates and cover them with screen wire or netting. True, a concrete house costs more, but it is worth more. It lasts always, can be cleaned with a hose and made perfectly sanitary. No rats, no cats, no "varmints" of any kind can get into a concrete chicken house.

If you want colony houses, you can make a set of knock-down and set-up molds and make as many houses as you want, all one size, all uniform. True, they are not portable, but why make them portable? You do not have to get away from rats nor move to fresh, sanitary grounds.

The Miller building, in which was located the offices of Poultry Life of America and the Belton Evening News, in Belton, Texas, was recently destroyed by fire. H. B. Savage, publisher of the two papers, has ordered new material and will get to going again in short order.

Ferris Leghorns

BUY NOW

Special summer discounts on old and young stock. Best values we have ever offered. Choice cocks, hens, cockerels and pullets bred from trapnested hens that lay more than 160 eggs a year. **Choice trios and pens** that have laying qualities bred in the bone, and that will also produce good exhibition birds. Ferris Leghorns have been trapnested for nearly 14 years, and will make the best possible foundation stock for egg production. We can furnish **pullets and hens in hundred or thousand lots** at very low prices. Whether you need only one bird or several hundred, it will pay you to get our prices and investigate the quality of our stock before you buy.

Satisfaction or Your Money Back

You can return within three days any birds that are not satisfactory and money will be refunded. All stock is **insured for 30 days**, if any die or get out of condition we replace free of charge. Your success is our greatest concern and we stand back of you with advice and assistance until you are profitably established.

Winners for Any Show

Ferris Leghorns are unequalled as exhibition birds. No matter where you want to win, we have the stock you need—with fine heads, long backs, low tails, pure white plumage and close approach to perfection in every little detail. We have been winning for years at the largest shows and during the past year have won over **50 FIRST PRIZES AT 15 BIG SHOWS** in all parts of the country.

Write for free 80-page catalog giving list of winnings, testimonials, prices of all grades of stock, guarantee and complete information. Tell us your needs so that we can quote prices.

24 PAGES FULL of MONEY MAKING HINTS

Contains Information Never Before Published!

This book throws new light on an old subject. In it, **J. Willard Bolte, B. Sc. in Ag.** gives results of 15 years' experience and acquaintance with practical poultry husbandry. Book discloses ways and means of making poultry business more profitable. Has chapters and notes on all subjects. Some of the important ones are:

How to Start Pullets Laying in Sept. and Oct.
How to Get More Eggs in Nov., Dec. and Jan.
Fattening the Pullet for Early Spring Market
When to Take Cockerels From Pullets
How Breeders Get Eggs That Hatch
Keeping Down Death Rate
How to Cure Egg Eating, Avoiding Broodiness, Forcing the Moult, etc., etc.

The only reason why we give this book free is because it contains advertising for

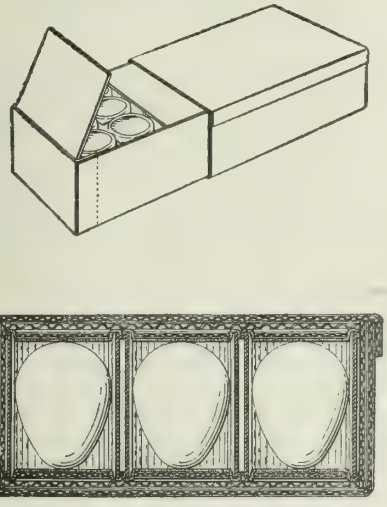
DARLING'S
MEAT CRISPS

This is the new high-power sanitary meat feed recommended by expert poultryers. Makes hens lay 35 per cent more than grain foods; brings 20 per cent more fertile eggs; puts on 56 per cent more flesh than vegetable matter. Darling's Meat Crisps are 50 per cent **higher** in protein than meat scraps—more uniformly ground, cleaner, sweeter. Lowest in fat and fibre, both being practically eliminated under scientific preparation. Three pound package, 25c.

Get it at your dealers. If he isn't supplied, write us and we'll take care of your wants. **Remember, Book is Free.** Send postal for copy. Mention dealer's name.

DARLING & COMPANY DEPT. 2 U. S. YARDS **CHICAGO**

Recent Inventions for Poultrymen



By Lester L. Sargent, Patent Attorney, Washington, D.C.

A Poultry House, invented by Andrew A. Kramer, Kansas City, Kansas, is designed to make the cleaning out of droppings easy of accomplishment. It has an inclined droppings board arranged beneath the roosts, with the lower end of the roost supported on the upper end of the droppings board, and the lower end of the latter terminating at a clean-out opening in the wall of the poultry house. Patent 1,104,197.

A roost and dropping-board for hen-houses devised by Eben Perkins, Bridgewater, Mass., permits of the exposure of the roost and droppings board outwardly of the hen house so that they may be readily cleaned and aired whenever required. The droppings board and back board which fits into an opening in the wall of the hen house are arranged at substantially a right angle to each other, secured together by braces. They are pivotally connected with the hen house, so that the droppings board may be swung up to the vertical position first occupied by the back board and the latter to a horizonal position for purposes of cleaning and airing. Patent 1,102,794.

A dropping-board cleaner for use with the fixed, horizontal dropping board of the ordinary hen house, has been patented by Joseph A. Conboie, Pittsburg, Cal. A reciprocally operable scraping and gathering device traveling between guides takes the place of the usual slow manual method of cleaning. The new device is operated by a cable-haul-and-return drum, guide pulley, and cable attached to the scraping device and to the drum, which is operated by a crank. Patent 1,102,005.

Robert O. Hammond has invented a new egg mailing case, the patent rights

Egg mailing case patented June 30, 1914, by Robert O. Hammond. Rights issued to Tywacana Farms Poultry Co., Farmingdale, N. Y. No. 1,102,191.

in which have issued to the Tywacana Farms Poultry Company, Farmingdale, New York. The eggs are contained within short upright tubes or cylinders of paper board, provided with cushioned top and bottom flaps, all mounted in a rectangular frame, which in turn is telescoped into an outer paper board box. Patent 1,102,191.

A new automatic poultry-feeder has been patented to William P. King, Syracuse, New York, who has acquired the patent rights from F. R. Parks, of Oswego, the inventor. The device has the usual bait pendulum which when the poultry pulls on the bait attached to it tilts a lever which in turn raises the stem of a valve by which the corn or grain is released from the feeder receptacle to the cone or bell which scatters the feed. Patent 1,104,701.

Carl C. Reis, Lima, Ohio, is the inventor of an egg-testing device which has been patented to the Reis Egg Candler Company, Lima, Ohio. It has a plurality of trays, arranged one above the other, each tray having semi-spherical openings to hold the eggs. An electric bulb or other convenient light may be passed between the trays, and the integrity of the eggs readily ascertained, without unnecessary handling of the eggs for candling. Patent 1,101,882.

A new incubator and brooder heated by hot water has been patented by William C. Fischer, of Phoenixville, Conn. What is claimed as novel is the combination in an incubator of a case, a heating device, a hot air chamber surrounding the heating device and completely shut off from it, means for supplying air to the hot air chamber, means for conducting air from

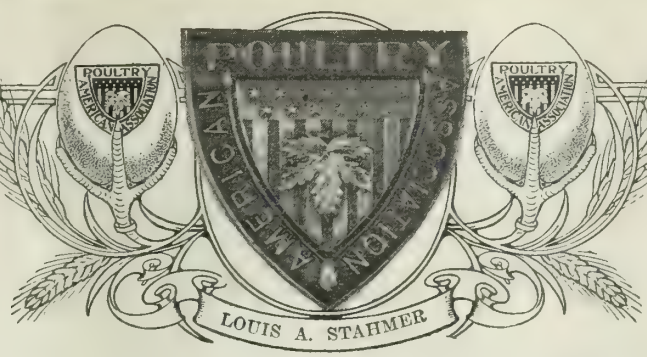
Are You Looking For "Tip Toe" White Leghorns?

BY "Tip Toe," I mean my highest grade birds—the kind that have been walking off with so many of the ribbons.



Yesterday and today I went carefully—very carefully—over my entire flock and lined them up. I am very much gratified with the result. Never have my birds been better conditioned, or quite so promising. A goodly number have the points that delight the exacting buyer who really knows White Leghorns.

Do you want some of my birds this year? Birds of the pure blooded Fiske Strain that carried off more prizes in the shows, both big and little, than any other entered last season.

Do you want some of these dependable birds from the utility ones up?

HARLO J. FISKE
WHITE LEGHORN FARMS
891 F Westfield St., W. Springfield, Mass.

Convention Crows and Cackles

Our motto we will—we did.

About the classiest convention we have ever attended is the Universal verdict. Nearly every state in the Union was represented and close to 540 registered during the week.

As far as entertainment goes the Chicago Convention had every other one backed off the map. The ladies especially had more fun and enjoyment than they ever did before. The reception Tuesday evening was without any doubt the best ever staged anywhere, and was voted a success from start to finish. The stag smoker for men Wednesday night will long be remembered.

Edwards' Rooster parade Monday afternoon escorting President Thompson from the Illinois Central Depot to the Hotel was the talk of the town.

Best looking crowd of women we have had here this summer, was the remark made by one of the Hotel Sherman force.

"Convention Cackles," the paper published daily during the Convention by the Chicago Poultry Society, made a great hit. "Hale's Henographs," "Joos' Joshings," "Fresh from the Nest," "Fresh Goods from Nearby Henneries," "Strictly Fresh Gathered Daily," quoted each day the doings on the Convention floor also what the members did after the convention.

Just because the Federal League has reduced the price of admission to its grounds is no criterion why "Two Franks" is sufficient for the admittance of the Campines to the Mediterranean class.

Leghorn breeders frankly state that these Belgian intruders are entirely too frank to travel in major league company and they should be put where they belong, the Belgian or Dutch International League, or made over into "Hamburgers."

A little thing like appendicitis does not affect Fred Harrison very much, and as his business in Reds is very good he doesn't give a continental how long the scrap lasts in the old country.

Harry Collier made a four-base hit yesterday when he suggested to ram the license down the throat of every dissatisfied poultry judge who is a fault finder with the American Poultry Association.

Dr. H. Perrique Clarke came in yesterday from Indianapolis and will, as usual, fight for the admission of thoroughbred games to the Standard. Keep it up, Doc; you'll get 'em yet.

We have often heard of E. C. Branch's ability as a past master of the Terpsichorean art but he put over a new one on the boat for the dance which he was doing looked like a cross between the tango and the Missouri hen flip.

Hats off to Vice-President Peters. The way he has presided at the convention has been a credit to himself, the association and the great city of Denver.

We certainly have to hand it to Grant M. Curtis, the way he lambasted the knockers of the association should forever shut them up. He used his words with telling effect and had the audience with him from start to finish.

Our new card looks pretty nifty we think, and we will try our best to make good with the new handle.

Our friend, John Martin, came in from Port Dover yesterday and gave us a royal entertainment at the stag. As a piano player John belongs in the major league and is a star of the first magnitude. There is an old saying that art and music go together, and this ex-

E. A. LICHTENWALTER Box A GIRARD, PENN.

plains why his White Wyandottes are serving as models in many a fancier's yard.

The only one that's missing is the Major from Welland, Ontario, Canada. We don't know the reason why he is not here unless it is that he has to join the English army and serve as backstop in the big game now going on on the other side.

Martin Schultes is pulling off some very clever advertising for the Tristate Fair at Memphis. He is a hustler and is going after the business in great shape, and we predict a very large entry from all over the country, as the show is considered an excellent one from the advertising standpoint.

The Ancona breeders have sicced "Ancona Emch" on me to look after their end of the Standard. They certainly picked out the right kind of a fellow, and there is no doubt that he will get what the breeders want for them. Mr. Emch is particularly qualified for this kind of work, "to get what he wants when he wants it," for he is alderman of Toledo and is making some of the big fellows over there dance to his music. There is another good thing about him, and that is that he is fighting for the Kaiser.

The first impressions of Theo. Wittman would make one almost believe that he was a man of the gospel, no matter from what side you look at him—port, star or larboard. We heard him speak at the Y. M. C. A. yesterday for the first time, but say, boys, he can certainly deliver the goods when it comes to talk about chickens.

Things are beginning to warm up, and we predict that when these high-powered six-cylinder self-starting open-muffler gas machines get started we 'uns who own fords (note small letter) won't have much of a show and the race will result in a dead heat between two of the big ones.

By special request of Mr. Lemieux the quartet sang No. 47—"I Love the Ladies"—for the benefit of Hank Schwab and Frank Platt, and they made yours truly sit down to the tune of "Sit Down, You're Rocking the Boat" (very appropriate, too).

If the Russians win the war and it becomes the fashion over here for men to wear whiskers like they do over in Russia, wouldn't Reese Hicks look swell with a full set of Russian soupstrainers?

The Germans are getting reinforcements; Harry Wolsieffer is here.

Wonder if the Pilsener and Wurtzburger will hold out.

Maurice Delano told me a good one yesterday. He said that over in Vineyard Haven so many French, German and English shells sailed through the air that the natives have devoloped into first class baseball catchers and some of them can hold a 14-inch shell without mitt, chest protector and mask. If the war ever breaks out between the United States and Mexico all the government would have to do is to

"Pittsburgh Perfect" Fences are now made of GENUINE DOUBLE GALVANIZED WIRE

The latest and greatest of all improvements we have ever made on the original "Pittsburgh Perfect" Fencing, ALL JOINTS WELDED BY ELECTRICITY, is our new and exclusive method of DOUBLE GALVANIZING FENCE WIRE, which *adds years of life to "Pittsburgh Perfect" Fences* over any fence you have been able to obtain before now. The present-day

"PITTSBURGH PERFECT" POULTRY AND GARDEN FENCES

and FIELD, FARM, RANCH and LAWN FENCES

now last twice as long as ordinary wire fencing, as we have *proved* by innumerable scientific tests extending over many months. The special-formula Open Hearth wire we use takes the proper heat treatment and allows the pure zinc galvanizing to penetrate deeply into the fibre of the wire, leaving a heavy, even layer of zinc on the surface which won't crack, flake, chip or peel off.

Sold by Dealers Everywhere under this Unconditional Guarantee:

WE ABSOLUTELY GUARANTEE "PITTSBURGH PERFECT" FENCING TO BE IN EVERY RESPECT EXACTLY AS WE REPRESENT IT.

Our new catalogue, just off the press, is full of fence information; you need it, whether you want to buy fence now, or will later on. **Ask for Catalogue No. P 39** **Address Nearest Office.**

engage these natives and put one on each battleship to catch the shells fired by the enemy. (I have read so much about the climate of Massachusetts being "brite and fair,"* otherwise I would be under the impression that the heat down there was something terrific and that this was the reason for Mr. Delano's absurd statement. I believe every word he says.)

In Iowa where they raise hay,
Corn, Oats and other truck
There lives a well-known Poultry man
Who is noted for his pluck;
His Pen is mightier than the sword,
His voice and actions strong—
For poultry and its Progress
He lifts his voice in song.
His neighbors call him Richards,
We all know him as "Dick,"
As A. P. A. next president
We think he'd be our pick. (L.A.S.)

When a poultryman wins at a great big show he is all full of glimmer and glammer but just let him lose and those who now shake his mitt will get out their hammer and hammer.

Since viewing the deplumed poultry advocate performing their ablutions at Wilson Beach a few days ago, we have come to the conclusion that the so-called "Divine human form" has sadly degenerated in "Symmetry" (Dad Hewes please notice) since the creator of Apollo Belvidere set the Standard of Perfection many years ago.

Good Bye.

Good bye, dear friends, we're glad you came,
We hope you liked our town—
We tried our best to entertain
And show you all around.
When in the future memories
Drift back to bygone days,
We hope that this convention
Is still sending our bright rays.

Summer Sale of Rancocas Stock

Rancocas have in their breeding yard over sixty birds that have won at such shows as Madison Square Garden and Palace Show, New York City, New York State Fair, New Jersey State Fair, Boston, Philadelphia and Hagerstown. We have hundreds of early chicks bred from them that are coming on splendidly. We propose for the first time in the history of the farm, to hold a summer sale, and to offer at reduced prices some of our record birds, together with 200 other choice specimens.

This will be an unusual opportunity to secure White Leghorns and White Rocks that have won national fame. The sale will include White Leghorn males that have won as follows: First Cock at Philadelphia, 1912; First Pen Male at Philadelphia, 1911; First Pen Male at Boston, 1913; First Pen Male at Madison Square Garden, 1910; and such famous White Rock males as Second White Rock Cockerel, Boston, 1913; Third Cockerel at Madison Square Garden, 1913; Fourth Cockerel at Madison Square Garden, 1913, and Fourth Pen Male at Boston, 1913. This sale will include many other record birds and choice breeders. Write for our summer sale catalog.

Brings This Quarter-Bushel Feeder to You!

Since automatic poultry feeders were first introduced there has been a crying demand for a high-class feeder at a low price.

Realizing this, we have for the past year been perfecting a feeder that embodies all that any other feeder does and just a little bit more.

We have tested it and in each and every case it was pronounced perfect—not one single fault could be found—therefore we have given it the title of the

SIMPLEX Faultless Feeder

The Feeder Without a Fault

Patent Applied For

This feeder will not clog—the wind cannot operate it—it insures proper feeding—decreases feed bills and increases egg production. Bait bar operates rotary, thus scattering the feed thoroughly. Feeds anything from whole corn to millet seed. Made of best grade of galvanized iron—no parts to break, become loosened or get out of order, there being not one particle of solder used throughout its entire construction.

Read This Guarantee—Then Order

If you are not entirely satisfied with this feeder you may return it any time within 30 days and we will refund your money.

THIS FEEDER IS MADE IN THREE SIZES

Quarter-Bushel, $1.00 Half-Bushel, $1.50 One-Bushel, $2.00

Womans Success With Poultry

Helen F. Woods, Editor

A Department for the Exchange of Helpful Poultry Experiences

AN AMATEUR'S EXPERIENCE WITH POULTRY.

By Mrs. S. C. Price.

NOTHING looks easier to the average city dweller than poultry keeping and gardening. With a plot of land at his disposal, the world is his. However, a great many look upon the matter from a changed viewpoint after a try at it. Not so the writer.

Be it known, gentle reader, we were city dwellers, and the lure of fresh-laid eggs and spring chicken in the back lot kept up for months wandering about the suburbs of Chicago in search of a vine-clad cottage and a patch of green where we could engage in the billion-dollar industry. My husband retired from business and wanted to enjoy country living, and I had lately become fairly consumed with a desire to raise chickens, though never having fed one or had one in my hand up to that time.

We found our garden spot eleven miles from Chicago, and after getting the poultry house in proper shape we bought one hundred laying hens and were some surprised later to find that they were not all laying! We then ordered two hundred day-old chicks to arrive ten days later, and purchased two brooders for them. Before this I had subscribed for five poultry journals and was reading them until midnight more interestedly than I should have the latest best seller. It was indeed surprising what a lot of knowledge I lacked regarding this business which had appeared such an easy matter from casual observation.

Before the chicks arrived I had learned that they needed warmth—but, to my surprise, not food. This seemed almost too much to make those fluffy baby chicks wait twenty-four hours after their arrival before giving them an opportunity to breakfast—but I waited, feeling at the time that the responsibility of the universe rested upon my shoulders. For the first few days I devoted plenty of time to getting the chicks accustomed to their quarters, allowing them out on a grass run frequently and getting them back under the cozy hover when they showed the slightest signs of chilliness. They were fed frequently on the regulation diet of hard-boiled eggs, crushed fine, shell and all, and a good, clean, fresh chick food, with water before them at all times. After the first few days the chicks had learned the lay of the land and knew just where to find anything they wanted—warmth, light, air, food, greens, water, grit, and caring for those chicks became simply a matter of moving and cleaning the brooders frequently, and supplying the food and water, both of which were kept before

White Orpingtons *Superb Type and Superior Quality*

January and February Hatched Youngsters for Sale

Never have I had young chicks prove more completely the claim made for them regarding TYPE and QUALITY than does my present young stock. It is indeed a remarkable line of cockerels and pullets hatched in January, February and March. As it is possible to detect any minor faults in birds after they are eight weeks old, and to form a pretty fair idea as to how they are likely to develop, I have placed on sale about 600 of the most promising White Orpingtons ever produced. These are ready for delivery now—large, vigorous, massive birds raised on acres of blue grass sod.

Older Stock at Bargain Prices

Due to the fact that I must make ready for this younger stock, it will be necessary to dispose of a number of hens and cocks on the breaking up of my breeding pens the first of June. These, of course, must go at attractive prices; and here is an opportunity to get some foundation stock, the stamina and vigor of which could only be arrived at through the wonderful blue grass range commanded by Russell Cave Poultry Yards as a branch of the renowned 8,000 acre Elmendorf Farm. An extra fine lot of young Duroc-Jersey pigs for sale.

them all the time. A little later, a good dry mash mixture was kept before them constantly in long troughs made for the purpose. There were also boxes for charcoal and grit and every day I dug fresh sods of earth, giving them all available worms. At such times there was always an immense amount of excitement and scrambling which lasted until the last worm had been duly torn to shreds and entirely consumed.

Every few days I gave them a treat of boiled rice, also chopped dandelion greens, lettuce and Swiss chard or any other greens or suitable table waste that we happened to have. They were supplied with a good grass run, and it was some surprise to me to find what a stretch of land two hundred chicks require in order to keep the grass growing. We found the run had to be constantly enlarged or moved frequently or the chicks would be on the hard brown earth without greens other than those carried to them. I have also found that a spaded-up patch of earth in the run is just as necessary as the grass plot, with perhaps a little in favor of the spaded plot, since the chicks seem to scratch and pick some very choice tidbits from early in the morning until nightfall where they have been provided with this treat.

As our flock developed we placed their coops in the orchard and they were thus able to do a clever stunt in the bug and worm business all summer. And they grew apace. Whenever I noticed a chick that did not look just normal or happy, I placed it in a box by itself in a soft, clean blanket as one would a sick or tired child, and we fed it sparingly until it could again take its place with the others. Of the two hundred I lost but eight, the others growing into fine, healthy birds. The losses were caused mostly by my zeal in providing them with a surprise in the way of a tasty concoction of boiled cornmeal, which they ate very greedily, and which I fed again until some of them began to droop and die. After thinking the matter over, common sense told me that feeding heavily on cooked cornmeal in hot weather would make almost anything droop and die.

My first experience had proved to be such pleasant work, constant pleasure and pronounced success that I ordered one hundred more day-old chicks, putting fifty in a brooder, since the weather was then much warmer. I received one hundred and two chicks in this order, and after about a month now have just one hundred fine growing youngsters. The two hundred and ninety-two chicks are now comfortably housed in four open-front coops with southern exposure, in the orchard, but most of them prefer roosting in the trees. They are a healthy, happy lot and their next move is to be placed, after due selection, in the eighty-foot poultry house in the rear, where I expect to pick up during the coming winter really, truly "day-laid" eggs.

NATIONAL EGG LAYING CONTEST FOR JULY.

The ten leading pens in this experiment are as follows:

Pen.	Eggs.
0. S. C. White Leghorns, England	1,772
47. S. C. Reds, Missouri	1,523
18. White Wyandottes, Pennsylvania	1,439
9. S. C. White Leghorns, Pennsylvania	1427
24. White Wyandottes, England	1,356
59. Barred Plymouth Rocks, Ohio	1,342
53. Barred Plymouth Rocks, Illinois	1,341
51. White Plymouth Rocks, Arkansas	1,338
44. S. C. Black Minorcas, Missouri	1,331
48. S. C. Black Minorcas, Missouri	1,317

The highest hens in this section of the contest are five English hens each having a record of from 178 to 194 eggs. Also a Barred Plymouth Rock from Iowa has 178 eggs to her credit. This hen is one owned by an Iowa breeder who has had pens in our contests for the past three years. The first year his birds made practically a complete failure. The next year they improved considerably, and this year he has made marked improvement. This pen will have some birds which will go far over two hundred eggs. So much to the credit of egg-laying contests.

National White Leghorn Contest.

The hens in this experiment have made rapid advancement in the last few months. They are laying and adding to their records, while many other pens are broody. The ten highest pens in this contest are as follows:

Pen.	Eggs.
79. S. C. White Leghorns, Pennsyvania	1,527
65. S. C. White Leghorns, Missouri	1,516
70. S. C. White Leghorns, Missouri	1,453
61. S. C. White Leghorns, Nebraska	1,372
69. S. C. White Leghorns, Kentucky	1,342
77. S. C. White Leghorns, Vancouver Island	1,338
72. S. C. White Leghorns, Iowa	1,332
80. S. C. White Leghorns, Missouri	1,283
71. S. C. White Leghorns, Missouri	1,273
67. S. C. White Leghorns, Missouri	1,262

The highest records made by individual hens in this experiment were made by hens No. 611 from Nebraska with 190 eggs, and 653 from Missouri with 190 eggs, these two hens tying for second place in the entire flock of 1,040 hens.

National Utility Contest.

In this test, the Barred Plymouth Rocks are in the lead. The ten highest pens rank as follows:

Pen.	Eggs.
86. Barred Plymouth Rocks, Michigan	1,253
92. S. C. Reds, Pennsylvania	1,223
85. Barred Plymouth Rocks, Texas	1,191
94. S. C. Reds, Ohio	1,156
99. White Wyandottes, Arkansas	1,042
97. White Wyandottes, Texas	1,035
93. S. C. Reds, New York	1,003
84. Barred Plymouth Rocks, Missouri	947
87. Barred Plymouth Rocks, Missouri	914
88. White Orpingtons, Kentucky	904

***Licene* Means**

Guaranteed Lice Exterminator

HAS NO EQUAL FOR SCALY LEGS

APPLIED TWICE A YEAR

Used on Many Large Farms and Universities

Sold on its merits **Money refunded if not satisfactory**

Mr. E. B. Thompson, President of the American Poultry Association, says: "I have tried Licene with the best of results; it is a most excellent preventive of lice and a quick and rapid exterminator. Licene should have a great sale to poultrymen who must appreciate its value after being tried. (Signed) E. B. THOMPSON.

CIRCULAR FREE **Price 50c per tube, enough for 200 birds, postpaid** AGENTS WANTED

THE LICENE CO., 1500 Pontiac Bldg., Chicago, Ill.

Well done, Chicago Poultry Society, your arrangements and entertainments were grand and most complete.

* * *

President James W. Ball, ably assisted by Ted Hale, John Brinkama, Henry Eisert, L. A. Stahmer and Messrs. Dietz, Whitney, Lemieux, etc., kept things moving in the usual western manner.

* * *

Mr. Stay-a-way, you were wrong, the weather was just ideal.

* * *

The registry books show just 547 names recorded.

* * *

Revision was completed and a new constitution was adopted. There were some "crossings" but the flyer went through full speed ahead.

* * *

There was a noticeable under-current of adverse feeling displayed throughout the meeting and several times came near exploding. The "Cross of Gold" methods have seen their best days.

* * *

We believe in peace and harmony and hope sane ideas will prevail. Generally speaking we think some advancement has been made and we will still hope for the future.

* * *

The license judge question is no better today than ever. It now has new symptoms which, added to its other complications, makes it a very sick case to handle.

* * *

Forcing the employment of licensed judges upon all associations wishing the A. P. A. specials is rank injustice. We believe that the associations, its officers and members who have to pay the bills and who give their time, work and money for a successful show should have the full privilege to employ the judges they may wish.

* * *

We have a general license, so please don't consider us a knocker. But we do also know competent men that have no license, and we will never favor any legislation that discriminates between men. It is un-American.

* * *

The solution is a judges' association, and now is the time to prepare for this, as the show season is before us and meetings can be arranged.

* * *

Historians of the future can well refer to President E. B. Thompson as the Great Harmonizer. His insistence on harmony and the complete performance of every duty by those so intrusted has borne all that we have to be thankful for.

* * *

Charles D. Cleveland did not accomplish all he desired, but that is not saying he was wrong. Mr. Cleveland fought nobly for fair-play and deserved to win.

* * *

After the constitution and all show

ORPINGTONS Special Summer Sale ORPINGTONS

1,000 Breeders, Buffs and Blacks—1,000

MYRON W. MILLS, Prop. H. H. COBURN, Mgr.

rules were adopted the standing committee reports were read and promptly tabled. Why have committees?

* * *

Link Orr was probably the happiest and most contented man at the meeting. He had his say, then spent his time visiting with friends.

* * *

The three wise men of the East—Atherton, Robinson and Drevenstedt, were sadly missed and so were many others, but probably they consider attending these meetings is like going to a circus. Do you get this?

* * *

Well, we have a few left for next issue.

* * *

The Madison Square Garden New York Show will be held February 12 to 18, 1915. This is later than usual but conditions made an earlier show impossible.

* * *

We favor these dates and think they particularly fit to make this great show also the wind-up exhibit for the season, and would like to see these dates held for years to come.

* * *

This is a late season with early hatched birds a rarity and the later ones just in bloom for these dates. Take it from me, this will be the greatest show New York has ever held for quantity and quality. Secretary Chas. D. Cleveland, Eatontown, N. J., will furnish particulars.

* * *

If it hadn't been for an apple, where would the clothing business be during this warm weather?

* * *

General Harcombe has returned much improved in health to his home at Grand View, N. Y., where his Barred Rocks will receive his future attention. He brought back with him a beautiful specimen of Hippo-Bear that is well trained and is being displayed at Blake & Barnett Co.

* * *

The judges at the Pittsburgh Exposition Show, January 19 to 25, are Messrs. Cleveland, Punderford, Card, Rice, Pierce, Kummer, Schwab, Hewes, Rawnsley and Wittman. This was one of the real big shows last year and again promises to be a leader. Mr. W. P. Craig, 303 Empire building, is the secretary.

* * *

It is rumored that Baron C. S. Th. Van Gink, formerly an artist on the staff of the A. P. J., but now again at his Amsterdam home, is to be married in the near future. He will beat Frank Platt to it yet.

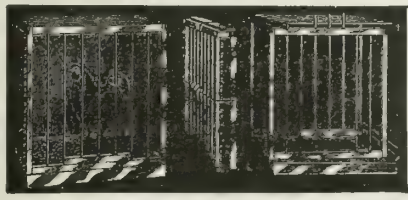
* * *

The Baron made many friends while in the country who all wish him well and will hope that some day he will return and let us have a look. I will wager it is a blonde.

* * *

The Certified Farms Co., Inc., 26 West 59th street, New York, is something new in the poultry line, and is just what this industry has needed for many years. The officers are: Mr. J. C. Punderford, president; Mr. C. J. Fisk, treasurer. Directors: Messrs. Chas. D. Cleveland, Rufus Delafield, etc. All are known poultrymen.

* * *



The objects are to buy and to sell

certified poultry products and supplies, to act as representatives or sales agents for poultrymen, and to also supply their want in feeds and supplies. It is a capital idea that will become popular and will insure to poultrymen the best the market affords at the least possible expense.

* * *

While in New York lately we had a very pleasant visit with Mr. Stewart Haddock, of Poughkeepsie, N. Y., one of our best known breeders of S. C. White Leghorns. He assured us of his great flock of quality and we were easily assured, for we have seen his line as winners for years.

* * *

An ounce of illustration is worth a pound of explanation.

* * *

We have just completed a hurried trip through the East and are delighted with the general pick-up in business, poultrymen particularly have every reason to expect a good season's trade with most excellent prices.

* * *

Our good friend in the East is still at it criticizing everything and everybody. Lately he criticized a little verse we had printed for his benefit which was taken from one of our best verses by one of the world's greatest poets and is considered a classic. Now let him fit his introspective apparatus with a searchlight and he probably won't be so much inclined to criticize. At least let us hope.

* * *

Down in Old Kentucky they have the right idea. There they are forming poultry clubs among the boys and girls in the various school districts and have enrolled over four hundred members into twenty-four clubs. It is the beginning of a state-wide movement to create interest in pure bred poultry, as each member must set at least one setting of choice eggs, raise feed and care for the stock and make at least one exhibit at some fair or poultry show.

* * *

For special prizes breeders are being asked to donate settings of eggs. Here is a cause that deserves help. Mr. H. W. Rickel, Lexington, Ky., is the state agent in charge. Here is a chance to help the cause.

* * *

"Have you any nice beefsteak this morning?"

"Sure, here's some steak as tender as a woman's heart."

"Give me a pound of sausage."

* * *

The American Barred Plymouth Rock Club annual catalogue is just off the press and is being mailed to members. The catalogue is without exception one of the largest and best annuals ever issued and reflects the greatest possible credit to Secretary Riley. Besides the new constitution and a list of members, it is chock full of valuable articles dealing with every side of all questions, making it a book that should be in the hands of every breeder. There are 130 pages and many handsome illustrations also shown. The book is free to members and is mailed to non-members for 25 cents. Send Mr. H. D. Riley, Strafford, Pa., $1. Join the club and get this valuable book free.

* * *

We will accept "Billy" Atherton's invitation and visit Boston soon to rediscover Pi-Alley, providing he will have all dogs muzzled.

* * *

As we are writing these lines the curtain is rising on the world's greatest tragedy. There is as yet no reason for changing the late General Sherman's definition of war.

* * *

Bear in mind the great Williamsport, Pa., show November 16 to 20. For several years this has been the early big event and this year, with several national and state meetings booked with liberal cash and more specials than ever, it is sure to be a record-breaker. If you have never attended the Williamsport show, arrange to do so this year for you have missed something good in the past. Write to Geo. J. Hanks, secretary, 35 West Fourth street, Williamsport, Pa., for list and particulars.

* * *

Glad to know that there will be but one show in Indianapolis this season and that will be held the first full week in February. With Mr. Charles Millhouse as secretary, this will insure Indianapolis one of the big shows of the season.

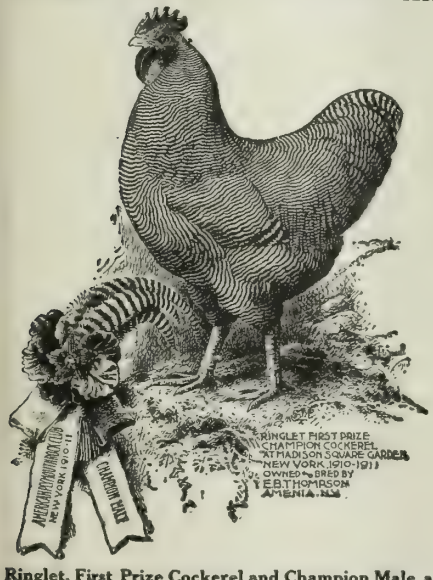
Prince T. Woods, M. D

Finds Market Quotations Confusing.

Q. I find myself considerably handicapped at times by my ignorance of trade terms used in newspaper quotations of the eggs and poultry market prices. Neighbors to whom I have applied for information are uncertain as to the correctness of their understanding of these terms.

What are "strictly fine fresh eggs," "nearby extras," "do firsts," "nearby current receipts," "Western," "do extra firsts"? What are "firsts," "seconds," "candled and recrated eggs"? How many kinds of egg cases are there and how many eggs should each contain?

I thought "nearby extras" meant eggs only a day or two old and of the largest size, extra smooth and fine and brought from farms nearby. But I see that the quotation for "nearby extras" is only 26 cents a dozen, while the "candled and recrated" eggs (which I thought meant doubtful eggs) are at the same time quoted at 29@31 cents a dozen. This is quite confusing to me. Perhaps it is intended to be so.



Concerning dressed poultry I would like to know: What are "Selected heavy fowls," who makes the selection; also what are "small" and "medium" sizes? What are "fresh killed fowls" and what are "Western"? What are "fryers," "broilers," both "nearby" and "Western"? What is the meaning of "dry picked"?

I would also like to know who makes these prices quoted in newspaper reports? Sometimes they seem quite arbitrary and seem to me to hinder business. If I take, today, eggs that were laid by my hens yesterday and try to sell them in Atlantic City I am met by the statement that the newspaper quotation on "nearbys" (which the customer says means "eggs brought in fresh from farms nearby the city") is, say, only 26 cents. Then I get the paper and point out that "candled and recrated" eggs are quoted at 29 and 31 cents. Then I have to argue that my sanitary, clean, grain-fed eggs, laid yesterday, are better than any "candled and recrated" eggs that ever happened and ought at least to bring as much money. Sometimes my argument is effective and sometimes it is not. It is very seldom that I can get at retail for my new-laid eggs, produced under sanitary conditions, a price higher than the wholesale quotation for "candled and recrated" eggs. Can you favor me with some instruction?

Pleasantville, N. J. H. M.

A. We are not surprised that you find newspaper quotations for the eggs and poultry market confusing. Possibly it is so intended. Newspaper market quotations are seldom reliable. Generally they are only the reporter's summary of the average prices of the previous day's trading on the "exchange" or are taken from the printed bulletin of some commission house reporting current prices in "exchange" trading. In any case the quotations represent large lot wholesale prices or, in some cases, jobbing prices. It is generally only on special days, once a week, that the newspaper quotes retail prices. These quotations are seldom any more reliable than the wholesale quotations. Usually the reporter goes to some prominent retailer and gets a hasty summary of his prices on produce for the week. There is a wide variation in retail prices among different dealers and in the same state only a few miles apart the local buying prices for eggs, poultry and farm produce generally may show a very wide variation. The reason for this is that the collector, or buyer, buys as low as he can buy, expects to hold the goods until he has sufficient for a shipment, or divides his shipments to meet the requirements of his trade, must estimate or guess the price he can get for the goods and of course aims to get all the profit he can to pay for his handling of the goods.

Even to briefly explain the marketing of produce and the making of prices takes considerable space. Generally it is only farms having a large or regular output, or co-operative associations, that can deal with consumers and retailers direct. Take eggs for example and note the route they take to the ultimate consumer. In these routes or "trade channels" the eggs pass through many hands and each handler aims to get a profit.

Ringlet, First Prize Cockerel and Champion Male at Madison Square Garden, N. Y., 1910-11, and Grand Sire of My Champion First Prize Cockerels of 1913-14

E·B·Thompson's "Imperial Ringlet" Barred Plymouth Rocks

EARLY WINNING SHOW BIRDS

Hatched in January, February and March of this year

I now offer the finest early hatched exhibition Barred Plymouth Rock cockerels and pullets that I have ever produced. They show elegant size and shape, fine heads and deep narrow sharp clean cut "Ringlet" barring—they are my richest New York first prize blood of the shows of 1912-13 and 1913-14.

These Birds are Ready to Win at the Fairs and Early Shows

The demand for early show birds will be enormous this year and I strongly urge you to place your order as soon as you can. I will hold birds ordered and ship when wanted—the prices will be very reasonable.

I Offer Early Hatched Breeders Also. See My Ad of Bargain Sale of Yearling Birds on Page 1168.

Richly illustrated 76-page catalog mailed upon request. It is full of illustrations of New York winners from life.

Are Ready to Win Any Fall Fair in America

If you need a cock, hen, cockerel, pullet, old pen or young pen to complete your string, write me the show you wish to win and receive my price by return mail.

Owen Farms Readiness

has resulted in THOUSANDS of FIRST PRIZES being WON by customers all over the UNITED STATES and CANADA, and in this year of general shortage of early hatches our youngsters will make an even better record than in former years, as we have more JANUARY, FEBRUARY and EARLY MARCH CHICKS than ever. **Order early and enable us to put your birds in perfect condition for your show.**

First Prize Cockerel, Madison Square Garden, December, 1911

WINTER SHOWS

You are already looking forward to winning your Winter Show and watching particularly promising youngsters as they develop. Your favorite cocks and hens are moulting and you are wondering if they will round to in time to be at their best to win for you. This is the time to take up with me the question of strengthening your weakest spots, as I will book your order upon receipt of a 25 per cent deposit, balance to come before shipment, and you will have the immense resources of Owen Farms behind you to make your victory certain. Have already booked a number of orders for Fall and Winter showing, and **REMEMBER, I will not sell to two customers to compete in same classes.**

First Prize Cockerel, Madison Square Garden, December, 1911

The Utility Qualities

of our birds are unexcelled by any and famous the country over. Perfect housing and breeding conditions, combined with perfect health and vigor, have resulted in strong, husky, big boned birds that lay and pay.

Big husky cockerels in all varieties at $3.00, $4.00 and $5.00 each NOW that will be worth more later. Splendid utility pullets at $3.00 each NOW that will be gems for utility breeding the coming season. I want to reduce my large flocks of youngsters while still on range, so as to have plenty of room in winter quarters. **Buy now before the supply is exhausted.** Later prices will be higher, as the supply through the country is fully 40 per cent short this year.

First Prize Cockerel, Madison Square Garden, December, 1911

Breeding Birds

It is probably a little early for you to definitely plan your matings for next year, as you want your old birds to complete their moult and your young birds to fully develop. When you do decide what you are needing, write me and see if I cannot give you the exact bird or birds you must have to make your 1915 matings stronger than ever. **Owen Farms Prices Are Lower**, quality of individuals and line-bred producing qualities considered, than similar quality can be obtained elsewhere.

Finest Illustrated Catalogue Published—Yours for the Asking

Your Absolute Satisfaction
Means My Permanent Success

OWEN FARMS

107 William St., Vineyard Haven, Mass.

MAURICE F. DELANO, Prop. **FRANK H. DAVEY, Supt.**

The wholesale route may take two channels at the start: 1. Farm producer to commission merchant direct. 2. Farm producer to collector or country store, thence to wholesale buyer, thence to the commission merchant. From the commission merchant they pass on to the jobber. The jobber sells to the retail store and the store to the consumer.

The retail route may take three channels: 1. Farm producer to consumer direct. 2. In large quantities generally to clubs, hotels, drug stores or soda fountains, and restaurants. 3. Farm producer to retail store and retail store to consumer.

Each step in each channel adds to the age of the product and adds to the price. Obviously eggs that are new laid and delivered to the consumer twice a week or oftener are the only really fresh eggs and are, or should be, worth more than eggs from ordinary market channels.

Evidently you are producing the very best table eggs and marketing them new laid direct to consumers. Such eggs ought to bring 5 cents a dozen above the highest quotations for best grade of market eggs. When you find them quoted at all you will generally find them under "extra fancy nearby hennery eggs" or some similar term. It would be a good plan for you to have some city retailer, who caters to the best trade, furnish you twice a week with the retail price of "fancy" new laid eggs. You can use this as a guide to fix your own prices. It takes time to build up a trade and it takes fine quality to create a preference for your goods. It is up to you to demonstrate the quality of your produce and to create a demand for it. Good salesmanship and nerve are necessary to make sales and get the price.

Market quotations appear arbitrary and are so to a considerable extent. It is claimed that it is necessary to have it so and that without some fixed standard for making prices, gambling or speculation would prevail to a greater extent than it now does and handling produce would become a greater "game of chance" than it is.

Every large city has its "Exchange," an association of men of high financial standing and good reputation in business, for the purpose of trading in eggs, poultry and other produce. This exchange meets daily and the members buy and sell large lots of these goods. The prices in these transactions are from time to time quoted on the bulletin board of the exchange. It is from this bulletin that the merchant or the reporter makes up his list of "market quotations." The dealers accept the prices prevailing at exchange sales as a guide in making their prices for the day. New York City, consuming the most eggs and being our biggest market, serves as a guide to regulate the prices of a very considerable portion of the country and the quotations of its exchange serve as a basis (transportation, etc., considered) for transactions in local exchanges. The exchange has certain definite rules for grading produce controlled by a committee. At the present time there is quite a wide variation in grading in different cities. The National Poultry, Butter and Eggs Association is working for a standard of national trade rules for governing the classification, grading and inspection of eggs and

poultry and to secure uniformity throughout the country.

In the general classification, eggs are either "fresh gathered," "storage packed" or "refrigerators."

As will be seen on referring to the sub-grades, "fresh gathered" is a pretty far-reaching term and does not indicate the age or degree of freshness from the poultryman's viewpoint but includes all the "fresh" eggs of commerce, or those which are marketed without going into storage. So long as they are clean, sound and reasonably full as to content they may have been kept some time before reaching the consumer. From the very fact of the necessary handling and trading they can't be "fresh" in the same sense that a new laid egg direct from the producer is "fresh." The term "storage packed" explains itself and applies to eggs put up in new cases especially for storage. "Refrigerator eggs" are storage packed eggs that have been or are in storage. Without going into all the grades of eggs we will briefly take up the sub-grades proposed for the "fresh gathered" sort.

"Fresh gathered extras" are required to contain the following percentages of clean, fresh, reasonably full, strong, sweet eggs:

Jan. 1 to Feb. 15, 80%—net weight 43 pounds and over.

Feb. 16 to May 15, 90%—net weight 44 pounds and over.

May 16 to Oct. 31, 80%—net weight 43 pounds and over.

Nov. 1 to Dec. 31, 70%—net weight 43 pounds and over.

The balance, other than the loss, may be defective in strength or fullness but must be sweet. There may be a total average loss of one dozen per case, and of this loss the bad eggs must not exceed one-half dozen.

The eggs must be packed in new standard cases of 30 dozen each. The weights are net per case. "Total loss" includes all rotten, broken (leaking), spots, broken yolked, hatched (blood veined) and sour eggs. "Partial loss" includes very small, very dirty, cracked (not leaking), badly heated, badly shrunken, salted or frozen eggs and counts as one-third loss in all grades except "thirds," "dirties" and "checks."

"Fresh gathered firsts" are required to contain the following percentages of clean, fresh, reasonably full, strong, sweet eggs:

Jan. 1 to Feb. 15, 70%—net weight 42 pounds and over.

Feb. 16 to May 15, 85%—net weight 43 pounds and over.

May 16 to Oct. 31, 70%—net weight 42 pounds and over.

Nov. 1 to Dec. 31, 60%—net weight 42 pounds and over.

Other than loss the balance may be defective in strength and fullness but must be sweet. The total average loss may not exceed two dozen per case and the dead loss must not exceed one dozen bad eggs per case.

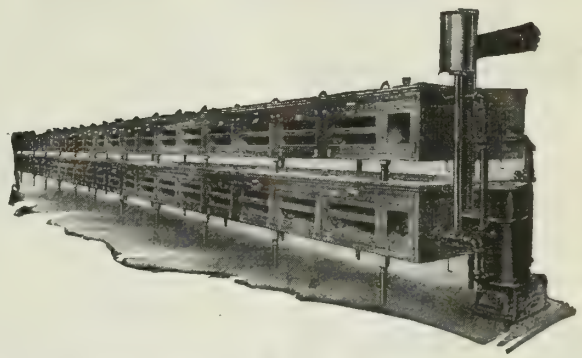
"Fresh gathered seconds" are required to contain the following percentages of reasonably clean, fresh, reasonably full, strong, sweet eggs:

Jan. 1 to Feb. 15, 65%.

Feb. 16 to May 15, 75%.

May 16 to Oct. 31, 50%.

Nov. 1 to Dec. 31, 50%.



Other than loss the balance may be defective in strength and fullness but must be sweet. There may be a total average loss of three dozen per case

Above All—The Henderson Strain

AMERICA'S FOREMOST Barred Plymouth Rocks

for EXHIBITION and UTILITY. I have hundreds of high quality youngsters growing for the season's shows. If you want winning cockerels and pullets write for descriptions and order early.

W. W. HENDERSON, BRIDGETON, ST. LOUIS CO., MISSOURI

"Easy to Operate. Five Minutes a Day All Attention Required. Hatched 85% of All Eggs. Strong Chicks That Lived."

These statements were made by a user of a Newtown Giant Incubator, Mr. Wm. Reinhardt, Jr., Port Jervis, N. Y.

The Newtown is naturally easy to operate because its heater and the temperature and moisture supply at each compartment are automatically regulated.

Coal is fed to the fire automatically from a magazine. All the eggs are turned by simply turning a handle at the end of the machine.

Newtown GIANT Incubator

600 to 24,000 Egg Capacity

It is not necessary to be continually running to the Incubator to see that the eggs are getting the right heat, because the Newtown Automatic Electric Alarm will give warning should an accident occur.

When the temperature gets too high in any one compartment, a powerful thermostat expands and raises a light metal damper disc in the top of the compartment, compelling the excess animal heat to pass out. With the Newtown, there is no lowering of trays or taking chances with hard-working, unreliable water valves.

The Newtown is the machine for the busy breeder who must give most of his time to the care of his birds.

The Newtown is the machine for the man who must attend to his hatching between times, because it requires so little attention and can be easily operated by the madam or the boy while the man is away.

Our building specialists are at your service if you intend constructing an Incubator cellar and poultry houses. Let's work together so that you will get the best at the lowest cost. Blue print plans and your copy of our Incubator catalog are waiting for you.

NEWTOWN GIANT INCUBATOR CORPORATION
21 Warsaw Street, Harrisonburg, Virginia

Endorsed by Thousands of Users

NEWTOWN Colony Brooder

Coal-burning, Self-regulating, Safest, Most Economical

Made in three sizes for up to 1500 chicks. Fill coal magazine once a day. Radiator distributes all the heat and saves much fuel. Costs only eight cents a day to operate. Gives chicks correct temperature all the time without attention.

Ask your dealer, or write today for Brooder catalog and proof that the Newtown will raise more and better chicks for you with no trouble and much less expense.

NEWTOWN GIANT INCUBATOR CORPORATION
21 Warsaw Street, Harrisonburg, Virginia

and of this the dead loss from bad eggs must not exceed one and one-half dozen per case.

"Fresh gathered thirds" consist of current receipts from the farmer, huckster or merchant and are required to contain the following percentages of reasonably full, fresh, sweet eggs:

Jan. 1 to May 15, 50%.

May 16 to Dec. 31, 40%.

Other than loss the balance may be defective in strength or fullness but must be sweet. Total loss from bad eggs must not exceed two and one-half dozen per case and the total average loss including loss from bad eggs must not exceed five dozen per case.

"Dirties" as the name indicates are dirty eggs. They must be of "useful quality," sweet flavored and must not have over one dozen spots or rots or more than one dozen checked or cracked eggs per case. "Checks" are eggs that are cracked but not leaking. "Rots" are rotten eggs. "Spots" are eggs that contain mould spots, rot spots from mould, yolk adhering to shell, or partly developed embryos.

The freshness of the egg is largely determined by the way the contents "stand up" and the fullness of the egg. If contents are badly shrunken and there is a big air cell, the egg is quite stale. A flabby yolk also indicates staleness.

"Candled and recrated" eggs have had the poor quality eggs tested out before the "candle" or tester and are supposed to contain only good quality eggs and are packed in new cases. "Nearby" is an elastic term applied to eggs from nearby sources and may mean anything or nothing in particular. "Nearby extras" are clean, good sized, presumably fresh eggs from nearby sources that are sold as received without candling. "Strictly fine fresh eggs" is a very general term and much abused in the application. Its meaning depends a good deal on the honesty of the dealer. "Nearby current receipts" applies to the receipts of the day from nearby sources. "Western" applies to produce from western shipping points; "do extra firsts" following immediately after the "Western" quotation would mean practically the same as if it was written "Western extras" (see description of sub-grades).

Dressed poultry is graded "No. 1" or "No. 2" according to quality. Sometimes the best grade, or something considered a little finer than "No. 1," is spoken of as "selected" or as "extras." "No 1" goods must be meaty, well dressed and clean. "No. 2" good may be pin feathery, poorly dressed, skin broken, slightly deformed, but free from culls. "Culls" are decidedly defective and undesirable goods.

"Fresh killed" applies to fowls and chickens that are marketed soon after killing, dressing and chilling; birds that have not been put into cold storage. "Dry picked" stock are birds from which the feathers have been removed immediately after killing without recourse to scalding to loosen the feathers. The experienced dry picker can stick the bird in such a manner that the feathers are loosened and easily removed without tearing or injury to the skin.

A "squab-broiler" is a chicken weighing 1¼ pounds or less.

A "small broiler" is a chicken weighing from 1¼ to 1¾ pounds.

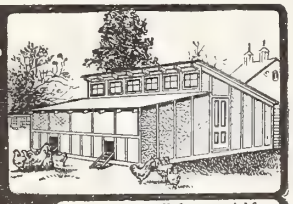
A "medium broiler" is a chicken weighing from 1¾ to 2⅛ pounds.

A "large broiler" is a chicken weighing from 2⅛ to 2⅝ pounds.

A "small fryer" is a chicken weighing from 2⅝ to 3⅛ pounds.

A "large fryer" is a chicken weighing from 3⅛ to 3⅝ pounds.

A "small roaster" is a chicken weighing from 3⅝ to 3⅞ pounds.



A "medium roaster" is a chicken weighing from 3⅞ to 5 pounds.

A "large roaster" is a chicken weighing from 5 to 6 pounds.

An "extra large roaster" is a chicken of 6 pounds or over.

The term "chicken" as used above

THE KLEIN-LAMBERT CO., 501 Traders Bldg., Chicago

applies to young birds. When described as "soft meated" it means that they are very young for size and have been quick grown and marketed before the flesh loses its tender chicken softness. "Soft roasters" or "winter chickens" are soft-meated, quick-grown, winter-grown chickens that have been brought to from 6 to 10 pounds weight in six to eight months. Males used for this purpose are caponized (castrated).

"Fowls" are adult hens, yearlings or older.

A "small fowl" will weigh 3 pounds or under.

A "medium fowl" will weigh from 3 to 4 pounds.

A "large fowl" will weigh from 4 to 5 pounds.

An "extra large fowl" will weigh 5 pounds and upwards.

"Stags" are young males in which the meat has become "hard" or "staggy," generally the result of running with the females, or from indifferent feeding, too much range and allowing the birds to "go by" best market age and condition. "Old roosters" are yearling and older cock birds. "Selection" is done by the merchant, presumably under the rules of the local exchange and subject to official inspection by an official selected by the trade organization for that purpose.

Trade rules are made to fit conditions as they actually exist in the handling of market produce. They deal with the run of produce as it comes to the market. The produce from the well-managed, sanitary poultry farm is exceptional produce and seldom gets into the ordinary market trading, going generally to the retailer or producer direct or from the commission merchant direct to retail dealer or large consumer. Much of this produce is sold or bargained for in advance. Where the producer does not deal direct with the retailer or consumer, he may sell direct to the jobber and so save for himself the collector's, wholesaler's and commission merchant's profits. The less handling of the product between producer and consumer the better for both.

A standard egg case holds 30 dozen, in two compartments of 15 dozen each. It is usually made of whitewood and of size and strength to conform with requirements for acceptance by the railroad at lowest freight rates. Such cases may be charged for or may be included free with the sale of the eggs. The eggs are held in place by strawboard "fillers" and "flats," with padding of cork or kiln dried excelsior (pine excelsior not allowed) on top and bottom. Sometimes cardboard cartons are used instead of fillers for "fancy" eggs, but only under special arrangements with the buyer.

Half cases are 15 dozen cases. Special size cases are often used in private trade for 3, 5, 10, 15 and 20 dozen lots. When dealing direct with regular trade "returnable" cases are often used. These are specially made strong cases, made for frequent shipments, bear the producer's or shipper's name and address and are returned to him when empty. Shipper has to stand the express or freight on produce to market and the nominal return charge on empty cases or boxes returned. There are many makes of egg cases. Thirty-six dozen cases or crates are sometimes used, but seldom. Baskets are commonly used for parcel post shipments,

eggs being packed in excelsior. Foreign shipments come in kegs, cases or crates of various types and are repacked in standard cases after arrival and inspection.

Feeding Chicks.

Q. (1) How long should chicks be fed on a board before starting to feed them in litter?

A. (1) Depends upon circumstances. Under favorable conditions they can be fed in litter from the start. When fed out of doors in wet weather we prefer to use feeding boards, or troughs, unless automatic feeders are used.

Q. (2) Should outside litter be used instead of feeding the chicks in growing grass?

A. (2) Outside litter not needed. If you feed in grass, see that they clean up the food, don't allow it to lie around and spoil.

Q. (3) Is there any danger of chicks acquiring an appetite for litter like bran or alfalfa to such an extent as to sicken themselves?

A. (3) Wouldn't use bran for litter. It is liable to spoil and become dangerous to chicks. Alfalfa litter is all right and there is no danger of their eating more than is good for them.

Q. (4) How old are Plymouth Rock chicks generally before they will jump over a two foot fence?

A. (4) Ours will go over two foot wire netting by the time they are three weeks old. They walk up and over. Seldom jump, and then not over. If they jump they go up to top wire, take a look around and then jump down.

Q. (5) Is it necessary for laying hens to have outdoor dry mash hoppers as well as indoor ones?

A. (5) It is not.

Q. (6) Will lime kill all dangerous germ life it comes in contact with?

A. (6) When properly applied we believe it will.

Elyria, Ohio. W. W.

Failed to Get Eggs From England.

Q. My brother in England bought me a sitting of eggs and they were forwarded by the man he bought them of "carriage paid" addressed to me. The shipment never arrived. I went to the receiving point here and they informed me that the eggs were all spoiled. Should they have been delivered no matter what the condition on arrival? The eggs being paid for, including carriage charges, should I not have been given the opportunity to see them? Can I put in a claim? Shall I value the eggs at just what they cost me, or at what they would be worth to me had they arrived safely? Am I obliged to tell just what they cost me? Are they valued before being shipped?

Springfield, Mass. A. E. A.

A. It is not quite clear to us who told you the eggs were spoiled. There is no duty on eggs from England. If the package was examined at the custom house and contents found to be spoiled, eggs could be condemned and the express company (or carrier) could not make delivery to you. If the spoiling of the eggs was due to negligence or carelessness on the part of the transportation company you might be able to recover for the actual value of the shipment. You have no claim against the customs department for condemning and destroying spoiled

E. B. Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Bargain Sale for 1914

Imperial "Ringlet" Exhibition Pen, winning First Prize and Sweepstakes Cup at Madison Square Garden, New York, 1913-1914, and Ckl. heading Second Prize Pen.

There are more First Prize Madison Square Garden, New York, winners here than on all other farms combined. You can now secure Madison Square Garden winners and sons, brothers, sisters and daughters of New York winners, and birds of this richest New York first prize winning blood at the decided bargain prices. Birds bought now at the prices in my Special Sale List will pay you splendid dividends.

In This Special Sale List

Are listed the finest show birds, the finest breeders in single birds, pairs, trios, and pens that I have ever offered and at the rarest bargain prices. There are lots to meet the needs of all—the beginner who must begin right, the old breeder who will improve his stock, and the show man who wants to win in the strongest competition in the world.

See ad on back cover page for the wonderful record of my Imperial "Ringlets" at last winter's Madison Square Garden 1913-1914 show. This achievement takes rank in history as the most wonderful ever recorded since the New York show was founded.

It Will Be To Your Interest to have this Special Sale List and take advantage of this opportunity to secure "Ringlets" at the cut down bargain prices. Whatever may be your wants in Barred Plymouth Rocks you will find it in my Special Sale List at Bargain Figures: The List will be mailed promptly upon request.

Elegant 70-page catalogue upon application.

EGGS from the world's finest exhibition matings $10 per setting; four settings $35; 100 eggs $60—One-half these prices after June 10th.

Poultry Diseases and Their Treatment
By F. A. Kaupp, M. D.

A book containing 185 pages, 5x8 inches in size and is profusely illustrated with original half-tone and pen and ink engravings. It shows the many parasites, germs, and bacteria that attack our poultry, as well as tells the names of the diseases, the cause or causes, the symptom and lastly the *treatment for each disease.* The book is printed on a high grade super calendared book paper, substantially bound in cloth, linen sewed to make it flat opening and the title is stamped in gold. Every poultryman should add this very useful book to his library. Remember that we prepay all charges on the book to your town.

eggs. Your only claim is against the transportation company (carrier) in case that the eggs spoiled through their fault. If the trip was made in usual time and spoiling was due to weather conditions, or to non-refrigeration, in case refrigeration was not paid for in carriage charges, you have no claim. In any case you can only recover what the eggs actually cost you and must make an honest statement of the cost. Value was probably asked when transportation company received the goods. If you can show that the shipment was subjected to unusual and unnecessary delay which resulted in spoiling, you can probably recover actual cost of the eggs. Transportation companies generally adjust such claims promptly when the claim is reasonable and honestly made.

White Comb.

Q. I have a fine White Rock whose comb and face on one side have turned white. It started several weeks ago and at first looked something like frosted comb. Can you tell me the trouble and a remedy?
Huntsville, Ala. F. G. C.

A. White comb, when accompanied by a powdery white scurf or scale on the surface is a parasitic disease. Other forms of white comb result from infection with various micro-organisms. Bathe the comb and face with a 2% solution of creolin. Dry, and apply an ointment made of one part finely powdered iodoform to 20 parts vaseline.

Duck With Wry Tail.

Q. Would you advise me to breed a White Indian Runner Duck that has a wry tail? I bought a $2.50 sitting and this was all I got.
Greenville, Pa. D. S. V.

A. We would not breed it. Take the matter up with the man you bought the eggs from. He should be willing to send you another sitting at half price.

Breeding Exhibition Brown Leghorns.

Q. (1) Is it wise to breed a cockerel, raised this year, to last year's hens?

A. (1) Yes, if the cockerel is fully matured, well-developed, sound and vigorous and the hens are equally sound and healthy.

Q. (2) Can I breed a last year's cock safely to this year's pullets?

A. (2) Yes, if the pullets are well matured and all the birds in the pen possess sound constitutional vigor.

Q. (3) How should I mate to produce exhibition Brown Leghorns?
Boone, Iowa. H. O. W.

A. (3) Successful breeder recommends the following matings:

To produce exhibition males: Male should have a good, rather small five point comb; white flat ear-lobes; long back; low tail; bird of good size and well up on legs; neck and saddle plumage deep, bright, rich red striped with black or greenish black centers; undercolor dark. Females should have rather small five point comb; clear white lobes; long back; large, strong, well-spread tail, carried low; good deep rich red in neck plumage running well down into cape and striped with good black centers; body dark brown with metallic black showing in rather coarse penciling.

To produce exhibition females: Male should be a good strong son of an exhibition hen; medium sized five point comb; good head; good white lobes; long back; low tail, well spread; neck color tending to an orange red striped with black or greenish black; wing rather darker than back with very little red on wing; saddle orange with black stripe; body should show female stippling. Females should have medium sized five point comb; good white lobes; long back; low tail, well spread; golden or orange neck with broad black striped centers; wings and back light brown finely stippled with darker brown; body light brown with darker stippling; breast salmon; fluff and thighs slate tinged with brown.

ASHOKAN WHITE ORPINGTON YARDS, Mr. and Mrs. P. A. Demgar, Props., BROWN STATION, N. Y.

Broken Cones and Crackers

Just the Feed Your Poultry Needs

The great secret of poultry feeding is "variety." It is the nature of fowls to search over a wide range for various foods, and where this is possible, poultrymen obtain the best results. In Broken Ice Cream Cones and crackers, poultrymen will find "just the thing" to make variety and add a pleasing taste to the fowls' food.

Third International Egg Laying Contest.

Contest report for July: The pen of English Leghorns owned by Tom Barron won the blue ribbon or first prize for the month with a yield of 250 eggs. Another pen of White Leghorns owned by P. G. Platt, Wallingford, Pa., won second place with 234 eggs to their credit. An Ohio pen of White Leghorns owned by Charles Heigl of Rocky River won third place with 228 eggs for the month. All ten of the leading pens for the month of July were White Leghorns. The most interesting development during the month was the fact that a pen of White Leghorns entered by the Storrs Experiment Station stood one egg ahead of the English Wyandottes at the close of the month; in other words, they were leading every pen in the contest. This particular pen has had no beef scrap or fish scrap since the contest opened, but instead they have had all the sour milk they could consume. Another interesting point in this connection is the fact that these experimental Leghorns were just five months old when the contest opened November last; they were hatched the last day of May.

The pen of English Leghorns moved from fifth place up to third during the month, passing the Connecticut pen of Wyandottes now in fourth place and the R. I. pen of Wyandottes now in fifth place. No individual hen has yet reached the 200 egg mark but during the first nine months of the contest an English Wyandotte has yielded 194 eggs, an experimental White Leghorn has produced 190 eggs and a Connecticut White Wyandotte has laid 188 eggs during this period. Some 30 individuals including Plymouth Rocks, Wyandottes, R. I. Reds and Leghorns have laid 165 eggs each or more, up to August first. Sixty-five individuals including Plymouth Rocks, Wyandottes, R. I. Reds, Leghorns, Orpingtons, Campines and "Hens," laid 25 eggs each or more during the month of July, and two of these hens, namely an English Wyandotte and a White Leghorn, owned by J. J. Linehan, Hingham, Mass., produced 29 eggs each during this period.

The ten best individual scores to date are as follows:

Pen.		Eggs.
14	English White Wyandotte	194
40	Experimental White Leghorn	190
16	Connecticut White Wyandotte	188
42	Experimental White Leghorn	184
42	Experimental White Leghorn	183
14	English White Wyandotte	181
40	Experimental White Leghorn	180
42	Experimental White Leghorn	177
53	Connecticut White Leghorn	177
53	Connecticut White Leghorn	176

It will be noted from the leading pens given below that the best average production attained to date is 163.7 eggs, made by the experimental pen alluded to above with the English Wyandottes a close second with 163.6. At this writing the race is exceedingly close and it looks as if anybody might win. Barron's Leghorns are about 100 eggs behind the best pen of American Leghorns. These, however, are only 21 eggs behind Barron's Wyandottes.

The ten leading pens to date are as follows:

Storrs Experiment Station, Pen 42*—White Leghorns	1,637
Tom Barron, Catforth, England—White Wyandottes	1,636
Francis F. Lincoln, Mt. Carmel, Conn.—White Leghorns	1,615
Tom Barron, Catforth, England—White Leghorns	1,511
Merrythought Farm, Columbia, Conn.—White Wyandottes	1,467
Neale Bros. Apponaug, R. I.—White Wyandottes	1,461
Cecil Guernsey, East Cobleskill, N. Y.—White Leghorns	1,378
A. B. Brundage, Danbury, Conn.—S. C. Rhode Island Reds	1,373
P. G. Platt, Wallingford, Pa.—White Leghorns	1,364
Storrs Experiment Station, Pen 41*—White Leghorns	1,348
Storrs Experiment Station, Pen 40*—White Leghorns	1,336
Branford Farm, Groton—White Leghorns	1,333
Bonnie Brook Poultry Farm, Saratoga, N. Y.—White Leghorns	1,318

Andrews' Products.

The Andrews Paper Box Co., Chattanooga, Tenn., are the manufacturers of exhibition shipping coops, which beyond a question are the most unique and cheapest coops ever put on the market. The show season will soon be in full swing and any of our readers in need of coops will do well to write for prices addressing this concern as above. They also make a salve which will exterminate lice and mites— the name of it is Andrews' Deathmite Salve. It has been used successfully for years at the Efficiency Strain Poultry Farm before this firm ever put it on the market. Andrews' Safety Egg Carriers are advertised on inside back cover of this issue. Look up their ad and write for further particulars.

The above cut is that of F. E. Harrison, Box 30, Menominee, Mich., originator and breeder of the Royal Red Strain of Rhode Island Reds. Mr. Harrison has been a breeder and exhibitor of Rhode Island Reds for the past twelve years. He has made Single Combs a specialty, and has today one of the very finest strains in America. He has for several years back sold a good many Rose Combs for the largest shows in the country, but has never advertised only the Single Combs. Mr. Harrison writes that he has now three thousand head of Single Combs, which are rapidly developing into the very finest specimens, and is in a position to furnish either young or old stock of the very highest type possible. He has already booked orders for Single Combs for the New York, Boston, Buffalo, St. Louis and Crystal Palace, London, shows, besides many other state shows and smaller exhibitions. Mr. Harrison is now busily engaged in preparing his new catalogue, which will be gotten out this winter and will undoubtedly be the finest Rhode Island Red catalogue ever offered. It will contain an exact reproduction in natural colors of a pair of Reds and the work and plates of this picture alone cost $1,000. These figures as to the cost of this plate are accurate, and anyone doubting it can address a letter to Mr. Grant M. Curtis, Buffalo, N. Y., who will substantiate this statement. This picture will appear in the December issue of the Reliable. We are informed on good authority that it is the finest work on Reds ever finished. The work was done by Mr. Franklane L. Sewell, and the copies of this picture will no doubt be in much demand by all Red breeders. Mr. Harrison has made arrangements with Artist Stahmer to make a trip to his farm in the near future and an early edition of this paper will contain photographs taken of the farm and birds, and will show one of the most modern and finest equipped poultry plants in America. The entire farm is devoted to the breeding of Reds, and the entire time of four men is taken up with the care and handling of them, besides Mr. Harrison's work of overseeing to the details and selecting all birds that are sent out. In order to properly house and care for the large amount of young stock Mr. Harrison is making a reduction in prices of breeders that will pay anyone interested in Reds to get their order in early. New fall sales sheet is now ready.

War and the Orpington Outlook.

The great European conflict is doing wonders for the expansion of America in every direction. People are learning that they do not have to seek abroad the good things, yes the best things. Among other things the value of the American Orpington is being recognized.

America this year will show that her Orpingtons are stronger than the imported birds. In former years many thought that England was the only place where the best was to be found, and large sums of money crossed the pond in search of the perfect bird. But war prohibits this. The trade this year will be home trade. Naturally the American strain that has won the majority of first prizes for many years, that has beaten the best that England has sent over, and proven its supremacy in the utility end, will appear in the limelight. That's the position Sunswick Poultry Farm is in.

They are prepared for this with as fine a lot of S. C. Buffs as ever existed and have on hand a wonderfully fine lot of early hatched cockerels and pullets, ready for the fall and winter shows. They're winners. The hatching season was not a good one and naturally the supply is limited. The wise man will place his order early and get the best. We wish to announce the important change in the managership of their plant. After Sept. 5th the place of Mr. Arnott will be filled by Mr. William Hobbs, who has to date managed the Joe Pye Orpington Farm. He is looked upon as one of the best S. C. Buff Orpington breeders in the United States and is unexcelled as a master breeder of exhibition birds. Sunswick prides itself in obtaining his services. Remember, you are able to buy the best S. C. Buffs in the world right at Sunswick Poultry Farm, South Plainfield, N. J., and they are ready, too, for the season's shows, at the most reasonable prices. Catalog sent immediately upon request.

A WARNING TO POULTRY RAISERS ABOUT LICE.

Dr. Hess Says Lice Cause Egg Shortage.

While the subject of egg production is now being prominently discussed all over the country, it would not be amiss to heed the warnings of Dr. Gilbert Hess on the louse question.

"It stands to reason," says Dr. Hess, "that hens cannot possibly do their best when they are pestered by lice. These parasites rob the hen of her vitality, and this, with the continual annoyance which they cause, is one of the chief reasons why a lot of poultry raisers are not getting the number of eggs they should."

The Doctor is right. We do not pay enough attention to the birds and their surroundings. Hens should be examined occasionally and dusted with some good reliable louse powder. We should also sprinkle the roosts, cracks and laying nests thoroughly.

We might mention right here that Dr. Hess himself is the compounder of one of the most reliable louse powders in the country—Dr. Hess' Instant Louse Killer.

This preparation is guaranteed by Dr. Hess to kill lice on poultry and farm stock, bugs on cucumber, squash and melon vines, cabbage worms, and slugs on rose bushes. It is sold in sifting-top cans. We advise readers to give the louse question serious attention and inquire from local dealers about Dr. Hess' Instant Louse Killer.

Have You Seen the Neponset Doll House?

We don't mean in the Saturday Evening Post or in the many trade papers—but set up on some living room floor, filled with doll furniture, and presided over by one or more little Miss Tuffats with girlish charm and girlish gossip? If you have, you know what a lot of playhouse this is for a two-dollar bill. We doubt very much if two dollars ever brought more joy to children's hearts than this splendid doll house.

Coming from New England, and the very heart of New England—Massachusetts—one could hardly expect its architecture to be anything but New England Colonial. From chimney cap to ground floor it is pure Colonial in style. Red Colonial chimney; the blinds green Colonial.

The playhouse is astonishingly well built with solid wood frame. The windows are translucent fabric. The house is open at the back so as to permit doll furniture to be easily moved about in all the rooms of both floors. Remember this is not a one-story bungalow—but a real house with upstairs as well as downstairs.

Why this doll house? It was conceived by Bird & Son of East Walpole, Massachusetts, as the best way to show how the famous line of Nepsonet Products actually looks. This could not adequately be done by samples. Hence the idea of a complete play house built with Neponset Products.

One who has seen this house can not help but carry a lasting eye-impression of the two newest Neponset Products—Wall Board and Floor Covering. The sides and roof are made of the former—while strips of the latter are laid on some of the floors. Even the roof is greyed slate color to represent Neponset shingles.

To see this doll house is to get a lasting impression of Neponset quality—that which more than any other one thing has made the Neponset industry grow from a tiny beginning in 1795, through four generations of the same family, to a capacity output of five large factories.

The "man about to build" who has seen this (2' 6"x1' 3"x1' 7") Neponset doll house certainly knows (not what he hopes to find but) what he actually will find in the entire standardized line of Neponset building Products: Paroid for low pitch roofs; shingles for a fire-resisting, ornamental roofing, red roof and proslate roofing; Neponset flashing; waterproof building papers, florian sound deadening felt for floor, wall board which takes the place of lath and plaster, floor covering and paints.

For a souvenir of a business and a giver of amusement we have never seen a happier combination than this. Has it "caught on?" Over 4,000 already delivered prove that the right combination of fun and salesmanship is still an efficient factor in merchandising.

Ferris Leghorns.

Geo. B. Ferris, of Grand Rapids, Mich., has just written us that he won as follows at North Dakota State Fair, Fargo, N. D., July 20 to 25, 1914: Cock, 1st and 3d; cockerel, 1st and 2d; hen, 1st and 3d; pullet, 1st, 2d and 3d. He is offering some excellent bargains in show and utility birds in his ad elsewhere in this issue. Write him your wants and mention A. P. J.

A. B. Porter, the Buff Orpington specialist at La Salle, Ill., says that the quality of his young stock this season is far ahead of any previous year. It will be remembered that he produced the champion male and first prize young pen at the last state show. His Golden Buffs will be exhibited again this year at the leading shows. He certainly has high grade Buffs and his prices are very reasonable.

One of the most useful and appropriate souvenirs given away at the recent annual convention of the American Poultry Association was a combination punch and cigar clipper. This very neat little souvenir was freely distributed by the Otis & Moe Manufacturing Co., of Chicago. Every poultryman needs a poultry punch and many of them a cigar cutter. This will now enable them to smoke while they punch. This article, however, is not to be retained by the Otis & Moe Manufacturing Co. as a souvenir, but this was only a means of introducing the novel and useful little device which they are now manufacturing for sale, as you will note by an advertisement elsewhere in this issue.

WHITE RUNNERS

Write me for prices. Fine lot of exhibition birds for sale at reasonable prices. Mention Am. Poultry Journal.

E. G. Curtis Atsion, N. J.

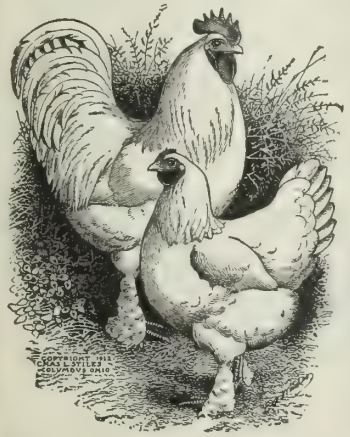
Summer Sale of Trap-Nested Layers

The Peabody Farms have in their Breeding Yards hundreds of birds that have high records as layers during the first six months of this year. We have thousands of early hatched chicks bred from them that are coming along in fine shape. We are now offering to the public our first Summer Sale. This will be an exceptional opportunity to secure **White Leghorns, Orpingtons, Rocks and Wyandottes** that are layers and have records behind them.

We are booking orders for cockerels. We will deliver the birds at your convenience. We will ship you all the birds you desire on approval.

Let us select your breeding **Drakes.** We have hundreds of **White Pekin Youngsters.** We are offering our old breeders at a great sacrifice.

We are now booking orders for Fall delivery of chicks.



We have **White Holland Turkeys, White Embden Geese, White Guineas and White King Pigeons. Mallard Ducks, Wild Geese, and Pheasants of all kinds.**

PEABODY FARMS, Hinsdale, Ill.

White Indian Runner Ducks for sale at bargain prices.

What Others Say About Prescription No. 4.

"Many of our hens laid right through the moult last year, thanks to your Prescription No. 4."—The Hartman Poultry Farm, Columbus, Ohio.

"No. 4 is sure all O. K. Don't want to be without it. Am getting eggs every day while others are getting none."—R. C. Smith, Fort Dade, Fla.

"No. 4 makes my hens lay."—Leo Eckert, Jasper, Ind.

"No. 4 seems to work wonders for me. What price on larger lots?"—W. H. Carpenter, Elgin, Ill.

"No. 4 satisfies me well. How much by the 100 pounds?"—Christ. J. Wigger, St. Meinard, Ind.

"It surely makes the hens lay. What price in 100-pound lots?"—D. H. Pores, Van Nuy, Cal.

"No. 4 is certainly a great thing."—Eugene L. Hills, Vice President, Missouri Wesleyan College, Cameron, Mo.

We believe that every poultry raiser should try No. 4 on the liberal terms of 1 pound for 25c or 5 pounds for $1 and your money back if it fails. Write the Nabob Remedy Co., Box A, Gambier, Ohio. They want agents everywhere.

Fresh Air Makes Chicks Strong.

"It isn't any wonder a lot of your chickens die and the rest are unhealthy when they breathe foul air over and over again—swelter in hot weather—suffer from drafts and excess moisture in winter," said a well-known poultryman to a farmer recently. "Why don't you give them fresh air just as you do yourself?"

That poultryman spoke the secret of successful poultry raising—fresh air. He made a point of immense value to owners of portable poultry houses and others in which ventilation is poorly provided for, and which, because of that one fact, have caused most of the poultry raisers' troubles. However, if there used to be any excuse for illy-ventilated poultry houses there is none now, for a German has invented a thoroughly scientific and practical ventilator for poultry houses, which is called the Essenbee Ventilator.

The price of the Essenbee is within reach of all poultry raisers. As a matter of fact, it will pay its cost many times over in the number of chicks it saves. It is made by the Essenbee Company, 2144 Rice St., Chicago, Ill., who will gladly furnish full details on request. See their advertisement in this issue.

Rabbit Culture and Standard.

Rabbit Culture and Standard, published by the Poultry Item, Sellersville, Pa., is just off the press. It is the most complete work on the subject ever prepared and is the last work of the late Dr. Roth finished by Chas. T. Cornman. Dr. Roth was considered the best authority on Hares, Rabbits and Pet Stock, either in this country or England, and for a number of years had charge of the Poultry Item's Belgian Hare Department. Unfortunately Dr. Roth passed away before the book was finished, which necessitated Mr. Cornman completing the work.

It is full of information from cover to cover that is worth dollars to breeders of Hares and Rabbits. It effectually covers the subject of Feeding, Breeding, Housing, Diseases and their Remedies, Selection of Breeders and Judging, and is the only book published giving the official standard of every variety. It will be the same to rabbit breeders that the American Standard of Perfection is to poultrymen. Every breeder needs one, and every breeder will eventually have one. The price of the book is only 50 cents with paper cover, $1.00 bound in cloth and $1.50 with flexible leather binding. We can furnish it promptly on receipt of price.

Parmenter Back at Old Stand.

We desire to call our readers' attention to the fact that Robt. D. Parmenter, breeder of high class S. C. White Leghorns, is again back on his old stand at Knoxville Ill., having resigned the position as manager of Flanders Leghorn Farm, of Orchard Lake, Mich. He is offering our readers some excellent bargains in show birds and utility stock—see his ad elsewhere in this issue. Mr. Parmenter, while manager for Flanders Leghorn Farm, won five firsts, $50 silver cup for best display, $10 gold special for best display, special for best shaped male, special for best colored male, Swiss gold watch for best exhibit and sweepstakes—all these prizes, won at Chicago Coliseum show, 1913. He is now prepared to furnish winners for leading shows—write him your wants mentioning American Poultry Journal.

S. C. Buff Leghorns.

Mr. F. S. Smith, of Hamilton, Ohio, has just advised us that he has over 5,000 S. C. Buff Leghorns this year, the finest he ever had. He is now ready to supply you with a single bird or pen for any show and guarantees entire satisfaction or money back. His birds have won in the hottest competition at leading shows. Write him your wants, mentioning American Poultry Journal. Catalog free for the asking.

Jonesboro, Ark., Aug. 3, 1914.

H. I. Co., Salem, Va.

Inclosed find money order for 1 dozen $1 size "Oculum."

I know the value in results I have obtained from "Oculum" and will only be too glad to recommend personally the use of "Oculum" to anybody and everybody who grows poultry. Paul E. Archer.

Red Sussex Farms, Marysville, Mich., report their young Red and Speckled Sussex are showing great quality, both in type and color. If this war puts a stop to their importing females to sell with their cockerels, they will be sold out before the show season is half over. This firm is in a position to give great quality in cockerels, which show the quality and breeding of their sires—the best Sussex that ever crossed the Atlantic. Place your orders now.

山の内

Yama Farms

OUR summer sale offerings include many of our New York State Fair winners, and the males heading the following pens of our 1914 matings. If you have not already received a copy of this mating list accurately describing these males we will send you one upon request.

The Poultry Silo

In the cold winter months when your hens need green feed and exercise what is more appropriate than having a Poultry Silo? Hens are more fond of silage than any other food. Give them good winter quarters, plenty of sunlight, keep grit in boxes, and silage twice a day and you will be surprised at the results.

The Poultry Silo is the coming thing as it solves the feed problem once for all. Keeps poultry all winter the same as on range in summer—the cheapest and best food possible. Saves time, labor and expense. Complete set of blue prints and full instructions for $1.50, also little booklet "Poultry Silage". Send all orders to The Poultry Silo, Box 35, New London, Mo.

visitors, from all sections of the country, attend this show during the week, it makes a most attractive proposition for the exhibitor who can land the "blues." Western breeders of high-class birds will find warm competition here. Premium list can be obtained about November 1 by addressing W. C. Schuman, manager, 400 So. Emerson Street, Denver, Colo.

Notice to Show Secretaries.

The American Buckeye Club offers the following specials at the season's shows. Shows desiring them placed please print the following notice in their premium lists and send a copy to the undersigned. The American Buckeye Club offers four special ribbons, one each for best colored male, best colored female, best shaped male, and best shaped female. The club also offers a silver cup for best pen provided there are two or more entries by different exhibitors. Competition open to members of the club. Dues are $1.00 a year and should be sent to A. H. Weisberg, secretary-treasurer, Nevada, Mo. The club catalogue will be sent to any address for four cents in stamps.

National White Wyandotte Club.

The National White Wyandotte Club is without question the largest poultry specialty club in the country. At our last annual meeting, held at Cedar Rapids, Iowa, where there was a large and enthusiastic attendance, the following officers were elected: President, L. J. Demberger, Stewartsville, Ind.; vice president, W. R. Graves, Roselle, Ill.; secretary-treasurer, A. J. Gies, Delmar, N. Y.; executive committee, A. J. Smith, Cedar Rapids, Ia.; F. B. Williams, Naugatuck, Conn.; E. E. Mack, Thomasville, Ga.; J. W. Andrews, Dighton, Mass.; J. S. Martin, Port Dover, Ontario.

The National White Wyandotte Club will offer a set of five handsome ribbons at every show in the United States and Canada desiring same, these ribbons to be competed for by club members only. Show secretaries should write at once for the ribbons. The club will also offer $100 special money to be competed for by club members at its next annual meeting, and will offer $50 at each of four different shows in different parts of the country. Handsome silver cups will also be offered in each state where there are ten or more members, and this means in practically all the states.

The 1914 Year Book is now ready to mail. The club is making very rapid strides and has members in forty-four states, in Canada and Cuba. The Year Book contains eighty-four pages, is printed on the best paper to show up the illustrations and the text, and has many items of interest that will prove helpful to every White Wyandotte breeder. The Year Book will be sent free to all White Wyandotte breeders who will apply to the secretary-treasurer for a copy of same. Membership in the National White Wyandotte Club costs but $1.00 a year, and breeders remitting this amount now will receive a paid-up membership to October 1, 1915. I will be glad to furnish further information or application blanks.

A. J. GIES,
Secretary-Treasurer.

Notice to Show Secretaries.

The Buff Minorca Club of America will offer at this exhibition a set of five handsome and valuable silk ribbons to be competed for by club members, one each on first cock, cockerel, hen, pullet and pen. To win these ribbons there must be competition in all classes, but not necessarily by club members. If you are not now a member you should send the $1.00 membership fee to the secretary at once. You can become a member any time before the entries close. W. P. Williams, Secretary-treasurer, 1102 W. 52d St., Los Angeles, Cal.

Light Brahma Specials.

The American Light Brahma Club offers its handsome silk ribbons as follows: One for best shaped male, one for best shaped female, one for best colored male and one for best colored female. These specials will be awarded only where the winning exhibitor is a member of the club. For example: If the best shaped male is not owned by an A. L. B. Club member then the ribbon will be withheld unless that owner joins the club through the local show secretary before the close of the show. Membership may also be obtained by sending $1.00 (paying all dues to October,

Bruce-Croft Farm
Lynbrook Long Island, New York

1915) to the assistant secretary, Harvey C. Wood, Bound Brook, N. J. The club feels that it is unfair to have a ribbon put up as best shaped or best colored male or female simply because the bird belongs to a club member, when perhaps in an adjoining coop there is a better bird which was only prevented from taking the ribbon because the owner was not a club member.

American Cornish Club.

Would respectfully call your attention to the fact that since 1910 there has not been such a bird listed in the Standard of Perfection issued by the American Poultry Association such as an "Indian Game" but that there are some birds listed in the Standard mentioned called Cornish, bred in three varieties, called Dark, White and White Laced Red.

The club offers at all shows in the United States and Canada listing us properly, five handsome silk ribbons for best cock, best hen, best cockerel, best pullet and best pen in each variety to members of the club in good standing. Membership is $1.00 per year, which also entitles members to year book, this year one of 114 pages. Provided you send a copy of your premium list to the office of the secretary-treasurer of the American Cornish Club, and notify him of the list of winners of first prizes in the Cornish classes at the close of your show.

JOHN W. WARD, JR.,
Secretary-Treasurer American Cornish Club, Pennington, N. J.

Columbian Wyandottes.

The National Columbian Wyandotte Club will issue its new catalogue on October 1, 1914. This issue will be larger, better and more valuable to Columbian Wyandotte breeders than ever before, containing as it will the list of the club's special winners of last season, good articles by members and many strong features new and interesting. We specially want the names of all those interested in Columbian Wyandottes which will be listed in this new club catalog. A payment of $2.00 now includes the initiation fee and extends your paid up membership to November 1, 1915.

Send for our prospectus of Catalog and membership card at once.

The club has inaugurated a new plan of awarding championships and first prize winners in all classes are entitled to points towards these championships proportionate to the strength of the competition and the number of Columbian Wyandottes exhibited. Club special ribbons are given at all shows as formerly. For further information regarding the details of awarding these championship medals and special prizes address Ralph Woodward, secretary-treasurer, Grafton, Mass.

American Barred Plymouth Rock Club.

The Annual Catalogue of the Club has just been mailed to all the members. Every breeder of Barred Rocks should have one of these, and those who are not members can send $1.00 to the secretary, Henry D. Riley, Strafford, Pa., which pays the initiation fee and first year's dues to the club, and will entitle them to the catalogue free. The Barred Rock Club membership is a list of who is who in the Barred Rock world and every breeder should join. Our handsome Club Ribbons are offered at every show requesting them, and also one of our beautiful cups at a show chosen by vote of the members in every state. These are open to members only. Join the club and boost the breed and make yourself known.

Henry D. Riley, Secretary.

A Lively Club.

One of the liveliest young clubs in all poultrydom is the American White Faverolle Club, organized March 25, 1914.

The club holds its first annual show at the Grand Central Palace in December, and with but a handful of members—you know these birds are now in this country—they have now specials offered as follows: Two silver cups, value $50; one humidor, value $20; one humidor, value, $10; one cash prize, value $10; one cash prize, value $5; one cash prize, value $3, and they are still coming. To say nothing of what Secretary Howell is going to do. Going some, isn't it? Well, when you see the White Faverolle alley at the Palace, you will know why. The poultry press is going to reap a harvest

"On to Buffalo"

Mr. Poultryman:

Have you stopped to consider the value of exhibiting at an early show?

Do you appreciate the value of showing at a National Exhibition?

Do you realize what it means to ship exhibits so that they will reach the show room quickly? The

Greater Buffalo Poultry Show

Thanksgiving Week, Nov. 23 to 28

gives you these and many other splendid opportunities, including valuable regular and special premiums, best judges, grand exhibition building, etc.

For information and premium list address

WM. C. DENNY, Secretary, Buffalo, N. Y.

from White Faverolle breeders in a few years. You keep your eyes on them.
—K. M. TURNER,
West Nyack, N. Y.

Interesting to Secretaries.

The E. C. Young Co., of Randolph, Mass., the well known poultry house manufacturers, are offering to any poultry association in New England, New York, Maryland, Pennsylvania or New Jersey one of their famous coops and runs for hen and chicks that sells for $2, to be given as a prize to any bird or class. The only expense to the association is that they pay the freight, not to exceed 50 cents, and place the coop in a conspicuous place, and the E. C. Young Co. reserve the right to put their advertising matter on the outfit. For further particulars address the company.

Silver Cup for Every Show.

In addition to the cups offered by the National Single Comb Buff Orpington Club for the national, branch and state meets for 1914-15, a plan has been evolved whereby every poultry show in the world may secure a cup for best display of Single Comb Buff Orpingtons. Also five beautiful ribbons, suspended from emblematic medallions. Whether your show coops 100 or 5,000 birds, write for full particulars. No show is too small to be included in this offer. For full particulars address M. S. Brady, Secretary, Richards, Mo.

Some Money for Reds.

A. G. Studier, editor of the Rhode Island Red Journal, of Waverly, Iowa, authorizes us to state that the Red breeders, through him, will offer $500 in cash prizes at the Coliseum show, December 11-16, 1914—$250 on Single Combs and $250 on Rose Combs. The prizes will be run down to eighth, and the eighth prize bird in a single class will win at least $4, or double the amount of entry fee, while the eighth prize pen in each variety will receive at least $10, or twice the amount of its entry fee. These big cash prizes are so arranged that the little fellow will have an equal show with the larger breeder. In addition to this the association will destribute their 55 big cash prizes through eight prizes, while the Red Breeders Club of the World will so arrange their specials to equalize the money from first to eighth. Take it all in all, the eighth prize bird in a single class will win about $8.00, while the eighth prize pen will win about $20.00. Besides, the Association offer their celebrated diamond scarf pin for the best display in each variety. This should, and undoubtedly will, bring out the greatest Red show ever caged in America. Premium list will be mailed November 1. See that your name is on the list. Drop a card at once to Theo. Howes, Secretary, Indianapolis, Ind.

Blue Andalusian Club to Meet at Chicago.

The Blue Andalusian fanciers, with one of the most wideawake, progressive clubs ever organized, will hold their annual meeting in Chicago at the Coliseum show, December 11-16, 1914. A fine list of cash and special prizes will be offered. L. C. Taylor, Gibsonburg, Ohio, will judge the class. Every Blue Andalusian breeder should get in line for this exhibition. The new illustrations in the 1915 Standard are bound to make this the most popular of the middle weight breeds. Now is the time to boost, and boost strong. Don't fail to send in your name at once for a copy of the premium list, which will be ready for mailing November 1st. Theo. Hewes, of Indianapolis, Ind., is the secretary. Come brothers, all boost together for the greatest Blue Andalusian show ever caged.

The American Buff Plymouth Rock Club will give as special prizes, four handsome silk ribbons: One for the best Rock shaped male, one for the best buff surface colored male, one for the best Rock shaped female, one for the best buff surface color female. Only members whose dues are paid to July 1, 1915, are eligible to compete for these specials. Membership fee is only $1.00 and this pays up to July 1, 1915. For information concerning the offering of state silver cups, or other matters concerning the Club, write W. S. Robison, secretary, Fayette, Missouri. Subscribe for the Buff Rock Quarterly, 25c per year. W. S. Robison, editor.

RAISE EVERY CHICK on "HEN-E-TA-HEN-O-LA" The *Phosphatic*-System!
The more phosphorus in the egg and the more phosphorus in the egg-shell, the greater the fertility, the better the hatch and the hardier the new-born chick.
The Hen-e-ta-Hen-o-la System eliminates all bowel-trouble; reduces mortality to a minimum; grows and develops the chicks faster and cheaper into strong, rugged, healthy "egg-producing" birds.
Ask your dealer or write us for new booklet, entitled: *"The Successful Way to Grow Little Chicks."*

FRED W. MORSE CO., Mfrs., Providence, R. I.

Big Prize Moneys for Market Eggs, Utility and Dressed Poultry.

The poultry department of the great Allentown Fair has the last three years maintained a splendid show of market eggs. This too in spite of the fact that eggs are usually not very plentiful at that season. To still further stimulate this feature additional classes have been added with increased prize moneys and the rules simplified. There is no entry fee of any sort and prize moneys in regular classes are $2.00 first and $1.00 second on dozens. On display and on cases the prize moneys are in proportion.

In the utility classes there will be prizes for best egg laying type in White Leghorns, Barred Rocks and White Wyandottes. Prizes for best record layers in laying competitions. Prizes for beef type in yellow and white skin and for dressed poultry. The prize moneys will be extremely liberal, $4.00 first, $2.00 second and no entry fee of any sort. Capons also will be featured and there will be classes for young and old capons. The judge in these classes will be Mr. T. F. McGrew, principal division of poultry husbandry, International Correspondence Schools, Scranton, Pa., and besides the regular cash prizes there will be third, fourth and fifth ribbons. All ribbons being special ribbons for respective departments.

Utility poultry seems to be on the boards at last and Allentown Fair show awake as usual is determined that this class of poultry is to have a good showing even though the season at its dates is not as favorable as might be.

For premium list write Harry B. Schall, general secretary Great Allentown Fair, Allentown, Pa. For information of any sort in the poultry department write W. Theo. Wittman, Allentown, Pa.

—o—

New Rule at Allentown Fair Poultry Show.

For sixty-two years the Great Allentown Fair had a rule that every exhibitor must buy an exhibitor's ticket. This ticket, in late years, was good for four 50 cent admissions and cost $1.00 Hence was much sought after by most people. Some exhibiting even merely so they might have a chance to buy such a ticket.

However, there were a few exhibitors, notable in the poultry and live stock departments, who did not or could not attend and who felt that to be compelled to live up to this rule was a hardship. Hence the association has voted to make the purchase of an exhibitor's ticket optional hereafter.

Prospective exhibitors in the poultry department should carefully note this and such as expect to attend should enclose the cost of an exhibitor's ticket at time of making entries as none can be sold thereafter and no passes of any sort, for any purpose, are to be issued by the secretary of the fair, thus guaranteeing that all are on an equal basis.

—o—

Williamsport, Pa., Show.

The premium list for the Williamsport Show, November 17 to 20, is now on the press, and will be ready for mailing about October 1. Never before has the management been so sanguine of success, as the officers of this grand poultry show are for their seventh annual event. Here will be the one big early show where the small and large exhibitors will meet on the same level, and awards be placed by America's and Canada's greatest judges. No show in the United States has a better record than the Williamsport show, and the management has spared no expense to make this show the equal of any metropolitan exhibition. As usual Williamsport has engaged the highest class judges as will be seen by the following list: Richard Oke, London, Canada, H. P. Schwab, Irondequoit, N. Y., Chas. Nixon, Washington, N. J., J. C. Punderford, Freneau, N. J., Henry D. Riley, Strafford, Pa., M. L. Chapman, Brown's Mills, N. J., J. D. Koons, Treichlers, Pa., and F. I. Bradford, Troy, Pa.

The following specialty clubs have selected Williamsport as the place of holding their 1914 state meets: Rhode Island Red Club of America, Red Breeders Club of the World, National White Wyandotte Club, National Partridge Wyandotte Club, American Barred Plymouth Rock Club, American White Plymouth Rock Club, American Buff Plymouth Houdan Club, American Silver Wyandotte Club, American Buckeye Club, Partridge Plymouth Rock Club of America, Ancona

AS A CIGAR CLIPPER

OTIS & MOE MANUFACTURING CO., 2011 OTIS BUILDING, CHICAGO, U. S. A.

Club of America, Rhode Island White Club of America, and the International R. C. White Minorca Club. Several other clubs are still voting, and Williamsport may also receive some of these clubs. All members of the above clubs as well as breeders of those varieties, should be sure to secure a premium list, as the offering of them will be exceptional. Address Geo. F. Hanks, sec., Williamsport, Pa.

Everybody Is Going.

The byword of the breeders in attendance at the Chicago convention of the American Poultry Association was, "I will meet you at the Coliseum Show, December 11-16, 1914." From East, West, North and South came the same report, "We are going and we are going to bring our best birds with us." With this understanding, now is the time to begin preparing your birds for this great exhibition. Remember the record of this show—five of the most successful exhibitions ever held in America; every dollar of its obligations paid in cash and on time. This year there are bigger and better cash and special prizes than were ever offered before; and, remember, as in the past, every premium is guaranteed. If you have not already registered for a premium list, do so at once. Send your name on a postal card to Theo. Hewes, Secretary, Indianapolis, Ind.

The Los Angeles Show.

The show dates for the next Los Angeles show will be January 6 to 12, 1915, inclusive. W. S. Russell, Ottumwa, Ia., will judge the Plymouth Rocks and Rhode Island Reds. C. G. Hinds, Oakdale, Cal., will judge the White Wyandottes, all Asiatics, Minorcas, Andalusians, Anconas, Campines, Lakenvelders and Cornish. Geo. W. Masterson, Duarte, Cal., will judge all the Wyandottes except White, all Leghorns, Spanish, Partridge Orpingtons, Hamburgs, Houdans, Games and Bantams. A. G. Goodacre, Compton, Cal., will judge all Orpingtons, except Partridge, all Dorkings, Red Caps, Buckeyes, Sussex, Polish, Buttercups, Turkeys and Water Fowl.

This will be the tenth annual exhibition of our association. The last three years the Los Angeles show has been the largest on the Pacific Coast, over 2,000 birds (not including pigeons) being exhibited each year during this period.

Silver cups and cash prizes costing $766 were distributed among the exhibitors at the 1914 Los Angeles show and the show was a great success in every way. We are now hard at work to make our 1915 show better than ever. Henry H. Mumford, Secretary-Treasurer.

The South's Leading Poultry Show.

The premium list of the Tri-State Poultry Show to be held at Memphis, Tenn., in connection with the Tri-State Fair, September 28 to October 3, is ready for distribution and contains many new and progressive features. This show pays the money offered, that is, the classes do not have to fill, if one exhibitor shows first money is paid. Another valuable feature is that the sales department will be in the hands of an expert salesman who knows the chickens and who has spent a life time selling and knows how. This service is free to all exhibitors whether they accompany their birds or not.

Hundreds of dollars offered in specials in addition to the regular prizes, at least sixty handsome silver cups, gold leg bands, beautiful medallion ribbons for grand champions, gilt bar pins, regular ribbons, daily lectures and stereopticon views by eminent professors showing the advance of the poultry industry and many other valuable attractions are awaiting you.

There are no better judges than those we have selected. For seven years we have paid the premiums before the close of the show and best of all you are exhibiting your birds in a section of the country where the demand for high class stock and eggs has always exceeded the supply. Send your name now to the Tri-State Poultry Association, Memphis Tenn.

Tennessee State Fair Poultry Show

The ninth annual exhibition of the Tennessee State Fair Poultry Show will be held at Nashville, September 21-26 1914. This is the south's greatest poultry exhibition, and is patronized by the leading breeders of America. Send today for premium list and entry blanks. John A Murkin, Secretary, Nashville, Tenn.

Great Silver Cup Poultry Show.

The second annual exhibition of Goshen Poultry Association will take place at Goshen, Ind., December 8-12, 1914. This will be the great Silver Cup Show of Indiana, the association fully expecting to give close to 100 cups this year. This will be placed on all varieties and competition will be open to the world. Be sure and send your name now for a copy of our premium list. Charles V. Keeler, of Winamac, Ind., has been engaged to place the awards. Everyone who know Mr. Keeler is sure that the awards will be placed just where they belong.

The following officers were elected for this season: President, Will H. Schadt; vice-president, Guy Lichtenwalter; secretary, A. A. Kryder; treasurer, C. A. Whittle; superintendent, H. F. Knight.

All efforts are now being put forth to get the premium list out promptly on time by October 1st, but you better send your name now so we can place it on file and it will insure you a copy promptly when it comes from the hands of our printer. Address Will H. Schadt, president, or A. A. Kryder, secretary, Goshen, Ind.

Fourth Annual Pittsburgh Exposition Show, Week of January 18 to 23.

With thirteen of America's most competent judges and with the largest and finest building in America for poultry shows and one of the finest cities in the world to sell thorough bred poultry you will make a mistake if you do not plan to show a nice string at one of America's greatest shows. Do not forget the date, January 18th to 23d. All express companies enter Pittsburgh and you can ship your birds from most any section with a very short ride. Most liberal cash premiums paid before the close of the show besides many specials. Entries close January 7. Be sure to send for premium list. Permanent address 303 Empire Building, Pittsburgh, Pa.

"On to Buffalo."

"On to the Greater Buffalo Poultry Show" will be the slogan of poultrymen the coming season. The splendid success of the last year's show and the standing of the men behind the show has established the Greater Buffalo Poultry Show as a national exhibition.

Prominent poultrymen attending the 1913 exhibition pronounced it "one of the season's best in the appearance and arrangement of exhibits, in the personnel of exhibitors and judges, in the quality of birds and as a sales exhibition." Percy A. Cook of Wm Cook & Sons of Scotch Plains, N. J., the noted Orpington expert who was an exhibitor at the 1913 show, writes: "Your 1913 exhibition was without a doubt the best show I attended during the past season. It would be impossible to find a better building for an exhibition than the Auditorium. It was also an excellent show for sales and our splendid winnings have brought us a great deal of business." This year's show dates are November 23 to 28 (Thanksgiving week). Information and premium list, which will be ready for mailing October 1, can be had by addressing Wm. C. Denny, secretary, Buffalo, N. Y.

The annual exhibition of the Lanark Poultry, Pet Stock and Grain Association will be held January 4 to 9, 1915. (Under A. P. A. rules.) Nothing will be spared to make this the greatest exhibition of poultry and grain ever held in this neck-of-the-woods. The members are all alive in the poultry world and exhibitors may rest assured that their interest will be well looked after. Begin now to make arrangements to meet with us and bring in a nice bunch of birds or grain or both. Our judges are up with the times and you will get your dues, so don't hesitate, but come to Lanark, Ill., January 4-9, 1915. Send your name for premium list to J. A. Shaner, secretary, Lanark, Ill.

Alabama State Fair and Exhibit Association Show will be held at Birmingham, Ala., October 1 to 9 inclusive. J. H. Drevenstedt, judge; Dr. Hal F. Halstead, superintendent.

T. F. Richardson, of Evanston, Ill., writes us as follows: "I will be prepared to furnish pullets, cockerels or show birds of better quality this year than ever before." He breeds White Rocks and White Wyandottes of high quality—the kind that win at leading shows. Write him your wants.

Caponizing Instruments.

An interesting example of commercial achievement based on "old fashioned" principles of fair dealing is found in the splendid success of G. P. Pilling & Son Company, of Philadelphia. For more than a century this widely known concern has consistently followed the same high ideals, serving one generation after another in the same satisfactory way as makers of surgical and veterinary instruments.

'Way back in 1814 the Pilling business made its start in a humble way—in an old-time bay-windowed shop. And the founders of the firm unquestionably kept in mind the precept of Benjamin Franklin: "Keep your shop and your shop will keep you."

No mushroom growth was this—to rise in a day and disappear as quickly. As the years passed each showed a substantial increase based on that most stable of all commercial assets—satisfied customers. And as a result the Pilling business grew from a tiny local shop to an establishment with an international reputation.

Today G. P. Pilling & Son Company are the largest makers of specialty surgical instruments in the world, and occupy a large modern five-story plant at the northeast corner of Twenty-third and Arch streets.

Of particular interest to the readers of this publication is the branch of the Pilling business devoted to the manufacture and distribution of caponizing instruments

MAKING CAPON FORCEPS.

—a line in which this firm stands pre-eminent. Pilling caponizing tools are primarily designed and built for service rather than merely to sell. The high quality standard that has been uniformly maintained has made caponizing instruments bearing the Pilling brand standard of reliability throughout the poultry world.

Made by skilled mechanics from latest and best designs of experienced caponizers they are easy and safe to use and certain to give long and satisfactory service. The latest improved machinery, together with a tremendous output, permits a scale of prices as low as is consistent with quality; while the big variety of sets offered enables the customer to select just what will meet his particular need.

The illustration shown herewith gives an interesting idea of the magnitude of the manufacturing operations at the Pilling factory.

Many of the Pilling instruments are thoroughly protected by patents, making it necessary to obtain them from this concern in order to secure the latest and best without infringement—the Pilling patents.

A most interesting free book on caponizing is published by them. Every up-to-date poultryman should send for a copy, and inform himself of the big increase in profits that caponizing makes possible.

———o———

The following is an excerpt of an editorial which appeared in the July 6th issue of the New York Evening World relative to the fact that wood shingles were responsible for the great fire loss at Salem, Mass.: "*Shingles to Blame.*—Massachusetts one thing which contributed most to the spread of the fire was—shingles. House after house burst into flame the instant the rain of sparks touched the tinder-like shingle roofs. A dry, weathered shingle makes about the finest kindling known. In a closely populated town a brisk wind carries flames over shingle roofs as fire sweeps over sunburnt prairie grass. The Bay State is using the Salem fire to start a strong argument against shingles. It will do the rest of the country no harm to listen." H. W. Johns-Manville Co., New York, make a splendid asbestos roofing which is guaranteed against fire. It never needs coating. Write for their illustrated catalog. It's free for the asking.

Hilldorfer Black Minorca Poultry Farm is quite an extensive poultry farm, consisting of 20 acres, finely situated in Saxonburg, Butler County, Pa. It is a fine level farm with the best of buildings and 1,500 of the finest birds in the country, getting in the finest condition for the coming winter shows. There are also some fine Rhode Island Reds, Indian Runner Ducks and Scotch Collie Dogs bred on this farm that would make your mouth water to look at Under the skillful management of George E. Norman, who has half-interest in the poultry farm, this farm has improved wonderfully the last two or three years. Anyone wanting to beat the birds on this farm is still bending a thoughtful brow over the ruins of Salem. Everybody agrees that the at the coming winter shows will have to wake up. They have been very successful in advertising in the American Poultry Journal, and cannot fill the demand for high-class stock which they receive.

Blue Bell Barred Rocks.

It is with great pleasure that we call our readers' attention to the fact that E. A. Webb, of Ewing, Ill., has moved his poultry plant from his former poultry yards to his farm of 120 acres at Benton, Ill. This gives him plenty of room and an abundance of shade, so much needed during the hot summer months. Mr. Webb's farm when fully equipped should be one of the best plants in the state. He has over 500 young birds on range now developing splendidly. Look up his ad in this issue. He has some excellent bargains for you in Barred Rocks.

———o———

We just have a letter from Sherman Bowden, the White Wyandotte specialist of Mansfield, Ohio, stating that he has a lot of cockerels and pullets that will be fully matured by Sept. 1st. He states that he can furnish winners at a reasonable price and, judging from his past show record and reports of his customers, there is no doubt as to quality. He also has a number of good show hens entirely moulted and in prime show condition for show after Sept. 1st. Write him your wants; it will be to your interest.

CLASSIFIED ADS

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and **five cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. **All copy for Classified Ads must reach us by the 17th of month preceding date of issue.**

LOWER THE COST OF LIVING. Buy Crystal White Orpingtons. Breeders and Young stock reasonable. Alfred Merten, Milwaukee, Wis. 7-9

BUFF ORPINGTONS.

FOR SIXTEEN YEARS my only business has been breeding Buff Orpingtons for eggs and show. The fact that my birds have always won, that several of the popular breeders have from time to time bought eggs and stock from my yards prove that my birds are "As good as the best and better than all the rest." Remember, my birds are all hen hatched and farm reared. Write your wants; try me, and you will not be disappointed; 800 grand, lusty cockerels and pullets fit to show now. Mrs. Karl Spear, Conewango, N. Y. 9

S. C. BUFF ORPINGTONS, Martz strain. Prices reasonable. Lida Martin, Ripley, O. 9-12

Don't Be Without It

BLUE WAVE BARRED ROCKS

The sensational winners at the Great St. Louis Coliseum Show, 1913, winning 1st and 2nd pullet, special for best shaped female, also second pullet mated ckl. In 1912 I won 1st cockerel, 2nd pullet and 2nd pullet mated pen at same show. They carry the size, shape, with wonderful deep, straight and narrow barring. I have a fine lot of show birds, fit to win any show. The price is reasonable; also fine breeders for sale cheap. Write me before you buy.

E. A. WEBB - BENTON, ILL.

HERE'S one thing about roofings you ought to know—a "slowly made" roofing is the only kind that is slow to wear out.

Every foot of NEPONSET Roofing is made, not on the how fast but on the "*how-good-can-it-be-made*" principle. This takes time. But it's the only way to *surely* make a roofing absolutely reliable and 100% weather and waterproof. You buy roofing for an investment. But a half-made, "hurry-up" roofing is the worst kind of an investment. You pay almost as much. What do you get? A quick-spoiling roof—a roof that's only half a roof—a roof that is a constant nuisance and source of expense. NEPONSET Roofing is slowly made—to give a service of years—not merely to sell.

Sold by dealers everywhere. Write for name of nearest dealer.

Surely Send for Roof Book—FREE

NEPONSET PAROID ROOFING

Other Neponset Roofings are—Neponset Shingles for residences; Neponset Proslate, the colored roofing.

BIRD & SON (Established 1795), 543 Neponset St., East Walpole, Mass.

American Poultry Association

The poultry industry of this country amounts in the aggregate to one billion dollars per annum. These figures paralize the imagination.

The American Poultry Association is the largest live stock organization in the world and its membership is increasing with tremendous rapidity. On its roll are the leading breeders and representative poultrymen of Canada and every state in the union.

Every breeder, fancier, man and woman in the United States and Canada who is interested in poultry of any kind should join this great organization.

The American Standard of Perfection

The Standard of Perfection is the official guide for the breeding, mating and judging of all poultry. It gives a close and detailed description of every breed and variety of chickens, ducks, geese and turkeys, with illustrations from living models. This book is published by the American Poultry Association at an enormous expense and is the American authority. You can not raise poultry successfully without this American Standard of Perfection. Prices postpaid from the publishers of this paper. Cloth binding, $2; leather binding, $2.50. Send all orders to American Poultry Journal, 542 So. Dearborn St., Chicago, Ill.

On its shoulders rest this gigantic Billion-Dollar Industry.

Your interests will be promoted and safeguarded. You may compete for the association diplomas and gold and silver medals at the shows, and be entitled to all the help that honest organized effort can give you.

You will have a voice in shaping the course and policy of the association. Making it recognized by nations and governments. Your name should be one of the thousands of the honored members of this association. We urge you to write immediately for information and application blank. Address

E. B. THOMPSON, President, Amenia, New York
S. T. CAMPBELL, Secretary

American Poultry Association, Mansfield, Ohio

E·B·Thompson's "Imperial Ringlet" Barred Plymouth Rocks

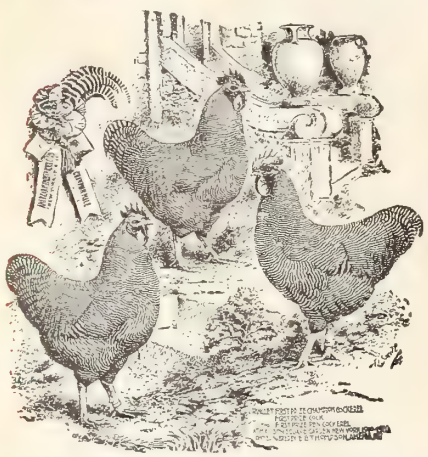
Eclipse all former achievements and win the most brilliant record of their time at Madison Square Garden, New York, this Winter of 1914, winning as follows:

ALL RIBBONS ON COCKERELS, namely, first, second, third, fourth and fifth prizes.

First and fourth on Cocks.

First, second and fourth on Exhibition Pens.

The Imperial prize of the show, Sweepstakes Special for Champion Male.



Medallion for Champion Cockerel.

Diploma presented by the American Poultry Association for Best Cockerel.

Spec'l for Best Shaped Male.

Spec'l for Best Colored Male.

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York.

Silver Cup for Best Plymouth Rock hatched in 1913, male or female, any variety.

Specials presented by the President of the American Barred Rock Club for Best Cockerel and Best Pullet.

Three Best Cockerels; Best Display; Best Collection.

Silver Cup presented by the New York Sun for best Cock, Hen, Cockerel, Pullet and Pen.

Sweepstakes Silver Cup for Best Exhibition Pen.

The Association $25 in Gold for Best Display.

All Silver Cups and Cash Specials.

Three times as many first Prizes as any Barred Rock Exhibitor.

More First, Regular and Special Prizes than any Exhibitor of any breed.

My exhibit was the most illustrious ever presented to the world —every winning feather was bred on my farm.

The amazing record of **1st, 2nd, 3rd, 4th and 5th prizes** on Cockerels—every Regular and Special Prize offered—stands unmatched in the history of Madison Square Garden. It is unequalled. These cockerels and hundreds of their brothers on my farm are beyond comparison—they are the Finest in the World.

If you want to win and breed winners you must have my Imperial "Ringlets."

They are the standard by which all other Barred Rocks are judged. The great twin records at Madison Sq. Garden, N. Y., 1913 and 1914—two years in succession—spell **Imperial "Ringlet" Supremacy.**

F. E. HARRISON'S
Aristocratic Royal Red
S. C. R. I. Reds

1st Old Chicago Pen 1913-14, Bred and Owned by F. E. Harrison, Menominee, Mich

were never better, when you stop to consider that in the show season of 1913-14 they were exhibited at four national shows under four different judges, and won twenty-two out of a possible twenty-three firsts, every championship, every color and shape special in the entire four shows. You can then judge the quality I must have to be "better than ever."

NOTE THIS: These twenty-two firsts were won in competition with one hundred thirty-six exhibitors, and not in county shows, but national exhibitions, they being the Chicago Coliseum show (not the local show), Indianapolis, Illinois State Fair and the State Fair of Upper Michigan. This is a record that has never been equalled, and we this year have birds of even better quality in both shape and color than ever before

I have the largest farm in America devoted exclusively to the breeding of Single Comb Rhode Island Reds. The three thousand head of specimens that I have this year cannot be equalled by any half-dozen Red breeders in the world.

I am prepared to furnish winners for any fairs or shows, birds that will have reached their maturity by the time these exhibitions are held, and the quality I have cannot be duplicated by any breeder.

REMEMBER: For twelve years past ROYAL REDS have won more prizes than all competitors put together.

ROYAL REDS have established themselves in all parts of the civilized world, and as they stand today they are champions over all other strains.

COCKS, COCKERELS, HENS and PULLETS, PENS and TRIOS, or in any quantity to suit the purchaser.

A large number of UTILITY SPECIMENS that are egg machines of the highest type.

Catalogue free for the asking.

Prairie State Portable Hovers

Thousands of incubator chicks die because they are not handled right after they are hatched. You must have an efficient brooder—one on which you can depend, and which will maintain a specified temperature. Prairie State Portable Hovers are designed to fill every requirement of those who have flocks of 50 to 100 chicks. The Hover is of galvanized steel throughout, easily portable; absolutely fireproof. Burns only one pint of oil in 24 hours. Ventilation positive. Automatic regulator. Thousands sold attest its value to poultrymen. Price of each, complete, $8.50. Write for full information and catalogue describing practical brooders that give satisfaction.

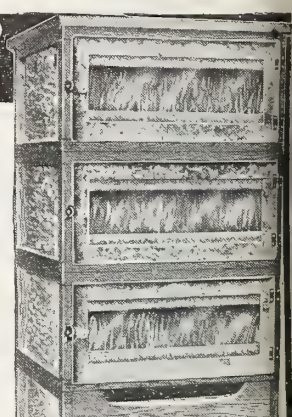
SOMETHING NEW!

A Grain Sprouter Made In Sections!



Doubles Your Egg Yield

Constructed of steel. *Double steel walls.* Made in capacities of from 70 to 600 hens. Fit the needs of both little and big poultry raiser. Grows as your needs grow. A brand new idea in grain sprouters. Positively fire proof. Completely safe in every detail. No wood to rot. Lasts practically forever.

"Successful" Sectional Grain Sprouter

will enable you to get three bushels *fresh, succulent, egg-making green food* from one bushel of oats, wheat or rye. It sprouts grain in 24 hours. Then gives an inch of crisp green sprouts every day. With it you can make your winter chicks grow faster—get them ready for market sooner—when prices are highest. You can make your hens lay more—*100% more eggs*—lay when egg prices are highest. It's a wonder! Can't warp, shrink or swell as wooden sprouters do. Has *large* glass doors and metal trays. It will make money for you. Send today for Free Book.

561 Third St., Des Moines, Ia.

ANGEL, THE RED MAN

SINGLE AND ROSE COMB

400 Early Hatched, Large, Vigorous Cockerels—Quality to burn. If you have some show in view and need a good cockerel, hen or pullet to complete your exhibit let me figure with you. I will tell you what I have and for the quality I can furnish my price will be very reasonable. State if you want Rose or Single Comb.

MY SPECIAL GUARANTEE PLAN

Write me fully the show you wish to make or the kind of a breeder you need; if possible how much money you care to invest and I will write you just what I have. If in need of a cockerel I can let you have one of those dark, rich, even surface colored birds with under color a delight to look upon. One with good red eyes and almost perfect type, with other requirements necessary to make a blue ribbon winner. If after securing the bird he is not satisfactory in every respect don't hesitate about returning him to me and I will either refund your money or send you another bird, express charges prepaid. Remember Angel, the Red Man, will make the transaction full of pleasure and profit for you. Write me today so we will have plenty of time to weigh things carefully before making the sale.

BEST by CONTINUOUS TEST

Is The Unbeatable Record of

Tecktonius-Reed Strains

R. C. S. C. Buff Leghorns S. C. Rhode Island Reds

An occasional winning fowl, or pen, is not unusual; many breeders produce them, but that don't make a WINNING STRAIN, any more than a "swallow makes a summer". Producing a strain of birds that **sweep the boards** in the big Nat'l Laying Contests and Exhibition Arenas—not ONCE, but YEAR AFTER YEAR—is the unbeatable achievement of **Tecktonius-Reed** "Buffs" and "Reds", in competition with all popular breeds—against America's foremost breeders. This unequalled breeding and exhibition record proves "Tecktonius-Reed's" **breeding methods** to be scientific, and and their strains of "Buffs" and "Reds" to be a dependable foundation upon which poultrymen can rear a brilliant poultry success. Hundreds are doing it today; why not you?

Note Our Attractive 1914 Offerings

Choice of three Varieties (R. C. and S. C. Buffs—S. C. Reds) with Each

Utility Stock	Exhibition Breeding Stock	Exhibition Show Stock	Special Pullet Offer
Good breeding Cockerels $3 and $5 per head. Good breeding Trios, or Pens, $10 and $15.	Hens or Pullets—$5, $8, $10, $15, $25 per head. Cockerels—$10, $15, $25, $50 per head.	Pens—high quality—$50, $75, $100.	Eleven April Hatch Pullets—excellent value—mated to a good, vigorous Cockerel $15.00

NEVER BEFORE HAS OUR OFFERING been of such high quality—never before was your chance for making a "a ten strike" in poultry raising as good as now. In National Laying Contests—1912—our Buff Leghorns led with high average of 249½ per pen—201 for individual hen.

"Tecktonius" Strain of "Buffs" carried of first exhibition honors for 8 years at Chicago, New York, Boston, Philadelphia, Baltimore, St. Louis, San Francisco, Kansas City, Indianapolis, Cincinnati, New Orleans, Memphis, Des Moines, and scores of lesser shows. Your success as a breeder—as an exhibitor—will be assured with a **Strain** backed by such an array of continuous triumphs. Send us your order today.

Tecktonius & Reed Buff and Red Farm

"A fine flock"—

Rudy's Perfection Strain

White Wyandottes

will delight the most fastidious lover of fine poultry. "A fine flock" is the involuntary comment. They have that pure white color, broad back, perfect head points and well spread tail so much desired in the beautiful White Wyandotte.

I will supply you with birds that cannot fail to please—the kind that will not be overlooked by any judge—birds that you will be proud to possess and that will win the ribbons for you if entered in competition.

Remember, my birds have the reputation of winning the most coveted prizes at the larger fairs and poultry shows.

Send for illustrated catalog and moderate prices.
Satisfaction guaranteed or money refunded.

GEO. H. RUDY, **Route 15,** **MATTOON, ILLINOIS**

$1335.50 IN PRIZES GIVEN AWAY

Twenty-six Grand Prizes

In order to secure more subscribers to American Poultry Journal and secure them quickly, we are making one of the most liberal offers it has ever been your good fortune to receive. READ IT THOROUGHLY.

Notice especially the enormous value of the first, second and third prizes. Did you ever have an opportunity to win such magnificent prizes? Everybody gets a cash commission on every subscription and all those who send in five or more subscriptions get a prize. See complete list of prizes below:

List of 26 Grand Prizes To Be Awarded To Those Sending In The Largest Number of Subscriptions.

The following grand prizes will be given to agents sending in the most subscriptions before midnight, January 15, 1915.
(Note—These prizes are given in addition to the cash commission and special prize for the first 5 subscriptions.)

PRIZES

1st, $500.00 Wing Piano
2d, $252.00 Candee Incubator
3d, $100.00 Cash
4th, Simplex Brooder Stove
5th, Brookfield Sectional Poultry House
6th, Keystone 100-Egg Incubator
7th-10th, 150-Ch. Simplex Feather Brooder
11th-15th, 100-Chick " " "
16th-20th, 50-Chick " " "
21st-25th, Full Bushel Faultless Feeder
26th, $10.00 Cash

This is just to make the end man or woman feel good. It may be won, perhaps, by sending in only 10 subscriptions, but the $10.00 goes to the 26th winner.

In case of a tie the value of the prize will be divided. All subscriptions mailed before midnight, January 15, 1915, and bearing postmark of that date will be counted in the contest. In this manner those living at a distance have an equal chance with those residing nearby. Prizes will be awarded January 20th and list of winners given in the February issue of American Poultry Journal.

Note the few counts necessary to win the big cash prizes in our last contest. The present prizes may be won with less. Why not by YOU?

AWARDS OF LAST PRIZE CONTEST

The prizes of the great American Poultry Journal $500 cash prize contest, which closed June 15, 1914, were awarded as follows:

	Counts	Prize
Thos. D. Gannaway, Washington, D. C.	213	$200 Cash
Macon A. Green, Columbia, Tenn.	144	$150 Cash
A. N. Blair, Carters Creek, Tenn.	129	$100 Cash
Chas. Bauer, Hempstead, N. Y.	127	$ 50 Cash

This big half-bushel "Faultless" Automatic Poultry Feeder

FREE TO EVERYBODY

Sending 5 subs. at agent's prices

Immediately upon receipt of your first FIVE subscriptions to apply on the contest, we will ship you a half-bu. size **FAULTLESS Poultry Feeder.** Remember, this is a special premium just to get you started on the way toward the larger Grand Prizes offered in the contest. Only one feeder will be given to any one agent.

Cash Commissions

In addition to this feeder the agent receives 25c cash commission on every one-year subscription and a cash commission of 50c on every three-year subscription taken at the special prices mentioned below. Show this to your friends. You save them money and are royally paid for your trouble.

The regular subscription price of American Poultry Journal is $1.00 per year, but during this contest we will allow agents to take subscriptions at a cut price of 75c per year, or THREE YEARS for $1.50, according to the following table:

AMERICAN POULTRY JOURNAL

Term of Subscription	Cut Rate	Send Us	You Keep	Counts in Contest
1 year	$0.75	$0.50	$0.25	ONE
3 years	1.50	1.00	.50	THREE

Big Three Offer—American Poultry Journal, Western Poultry Jour. & Am. Poultry Advocate

Term of Subscription	Cut Rate	Send Us	You Keep	Counts in Contest
1 year	$1.00	$0.75	$0.25	ONE

American Poultry Journal with Year Book

Term of Subscription	Cut Rate	Send Us	You Keep	Counts in Contest
1 year with paper bound Year Book	$1.00	$0.75	$0.25	ONE
3 years with cloth bound Year Book	$2.00	$1.50	$0.50	THREE

In order to secure agents' prices at least 2 subscriptions must be sent in. Address

CONTEST DEPT., American Poultry Journal Pub. Co., 542 So. Dearborn St., Chicago, Ill.

Gem Clover Cutter $9

Grain and Shell Mill, $5.00

Wilson Bros.
Dept. 201, Easton, Pa.

1st Pullet N. Dak. State Fair 1914

Big Profits this winter—eggs and poultry will be higher than ever before. Buy your laying and breeding stock now, for such stock will be high and scarce before spring. We raised nearly 10,000 birds this year but they are going fast because prices are reasonable and quality is excellent—However we still have several hundred pullets and hens and many cocks and cockerels for early buyers. Better write now while our stock is complete and we can supply exactly the type of bird you want.

Trapnested to lay 160 eggs or more a year. Every Ferris Leghorn is bred to lay—even our best exhibition birds must have records of 160 eggs before we breed from them. For 14 years our principal object has been to produce heavy layers. Today Ferris Leghorns are known the world over as egg machines, and they lay as well in winter as most breeds do in the spring.

Winners Last season's record of 35 first and 41 second prizes at 13 big shows proves conclusively that Ferris Leghorns have no superiors from an exhibition standpoint. This season they started out by winning every first and second at the recent North Dakota State Fair and the W. Michigan State Fair. Watch our winnings this fall and winter. For a complete list of last season's prizes see our free catalog. If you want winners for your show we have them—and the prices are right.

Prices —good utility stock—hens and early pullets $2.50 each; cocks and cockerels $5.00 each. Best laying-breeding stock $3.50 each for hens and pullets; $7.00 for cocks and cockerels. Good exhibition-breeding stock $5.00 for females, $10 for males. Exhibition stock $7.50 and up for choice hens and pullets, $15 and up for males. Pure, white, large, long bodied, with good head points, low, well carried tails and typical shape in all sections, these birds will win in any competition. Look at our catalog and see the prizes our customers are winning every year.

Guarantee Satisfaction or money back. Return birds at our expense if not satisfactory and money will be refunded. All stock insured for 30 days. We stand all the risk of change of climate and REPLACE FREE every bird that dies or gets out of condition. Before you buy, find out whether any other breeder will do this for you. Our success depends upon yours, and we do everything possible to help you succeed.

14 YEARS of careful breeding and square dealing are back of Ferris Leghorns. Better layers and better exhibition birds every year; this year's birds so good their quality will surprise you. Line-bred so many years, their good qualities are bred in the bone and make your success assured.

80 Page Catalog tells the whole story —it's free. Testimonials from every state; complete description of our plant and methods, how we developed laying and exhibition qualities, views of farm and stock, exact descriptions of the birds we sell at various prices, and all the information you will want to know before buying. If you need stock now, or eggs or chicks next spring, write us. We will be glad to quote prices and give all possible information.

Your Hens Must Pay This Winter

IN these times of high prices for all kinds of meat the poultry man simply must make his hens pay. All kinds of poultry feed are high in price and must be made to bring the maximum in returns. There is no one best poultry food. Many are good singly and in combination, but the *very best results* come from feeding *roots* and *vegetables* in combination with other foods Roots and vegetables are cheap and thereby reduce the feed bill while adding to its value.

Banner Root Cutters

prepare roots and vegetables of all kinds faster and better than it can be done in any other way. Send for free illustrated booklet and make the hens pay this winter. Address

O. E. Thompson & Son, Ypsilanti, Mich.

CANDEE COAL BILL

One Year's Saving in Fuel by Using a Candee Incubator

OIL BILL YEAR BEFORE

Based upon actual savings of E. E. Brown of East Moriches, N. Y.

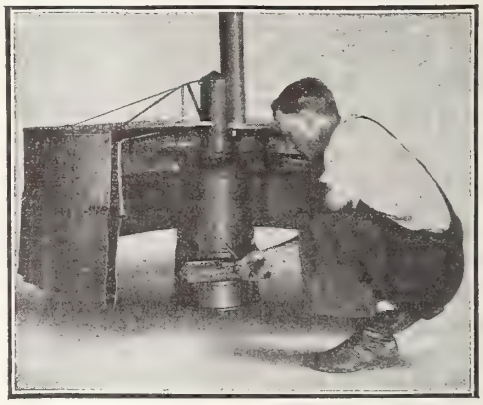
The saving in fuel alone justifies the use of a Candee in place of batteries of oil machines.

With a Candee you have thermostat heat regulation for each setting of eggs,—no raising or lowering of trays.

A coal burning, hot water heater takes the place of the oil lamps.

The Candee is a Money Maker

In custom hatching, the Candee pays for itself in a single season.



In day-old chick business, two hatches repay the purchase price.

A High school student earned $160 this season with a Candee 1200.

A blacksmith with baby chicks earned $300—$40 more than he paid for his Candee—and hatched a thousand chicks for himself.

There are hundreds of such instances. They indicate the profitable phases of poultry.

Investigate them, by writing today for our big free, 1915 Catalogue.

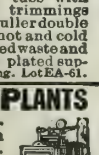
Building Material Prices S-M-A-S-H-E-D

NOW IS THE TIME TO BUILD OR IMPROVE

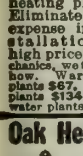
The Chicago House Wrecking Company now owned by the Harris Brothers Company decided that their best interests required more prominent use of the owners name. This Company has been favorably known to the public everywhere as "The Great Price Wreckers." The price smashing ability of this Company has earned for us an enviable reputation and justly earned title. "The world's greatest bargain center." During 22 years of successful business the four Harris Brothers have been the executive officers and owners. There is no change in our business except that the four Harris Brothers will advertise and sell their goods under our new name.

Harris Home No. 23

Never before in our entire history have we been so splendidly equipped to supply wonderful bargains. There isn't another firm on earth that occupies the unique position in the merchandise world that we do. The original methods which we pursue in securing our tremendous stocks of dependable material and merchandise and our enormous buying power represented by our $10,000,000 capital makes it possible for us to buy for spot cash entire stocks that are beyond the reach of ordinary buyers. We are determined to make the Fall of 1914 a memorable one with this Company especially in our departments of building material. These rare bargains speak for themselves.



Bathroom Supplies $13.00



White enameled cast iron one-piece roll rim bath tubs with nickel-plated trimmings and including fuller double bath cocks for hot and cold water. Connected waste and overflow nickel plated supply pipes. 5 foot long. Lot EA-61.

HEATING PLANTS

Save one-half on modern heating plants. Eliminate the expense in installation of high priced mechanics, we tell you how. Warm air plants $67, steam plants $134, hot water plants $154.

Oak Heaters $2.45

But one of the stove snaps in our bargain book. Best made kitchen ranges, base burners, hot blast and oak heaters in all styles and sizes. Lot EA-62.

$1098 BUYS MATERIAL TO BUILD THIS Model Farm Home

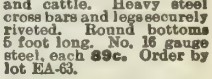
Without question the most convenient and practical design offered today. It represents the combined result of 22 years of expert planning, designing and close study of economy in material and construction. For years we have solicited suggestions from hundreds of our customers and country people everywhere. The best we have received is embodied in this design. Let us take you through it.

Basement under entire house; boiler room in rear. Boiler and coal room section and front section may be partitioned off tightly. Dust tight coal bin and root room. Outside cellar stair; large door easy to get in and out. First floor has 4 large rooms. The reception room and living rooms are separated by cased opening; giving an extra large social gathering room if desired. This also applies to the living room and dining rooms. Main stairway has a lead to kitchen permitting passage to second floor without going through living room. Kitchen is large and well arranged. Pantry will hold a wonderful lot of supplies. A large handy washroom is provided just back of kitchen. There is also a back porch between the pantry and washroom properly protected. On the second floor are 4 good-sized bedrooms each with its own closet. A linen closet is provided for and an airing porch which may be used for out-door sleeping purposes. Bathroom is conveniently located for economical plumbing.

THE MATERIAL The above price includes all first-class No. 1 dimension lumber. Beautiful glazed front door, Clear flooring, Clear Cedar shingles and siding; up-to-date hardware. Ready-cut door and window frames, inside door jambs, out door and window casings, balance in lengths to work without cutting or waste wherever possible, all glass in and back putties.

$10,000 PLAN BOOK FREE This beautiful book is free to prospective home builders. More than 100 modern Harris Homes, barns and other buildings clearly illustrated and described. Mail coupon today for your copy.

FREE PLANS Blue print plans, specifications, material list and guaranteed delivered price to your station on receipt of the coupon below and $1.00. If the plans do not suit, return them and 50c will be refunded. The regular price without coupon is $2.00. If changes are desired, we will make plans after your own ideas.



BUILDING MATERIAL BOOK FREE Every single item in building material to completely erect a building of any kind is shown in this book of economy. Lumber, doors, windows, millwork, paint, roofing, structural steel, etc., and everything at lowest prices.

Heed Our Cackle and Save $250.00

On the Purchase of Your Motor Car

Write us at once for particulars concerning the Crow Elk-Hart plan of selling that enables the buyer to save $250.00 by purchasing one of our new 1915 **Crow Elk-Hart** motor cars.

Our new 1915 Model E-45 Touring car is typical of the entire **Crow Elk-Hart** line.

It is also the most popular model with those desiring a **Five Passenger Touring Car** of dependable power, combined with the luxury and finish of the most expensive cars.

Our cackle has appeared in the American Poultry Journal for several months.

Now, we are cackling again because we have something to cackle about.

SIMPLE SILENT

"MADE TO MAKE GOOD"

SPEEDY SAFE

The E-45 is equipped with a **silent, smooth running motor** of 35 H. P. This classy **Crow Elk-Hart** has the power to meet all conditions that the efficient car is supposed to meet. We stand back of this car with our seven years reputation as **reliable manufacturers** and our strong **two year guarantee** accompanies the sale of every car. **Do you know of another automobile manufacturer as liberal in his guarantee?**

The new stream-line effect, carried out so nicely in the 1915 models, marks the **Crow Elk-Hart** one of the most attractive American cars from point of appearance.

The mechanical construction is in keeping with the outward appearance. Material going into each Crow Elk-Hart is the best that can be procured.

To attest this fact, we reproduce below an extract from the letter of

J. H. McDonough, Chief Machinist, U. S. Navy Yard
Washington, D. C.

"Have just finished going through one of your cars, which had been driven over two years and had the hardest usage. Our adjustment of crank and other bearings was so slight that it is hardly worth mentioning. In many years around machinery, have never seen parts wear so well as those of your machine. May I have the agency here?"

Special Dealer's proposition will be forwarded upon written request. Act promptly!

Crow Motor Car Company, Elkhart, Indiana

Greatest Subscription Offer Ever Made

All Three for $1.00

The Three Best Poultry Papers for the Price of One

American Poultry Journal, the one great poultry paper of America, is now in its 45th volume. Contains as high as 252 pages per issue. The eight-page colored supplements and colored covers each month are alone worth the subscription price.

American Poultry Advocate, published at Syracuse, New York, one of the widest quoted publications in the field, is always readable and instructive, and is conceded to be one of the best papers of its kind in the East.

Western Poultry Journal is one of the oldest poultry papers in America. Published at Cedar Rapids, Iowa, it has long been recognized as one of the most up-to-date and progressive papers, appealing alike to professional and amateur.

These three papers of the East, West and Middle-West cover the country thoroughly and no matter where you live you will find your peculiar problems treated with familiarity.

American Poultry Journal.....Price $1.00

Get Your Grain Sprouter
From the Man Who Knows How to Build
Profit-Making Poultry Outfits

J. W. MILLER
Inventor and Manufacturer of Advanced Types of Incubators, Brooders, Grain Sprouters

The demand for Grain Sprouters has brought many on the market built by men who know nothing about the poultry business and who lack experience in manufacturing articles to meet the demand of poultry raisers.

It takes months of experimental work and weeks of tests under all conditions to be able to know how to turn out a good sprouter. Our machine is built along these lines. We spent thousands of dollars perfecting the IDEAL. Now, the IDEAL has reached the highest point in efficiency tests. Over 20 are in use in my Millhook Poultry Farm, hundreds on other large chicken farms, thousands scattered throughout the country—all turning out the juiciest, tender greens ever sprouted.

If you want feed like that—feed that will **increase egg yield 50%, make chicks mature earlier, bring more fertile eggs, and keep fowl in condition**—get the

IDEAL Grain Sprouter

It is made of the best lumber outside and finished like a piece of furniture. All metal inside, rustless and durable. Constructed on scientific principles—like our incubators—with efficient heating and ventilating systems. Equipped with famous **Ideal Safety Lamp.** Uses less oil. Easy to operate and take care of. Produces an average of 3 bu. of sprouts from 1 bu. of grain. No waste, no bad lots, with the IDEAL. Guaranteed in every way.

Get Special Low Price Offer Today

Make Your Hens Lay

Write today for our free poultry books and learn at once what it might take you, alone, years of costly experience to find out. You know how eager fowls are for bugs and worms. Our book tells why. Briefly, it's the animal food they want, and **must have,** in order to thrive best. Chicks, laying hens, cocks, all need it—to develop frame, muscle, feathers, to produce many eggs, to produce fertile eggs. To replace bugs and worms in winter, or, for yarded fowls, feed freshly cut raw bone, prepared with

MANN'S LATEST MODEL BONE CUTTER

Try One Free—No Money Down

This feed is four times richer in protein (the egg-making, body-building element), than corn is, and it is more easily digested and assimilated. **Save** money by cutting down your grain ration. **Make** money by getting more eggs when eggs are worth most and by having better eggs for hatching stronger chicks, earlier and heavier broilers.

Mann's Latest Model Bone Cutter cuts the bone (and all adhering meat and gristle) into a fine, soft mash that fowls of all ages relish and can put to immediate use in producing profit for you. It turns easily, cuts rapidly, never clogs, wastes nothing. We sell it on **10 Days' Free Trial,** without money or deposit in advance—so you may be sure it is right. We even pay its freight back if you are not satisfied.

WRITE FOR FREE BOOKS TODAY. To read them is to know how to feed poultry for most profit.

Valuable Book on Brooding Given Free to Poultrymen

It is a complete, concise guide-book to successful artificial brooding. Describes in the clearest manner exactly what to do to make your chicks grow big and husky; to preserve their vitality and prevent loss. Written by one of America's foremost authorities on the subject. You need

The Handbook of Brooding

if you raise chickens. Write today for a copy, which we will give you with our compliments. Study it during your spare time. Post yourself upon the best methods of chick management so you will be ready to make next season most profitable.

We will also gladly supply you with facts regarding a new brooding system which has been declared by experts to be the best yet devised. Investigate before planning your 1915 brooding equipment. It may mean the difference between profit and loss!

Feed Hens Sprouted Oats for Fall Egg Baskets

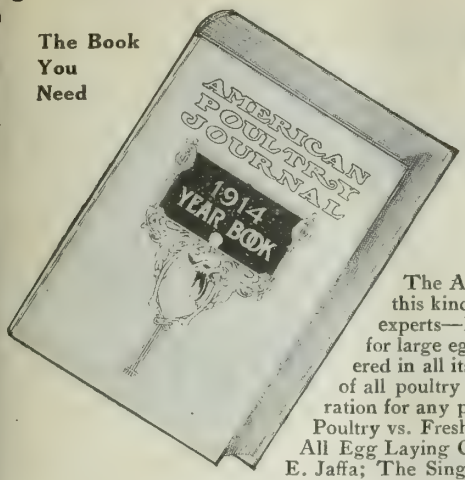
What are you doing to get some of this big money? What are you doing to get **extra eggs?** Have you got a Grain Sprouter? A sprouter is as much a part of the equipment of a successful poultry farm as healthy fowl. Simply because it produces the kind of green feed that

—Increases Egg Production 50%;
—Makes Some Hens Lay Double Quantity;
—Helps Pullets Lay Before Winter;
—Fattens Them and Cuts Feed Bill in Half.

Every extra egg counts. 100 hens should bring you $5.00 extra weekly if the feed is right. For this purpose, nothing equals the

Reliance Grain Sprouter

It makes 3 to 4 bu. of the **snappiest, juiciest and most tender sprouts** imaginable—all from 1 bu. of dry grain. This kind of feed is a **natural tonic and regulator**—keeps birds in perfect condition, too, besides making them profitable.



Our No. 2 Reliance Sprouter, Guaranteed Capacity large enough for 100 hens. **Other sizes, $5.00, $8.50 and $11.50.** Order direct or send for literature, pictures and prices of our entire line. **$7.00**

This is the original **double sprouter** made by one of the **largest and best incubator factories in the world.** It has **better heating and ventilating system,** thus insuring sprouts free from mold. Besides, the front of the Reliance **contains more glass** which induces larger quantity of sprouts.

All shipments made on guarantee of satisfaction or money back. Sprouter comes complete, ready to run. **No extras to buy. Send Postal for Literature — or order direct from ad.**

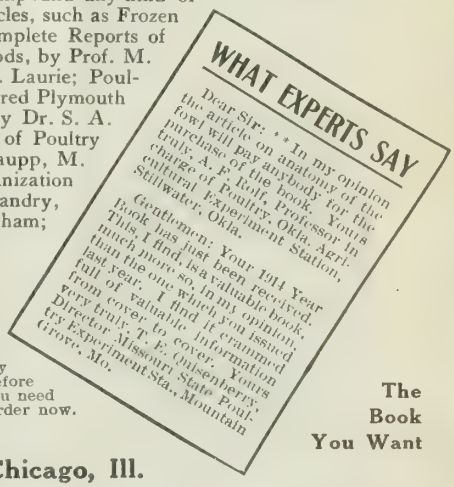
The Book You Need



Poultry Almanac

For 1914

The Only One of Its Kind in America

BIGGER, BETTER THAN EVER

The AMERICAN POULTRY YEAR BOOK for 1914 is undoubtedly the best work of this kind ever published. It contains the latest feeding formulas by the world's greatest experts—how to feed the baby chicks, the youngsters, the breeding stock, the winter layers for large egg production—in fact the important subject of feeding poultry is thoroughly covered in all its branches, with five pages of tables, showing the composition and digestibility of all poultry foods, showing how to properly compound any kind of ration for any purpose. Many other valuable articles, such as Frozen Poultry vs. Fresh Killed, by Helen T. Woods; Complete Reports of All Egg Laying Contests; Poultry Feeding and Foods, by Prof. M. E. Jaffa; The Single Testing System, by Prof. D. F. Laurie; Poultryman's Encyclopedia; Judge and Show Directory; Barred Plymouth Rocks, by H. P. Schwab; Poultry Journal Directory; Anatomy of the Fowl, by Dr. S. A. McWilliams; Poultryman's Calendar, by Clarence Ward; Remarkable Growth of Poultry Industry, by J. F. The Book You Want

BUT THIS IS NOT ALL

There are many varieties of birds shown in their natural colors, fine enough for framing. Also numerous black and white illustrations. Remember, the best poultry writers in the country were engaged to contribute articles for this great book, and no time or expense was spared in making this edition the finest book on poultry ever published. It is worth $5.00 to anyone interested in poultry, and if you could not secure another, you would not part with it at any price. Many thousand copies of the 1913 Year Book were sold last season, and the edition was exhausted long before the demand let up and many hundreds of our readers were disappointed. It is the one book you need and you cannot afford to omit it from your library. Don't get left this season. Place your order now.

PRICES: Prepaid, Cloth Bound, $1. Paper Bound, 50c.

American Poultry Journal - 542 S. Dearborn St., Chicago, Ill.

PITTSFIELD Pure Bred Money Making Cockerels and Pullets

Barred Rock White Rock S. C. W. Leghorn R. I. Red

25% Below Regular Prices if You Buy NOW

We hatched 300,000 chicks this year. So high did they average that we have 8000 too many even after the most rigid culling. **Till November 1st only** you can buy our Barred Rock, White Rock, R. I. Red, and S. C. White Leghorn Cockerels at

$7.50	for our regular	$10.00	Superlative	Cockerel	
5.62	" " "	7.50	Excellent	"	
3.75	" " "	5.00	Standard	"	

All are utility stock of the highest type, sons of heavy layers and bred in the original Pittsfield way to produce profit payers. Some are semi-show birds—all are pedigreed and toe-marked. We can mate them to unrelated females. They are wonderfully good birds at wonderfully low prices—but you **must order now** to get this bargain. Prices positively go up November 1st.

Day-Old Chicks. Order now for delivery next spring. Prices, all breeds, $5 for 25, $10 for 50, $18 for 100. Notice the lower prices on small lots.

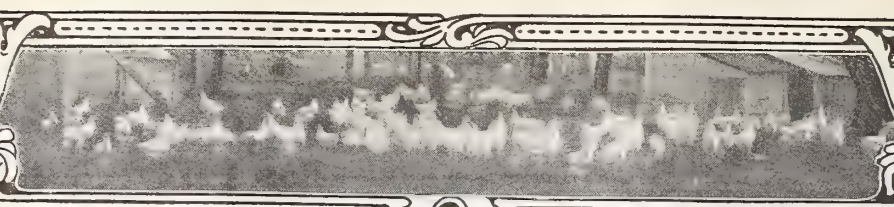
Four- to Eight-Weeks' Old Chicks. February 1st to July 1st, 4 weeks: $15 for 25, $25 for 50, $50 for 100. 8 weeks: cockerels, $1; pullets, $1.50.

For the same reason we are sacrificing prices on cockerels, we offer 1500 S. C. White Leghorn pullets. They are selected from 3300 pedigreed birds—the big egg strain from which we will supply day-old chicks next spring. You gain a year by ordering now. Nobody ever offered such Leghorn values as these. $3, $4 and $5 pullets for $2.25, $3 and $3.75 each. **Special offer** of 15 Excellent pullets and a Superlative cockerel for $50 net; or 15 Standard pullets and an Excellent cockerel for $35 net; or 15 Superlative pullets and a Superlative cockerel for $60 net.

Besides these price reductions we must sell 1,000 hens that we would ordinarily keep another year for our own breeding. Start or renew your breeding pen while prices are so low. Barred and White Rock hens $2.50, $3 and $4 each. 12 hens of either strain mated to a cockerel for $33, $41 or $55.

Sure-to-Win Show Birds

While Pittsfield is strictly a utility strain we raise splendid exhibition birds. This year they are better than ever. The prices are moderate—but you must write early to get the choicest.



The European War and the poor hatches of 1914 mean higher prices for poultry and bigger profits for you. Order early and order plenty.

Write for our book, "Money Making Poultry."

Every Pittsfield bird is sold on approval, to be returned and money refunded if not satisfactory

FIRST PRIZE WHITE ORPINGTON COCKEREL
MADISON SQUARE GARDEN, N.Y. DEC. 1913
BRED and OWNED by
ALDRICH POULTRY FARM, Columbus, O.

These are the most remarkable wins ever made at America's greatest shows, and our records of 157 prizes in the best shows for the past three seasons, and the fact that the most prizes at all America's best shows went to those who raise **Aldrich Strain White Orpingtons,** proves the **superiority** of this strain over all others.

Your success as a poultry breeder depends largely upon securing foundation stock or eggs from the best strain of the **best and most popular variety of poultry—the S. C. White Orpingtons.** They are the **greatest winter layers,** mature quickly, making broiler size in eight weeks, and add to these useful qualities their **hardiness, beauty and gentleness,** and you have the **ideal chicken,** and those breeding **Aldrich strain** have **no trouble to sell** all the stock and eggs they can produce **at good prices,** as the **superiority** of the **Aldrich strain** is now acknowledged by all.

We are the largest farm in the world today, making a specialty of White Orpingtons, and today specialists lead the world in every profession and business. The **Aldrich strain** has been **perfected by several years of hard work,** concentration and experience devoted to this **one variety.** For several years we have devoted all our time and attention to a single object—the perfection of the **Aldrich Strain S. C. White Orpingtons.**

Our Birds Are BRED TO LAY with the Same Care They Are BRED TO WIN

Our young birds this year are much superior to those of last season, and we have out more early stock that will be up to weight for the early fall fairs, but on account of the big demand which we expect this season, we would advise you to **book your order at the earliest possible moment** to avoid disappointment and get the best possible selection, as we only sell to one customer in each class at a show. We condition all birds free of charge, and will send them to you in faultless form.

Practical Poultry Lecture 30 Years Old

What A. C. Hawkins Said About Utility Poultry in 1884, When He Had Been in the Business About Eight Years

HISTORY is always interesting, but it is probable that A. C. Hawkins, recognized prominent fancier of today, did not realize that he was making history when he addressed the Berkshire County, Massachusetts, farmers on the subject of "Poultry and Eggs" thirty years ago. His record goes far to prove the contention of those who argue that a utility poultryman is the right foundation on which to build the successful fancier.

Mr. Hawkins was born in Somerville, Mass., and since he was four years old has lived on the farm in Lancaster where he now resides. He is about 58 years old and has been in the poultry business for fully 38 years. He began with market poultry and made a success of it, working up a good business furnishing chickens and eggs to the city market. From the very first he began to take an interest in and to work into the breeding of thoroughbred poultry. For several years he was an exhibitor and winner at small shows and in 1883 he made his first large exhibit at New York and made a big winning in hot competition. He has been winning his share of honors with his varieties ever since. He continues to conduct a good sized poultry plant, raising something over two thousand head annually and "farms out" as many more.

We find Mr. Hawkins' thirty year old lecture in the report of the Massachusetts Secretary of Agriculture for 1884 and read it with so much interest that we decided to reproduce it entire for the benefit of American Poultry Journal readers, who will find this advice, though 30 years old, has lost very little of its practical value. Its publication will probably be a surprise to the author. The lecture of 1884 follows: (Editor of A. P. J.)

POULTRY AND EGGS.

BY A. C. HAWKINS, LANCASTER, MASS.

It is with much pleasure that I meet the farmers of Berkshire to discuss a subject that is of great importance to us all; a subject the magnitude of which can hardly be accepted by many of you who have not had experience in it. Although I shall make some remarks in regard to keeping poultry as an entire business, I will call your attention more particularly to the subject of

Poultry and Eggs as Farm Products.

There are many farms in almost any section of the State, the soil and general conditions of which are adapted to the production of poultry and eggs. Carefully managed, this may be a source of much profit to the farmer; and if he or his family have an aptitude for the business, there is no reason why it may not be made very profitable. He will complain from one end of the year to the other that he is selling his milk at a less price than it costs to produce it, that there is no money in raising pork at the prices received; he is complaining now that he has raised thousands of cabbages this season that he had to feed to his cattle, as there was no market for them, and that what were sold had cost him more than he had realized for them. Let some of these farmers who have suitable land give a part of their attention to raising poultry and eggs for market, care for their fowls as they do their cattle, or as they do for their corn field when they are trying for that hundred bushels of shelled corn per acre; leave nothing undone that will increase their comfort and consequent thrift, and I am satisfied that the poultry page in their account book will in a short time be looked at with as much pleasure as any other page of the farm accounts.

You will always find a ready market for fresh eggs and fat chickens at good prices. There will be no fear of glutting the fresh egg market, as this country does not produce enough to nearly supply its wants. Millions of dozens of eggs are imported annually to our shores, the American hen being compelled to compete, unprotected by tariff, with the "pauper" hen of Europe, and the "heather" hen of China. It has been estimated that the cash value of the poultry and eggs consumed in the United States exceeds six hundred millions of dollars ($600,000,000) annually, a greater value than is credited to any other single product of the country, whether cotton, corn, wheat or beef. When, therefore, we speak of poultry and eggs we deal with no small matter, but one that is worthy of our best consideration. I have read of certain breeders who claimed that they made a net profit of from $3 to $6 per hen; but I have never classed myself among such clever poultrymen as these, and I have believed that there was a screw loose in their accounts. Possibly they borrowed the grain from their fathers' corn bins, or sold him their eggs at fifty cents per dozen, and chickens at the price of gilt-edged butter per pound.

I do not pretend that I can show the average farmer how he can attain to these extravagant profits, but I propose to explain how every suitably located farm of twenty to one hundred and fifty acres can carry from one hundred to two thousand laying fowls at a net profit of $2 per hen annually, raising enough chickens every year to keep the number of layers full. The first necessity on such a farm will be a suitable building; still, there are many farmers that could fit up sheds, or a dry barn cellar, that they now have, that would answer the purpose for a limited number of fowls. For the benefit of those who have not such buildings at their command, I will explain the erection of a plain, practical building, to accommodate one hundred hens. This building can be built by any farmer who is handy with tools. It should be shed roof, eighty feet long, twelve feet wide, facing south; and if it

stands on a southeastern slope all the better. For a foundation, use chestnut or cedar posts seven inches in diameter, set three feet in the ground, and sawed off six inches above ground; set these posts ten feet apart, both back and front of building. Upon these posts spike the sills of 2 by 6 spruce. Over each post set studs of 2 by 4 spruce, seven feet long in front and four feet long in rear. In center of each ten-foot section, in front, set two window studs of same dimensions as other front studs. Upon these studs spike the plates of 2 by 4 spruce. Plumb the frame, and board back, front and ends perpendicularly with dry, matched spruce boards. Upon the plates place the rafters of 2 by 6 spruce, two feet apart. Board the roof lengthwise of building with square-edged hemlock boards; eight windows in front, 2½ by 5 feet. The roof and back of building may be covered with the best heavy tarred paper, secured by laths nailed ten inches apart. Cover tarred paper with two coats of coal tar and it will prove water-tight and durable. A ventilator, six inches in diameter, over every second window, will give sufficient ventilation during the very coldest weather. The front and ends should be battened over the cracks and then painted or whitewashed. The inside of building should be partitioned, each twenty feet forming apartments each 20 by 12. Board the partition two feet high at bottom, to keep the male birds from fighting through slats or netting, which may form the rest of the partition excepting the three-foot door in front part of building passing from one apartment to the next. In the rear of building inside, and twenty inches from the ground, make a platform two feet wide running entire length of apartments; eight inches above, and over the centre of this platform, place the roosts of 2 by 3 spruce with top corners rounded. Under the platform place the nest boxes, made as follows: Use a board fourteen inches wide for bottom. Upon the edges of this board nail boards six inches wide, which will form back and front of nests, five inches above bottom board; next put in partitions twelve inches apart, eighteen inches high, making the nests 12 by 14 inches. Nail a five-inch board to the top of partition in front, and to this board hinge the door, eight inches wide, and through which the eggs may be taken from the nests in front, the hens to enter in the rear. Such a nest is appreciated by the fowls, as they may be secluded from the others while laying. It is also easily cleaned and whitewashed. Each nest-box should contain twelve nests, or it may be made in two sections of six each, to secure lightness in moving. The necessary expense for lumber, nails and everything to construct this building will not exceed $70, and you will have a much more practical poultry house for business than an expensive one with fancy trimmings and lattice-work inside, all of which serve as a harbor for lice. Cover the ground inside four to six inches deep with coarse, sharp sand, which will make a dry, suitable floor, and one that will be enjoyed by the fowls during the cold winter. A thorough coat of whitewash inside will complete the building. The house should be near or in the orchard, that the fowls may have sufficient shade in summer; and if the farmer wishes to enclose them at special times during the year, while he is planting the garden or seeding some plot near by, there should be yards in front of each apartment for this purpose.

A. C. HAWKINS
Lancaster, Mass.

The most important of all things regarding the farm poultry is to select a variety of fowls that are hardy, good layers, medium size, quick to mature, and a plump, yellow-legged, yellow-fleshed table fowl. It is also desirable that they be good setters and mothers, as the hatching should be done in the natural way. A cross made by the Leghorn, either Brown or White, with the Light Brahma makes one of the best families of crossbred fowls. Also a cross of the Plymouth Rock and Brahma, or Wyandotte and Brahma.

Although a low grade cow or horse may make a good record, yet, when we look over the list of remarkable horses or cattle, a large proportion of them will be found to be pure-bred animals, raised by men who understood the science of breeding, and who had some great record in view when they caused to be mingled the royal blood that produced the winners. Probably no race of cattle known has made such enormous milk records, or so many of them, as the Holsteins, and we naturally believe that the introduction of such blood in our herds means a great increase in the milk product and in the milk bills for years to come.

When I began breeding fowls, some eight years ago, I was determined to keep only that variety of fowls which combined the most practical merit for a general market, and with this end in view I made many experiments, both with crosses and thoroughbreds. The Light Brahma, Plymouth Rock, Brown and White Leghorn and Houdan were all tried in their purity, and were also crossed with each other to increase the laying qualities of some and the weight of others, keeping nothing further than a first cross. Repeated experiments proved to me that there was no fowl, either half-blood or pure-blood, that combined so many practical qualities as the Plymouth Rock in its purity. The qualities of this variety are too well known to need comment. They have been conceded to be the finest table fowl that enters our markets. Within the last two years they have met their strongest rival in the Wyandotte, which I believe will prove one of the most valuable fowls for the farmer. They are great layers, about the size of the Plymouth Rock, small in bone, but very plump and yellow when dressed. They have clean, yellow legs, which is a very desirable feature in our New England markets. The farmer can make no mistake in selecting either of these varieties in their purity for his regular farm stock. For those who cannot afford to start with a number of these fowls, it would be advisable to procure vigorous, thoroughbred males to cross on the best of your common stock.

With the new poultry house and one hundred vigorous April or early May pullets, twenty-five in each apartment, you are ready to begin business. From careful analysis of the various kinds of food, we find that the constituents of the egg are found in good wholesome proportions in milk, corn, oats, wheat, meat, lime, grass and potatoes; articles available on any farm. In the morning at daylight give the fowls a feed of warm, soft mash, mixed as follows: one-third in bulk of corn and oats ground together in equal parts, one-third wheat middlings, one-sixth ground beef scraps or boiled meat, and one-sixth boiled potatoes. If this morning meal can be mixed with skimmed milk it will be still better and will induce the hens to lay earlier and oftener. Next fill a tight flour barrel with fresh clover rowen that has been run through a hay cutter, and pour upon it four pails of boiling water. Cover the barrel tightly and let it stand till one o'clock, when the fowls may be given all they will eat, which will be considerable after they are used to it. At the same time give them a light feed of wheat and cracked corn, which should be strewn among leaves or some kind of litter that the fowls may get plenty of exercise in scratching for their food. It is very important that they should indulge in this afternoon exercise during the cold weather, as it is conducive to their health and productiveness. Just before dark, feed all the whole corn the fowls will eat, that they may go to roost with well-filled crops of such food as will digest slowly and last them well into the long winter nights. The fowls should have constantly before them clean, fresh water or milk, ground oyster shells, and green food, such as cabbages or raw turnips. With the above bill of fare and regularly cleaned and ventilated quarters, the farmer will be rewarded with a full egg basket every night during the winter.

When the warm weather comes and the fowls are naturally more vigorous, they will need feeding only twice daily, morning and afternoon, and if they are allowed the range of the farm, will need no supply of green food or vegetables; but if

at any time they are confined in yards or buildings, these articles should figure in their regular diet.

It is believed by many that if fowls are confined in yards and supplied with green food, that their eggs will hatch as well as when running at large; but after repeated experiments on this point, I find that eggs hatch much better and that the chickens are much stronger when the breeding stock is allowed unlimited range. When the fowls are given this privilege, the egg is constructed of such material as nature intended it should be, and the nearer to nature we can give our stock at this very important time the stronger and more natural will be the germ in the egg. It is necessary, in order that we may be successful in any business, that we should start right and lay a proper foundation to build upon. If the fowl is deprived of nature's food at the time of breeding, the constituents of the egg will be different from what they should be as food to nourish the embryo chick in the shell. If the chick has been nourished by imperfect food during this early stage of its existence, it starts in outside life in a weakened condition. The chick may have the appearance of being healthy, but if nature's organs are not perfectly constructed they may fail to perform the functions necessary for life, and the chick droops and dies. It is then of vital importance to successful production of chickens that the breeding stock should run at large at the time that the eggs are forming and being deposited that we wish to use for hatching. With this, then, in view, you should place all such stock in the two outside apartments of the fowl house about March 1st, in most localities in New England, allowing twelve hens to each vigorous cock to insure the fertility of the eggs.

If the fowls have been laying abundantly during the winter, many of them will become broody by this time, and all that desire to set should be placed in the two middle apartments of the fowl house. About March 10, place thirteen good-sized, well-shaped eggs under each setter. If both apartments are full there will be twenty-four hens covering the nests, with three hundred and twelve eggs. Care should be taken that the nests are so constructed that the hens can cover them easily, for if the nests are poorly made some of the eggs may become chilled and spoiled. There is no better material than fine, uncut hay for making nests for setters. At time of setting sprinkle both nest and hen with fine tobacco dust, which will insure the coming chicks from lice, although a second application three or four days before hatching would be advisable. If the eggs were fresh at time of setting, as they should be, most of the chicks will appear on the twentieth day of incubation; but if several days old when set, the chicks will be a day or two later.

Allow both hen and brood to remain in the nest for twenty-four hours after hatching, and they will need no food during that time. The hen and chicks may then be removed to a dry coop, two by three feet on the bottom and having a movable board floor covered with fine hay chaff. The coops should be placed not less than twelve feet apart in some sheltered southern exposure, where the chicks may be allowed to run about and bask in the sun. The hen should be confined to the coop for four days, after which she should be allowed to run at large each fair day after the grass has become dry.

The first food for the young broods should be stale bread or crackers soaked in milk, and fed in rather a moist condition. With this food they will need no drink till two or three weeks old, when they may have a constant supply of milk or water, which should be always clean. During the first two weeks the chicks should be fed at intervals of two hours, and from two weeks to six weeks old, five times daily; the first feed always at daybreak, or the first thing in the morning. After they are two weeks old, they may be given a feed of wheat or cracked corn twice daily, but always soft food in the morning. When four weeks old, the soft food may be prepared in same manner as described for laying hens, mixing with milk when it can be spared for them; where skim-milk or buttermilk can be procured at from four to six cents per can, it is a cheap food for chickens, as it will place them in the market two weeks earlier and in good condition.

If it is desirable to raise more chicks than the first hatch has brought forth, the nests may be filled again, and the second broods will be off before May 1st. It is not desirable to hatch chickens for market later than June 1st, as the late broods are not liable to do as well when early ones are about, as the older chicks are stronger and will trample over the later ones to their injury. The chicks of different ages should be kept at quite a distance from each other for this reason, allowing only flocks of same age to feed together. When the chicks are six weeks old they may be removed to some other part of the farm, where they will have a fresh hunting-ground for insects, which will form an important part of their food. They should be placed in small, portable houses, eight feet long, four feet wide, three feet high in front and two feet high in rear, with tight floor and roof. The sides of this building should be boarded perpendicularly, leaving one inch space between each board to secure perfect ventilation without a draught. There should be two roosts, running lengthwise of house, made of 2 by 3 spruce joists.

It is an invariable rule that chickens mature much better, grow larger and faster, and are always healthy, when they are allowed to roost in the trees, as nature intended them to do; but their enemies are so plenty in this section of the country it is impracticable to allow them to roost outside, as when we

This is one of the two cockerels shown at Boston, that were pronounced by Campine men to be the best exhibited this year. He has good type, carriage and head and is remarkably regular in his markings. The sheen of the black, all that is to be desired. He should sire many blue ribbon winners for Mr. Phipps this season.—Louis Paul Graham. Made from retouched photo.

are ready to send them to market the number will be few. A house such as I have described supplies all the favorable conditions of out-of-door roosts, and protects the fowls from all their enemies. Such a building will accommodate forty chickens till the cockerels are ready for market, and will protect the pullets that remain till they are ready to lay. I have proved by actual experiments that chickens six months old will weigh two pounds more, each, when raised in such houses, than those of same age kept in tightly boarded houses with ventilators, etc., both having same feed.

When the chickens are removed to these houses they should be placed at quite a distance from and out of sight of their former habitation; if this is not done, they are liable to go back to their former coops. They should be moved at night, and shut in the house for a day or two, when they may be let out just at dusk, always feeding them near their new quarters. After a day or two they will be contented, and will always be found at night in their new home. If they are placed near some cornfield they will do no injury to the growing crop, and it will serve as a shelter for them from the burning sun. As the season grows later and the hay crop is gathered, these

colonies may be scattered all over the mowing fields to a great advantage to the next season's crop. The chickens will destroy all the insects, and the fertilizer that they deposit will make fields look green.

Farmers, one thousand chickens ranging over your mowing fields from July to November, would be worth more to you than the application of two hundred dollars' worth of commercial fertilizer, and you will be receiving a profit on your chickens besides. I know of a mowing lot that has not been ploughed for fifteen years, but has had large numbers of chickens ranging over it after the hay crops were harvested, and the grass was so heavy on it this season that much of it became lodged before it was ready to cut, and on some parts of it there was harvested three tons of hay to the acre. When the chickens were first allowed to run over this piece of land the owner had to take a rake to get enough grass together to wipe his scythe. It was a poor, run-out piece of land that had been neglected and cropped for years without fertilization. Other pieces of land on the same farm, that have been cultivated and manured within two or three pears, produced hardly enough

The above is an excellent illustration of the sensational first prize White Leghorn cockerel at Madison Square Garden in 1913. Made from a retouched photo.

grass to sustain the grasshoppers that had flocked to them as a feeding ground.

If the first flock of chicks have had abundance of nutritious food, the young cocks are ready for broilers by June 10, when they will dress five pounds to the pair, and, at the usual market price at that season, will sell at 40 cents per pound, or $1 each. The cost of feeding them to this age has not exceeded 25 cents each, which leaves a net profit of 75 cents for every chicken. The later broods will not sell as favorably, but will bring 25 to 35 cents per pound, until at Thanksgiving they will sell at 20 cents per pound. Still at this latter price there is profit in raising them, as they can be raised to six months old for 6 cents per pound, live weight.

The pullets hatched April 1 will begin to show their red combs and start laying about the 1st of October, while the old hens have taken in their signs till after the holidays. The pullets must be taken to their winter quarters before the cold winds of November come on, as they will lay earlier and better for it. The old hens should be killed off, or there must be new quarters prepared for the young pullets. Hens may be kept through two winters with profit, though we must rely on those April pullets for eggs to make the Thanksgiving puddings and pies.

Don't crowd over thirty hens or pullets into each of the apartments in the henhouse, as you will receive more eggs from twenty-five to thirty than from forty to fifty in the same room. Remember this. It is one of the important points in keeping fowls for a profit. It has caused more disastrous failures and has discouraged more poultrymen than any other one thing, excepting incubators. Many people have an idea that one hundred hens will give four times as much profit as twenty-five. Well, they will, but they must be kept under as favorable conditions. They must have four times the room, be kept in four flocks, given four times the care and food, and then they will pay you in the same proportion as the smaller number. If you desire to keep more fowls, you must extend your accommodations for them, never allowing less than eight square feet of inside room for each fowl. There is no reason why you cannot keep a thousand as well as a hundred, only do not start with the thousand till you know how to care for the hundred. I have no doubt that you could give the poultry the entire farm to run over, and put your attention to them so that they would yield you more clean profit than any other farm stock.

Some will say that everybody is going into raising poultry, but don't be afraid of that. There is always plenty of room at the top for all of us that can get there.

What you should strive to do is to raise a better quality of goods than your competitors, and then you will have none. If you can furnish a hotel with fifty or a hundred dozen of eggs per week of uniform color, of good size and clean, warranting every one laid within two days of shipment, you will find no lack of customers for your products, at fancy prices. Even if you depend on your grocer for a market for your eggs, it will pay you to have them uniform in color and size and clean; then, when the times of plenty come, he will take your product in preference to some other farmer's, who believes that an egg is an egg, whether white or brown, large or small, clean or dirty. Work up a reputation for yourself for always having the best, and your customers will come to you, instead of you seeking a market for your goods. In the town where I live there was a grocer who had the name of being a little sharp; one day an old Shaker drove up in front of his door and went in and asked the grocer what he was paying for eggs. The grocer replied, "Twenty cents a dozen," "Well," said the Shaker, "can't you allow a little more for some that are extra large?" "Oh, no," said the grocer, "an egg is an egg with me; I make no difference in price." At this the Shaker went out and brought in about twenty dozen of the very smallest pullet's eggs, such as most of us would be ashamed to sell at all. The grocer emptied the basket without comments, and learned that there was some difference even in the quality of eggs.

There is another crop on the farm that is much benefited by keeping large numbers of fowls, and that is the fruit crop. The fowls are very valuable in destroying the borers and other insects that are injurious to fruit trees of all kinds, and a very vigorous and healthy growth of the trees will be noticed around a farm where poultry is kept. The manure seems especially adapted to them, and the fruit will be more plenty, and of better quality. Fowls are more valuable in connection with the cultivation of plums, as there are very few localities where this fruit can be raised, on account of the destruction of the fruit by the curculio. I have now on my place nearly one thousand plum trees, and nearly all trees that are over three years old bear heavy crops every year. A small part of the fruit is stung by the curculio, and drops off, but we have to pick many more to prevent the trees from breaking and to insure a good quality of fruit. Other farms in the same locality, where plum trees are not so favorably located, very rarely get a full crop of plums. Fowls are also valuable in keeping the borers out of the quince bush. It is only necessary to loosen the soil about the bushes, as the fowls will do the rest.

An important item in the keeping of poultry is the large quantities of valuable manure produced. The best method of retaining the ammonia in this manure, which is held in quite large proportions, is to spread dry loam or plaster under the

roosts, and then store the mixture in barrels. It will hold its strength in this form, and will prove one of the most valuable fertilizers for corn, grass or grain. It is very strong, and must be composted thoroughly before using it in contact with seed; but if properly applied, it will act quickly on the crop, as its elements of plant food are of such a nature as to be easily assimilated by the plant.

Now a word in regard to the use of artificial incubators by the farmer. Some of you, perhaps, may have used them and, as you think, successfully. I have tried them for several years, having used all the best machines, and I would not take the best one that is manufactured today as a present, if I was obliged to use it myself. Chickens hatched by the hen are much stronger, larger and finer in plumage; there is as much difference between artificially produced chickens and natural ones as there is between Jersey butter and oleomargarine. Nature does her work perfectly when she has proper opportunity. Many will ask how they are going to hatch chickens by the thousand? Just as I have told you how to hatch them by hundreds. You must keep more fowls and there will be abundance of sitters at the proper season. I have probably hatched and raised more chickens during the last six years than any other breeder, and the incubator has hindered more than it has aided me. I have had hatched on my place, in one week, over 1,500 chickens, all with hens. That is fast enough. I have probably spent more than $2,000 trying to convince myself that artificial chicken production was a benefit to me, but after the long struggle I haven't an incubator on my place; still the chickens hatch and grow.

Farmers, if you do not care to put a part of your attention to the poultry, give the boys a start. Buy them good stock and let them study the science of breeding. It will be a benefit to them later in life in breeding larger stock. Let them be doing some business of their own. Build comfortable houses for their fowls and encourage them in their work. They will see the reward forthcoming and will take an interest in the business. Give them the use of a corner of the farm, or let them use the most of it at certain seasons of the year. It will be an advantage to your crops and they will show you that the poultry is the paying crop of the farm. When drouth and frosts ruin the field crops the poultry will be left to pay the bills.

The farm that I now occupy did not produce crops that would sell for $100 in 1875, and in 1884 the sales from the same farm will exceed $10,000; and if things go onward as in the past, if the fruit trees that are now young produce such crops as those that are old enough to bear, the products will sell for $25,000 in 1890.

Discussion Following Lecture.

The Chairman. Gentlemen, you have listened to one of the most interesting papers of this meeting, and now there is an opportunity to discuss the question which has been treated in such an instructive and interesting manner by Mr. Hawkins. If there are any in the audience who have any questions to ask, Mr. Hawkins no doubt is as well prepared to answer them as any one.

Question. I did not quite understand what you used for your mash for the fowl?

Mr. Hawkins. One-third provender, corn and oats ground together, in equal parts in bulk, one-third middlings, one-sixth meat, and one-sixth cooked vegetables.

Mr. Grinnell. You did not speak of the Game nor the Dorking.

Mr. Hawkins. No, sir.

Mr. Grinnell. I think that a Game cock and a Brahma hen make an exceedingly good cross.

Mr. Hawkins. I think they would. They are something of the same nature as the Leghorn and Brahma.

Mr. Grinnell. You confine yourself to Plymouth Rocks.

Mr. Hawkins. I have the Wyandotte and Plymouth Rock.

Question. What is the origin of the Wyandotte?

Mr. Hawkins. The Wyandotte is procured by crossing the Dark Brahma with the Silver-Spangled Hamburg. They are a fowl of medium size.

Mr. Munson. I did not understand what the speaker said of the Hamburgs.

Mr. Hawkins. I said nothing good of them. I don't think I mentioned them excepting just now. I was asked to state the origin of the Wyandotte, and I said they were the result of a cross of the Silver-Spangled Hamburg and Dark Brahma.

Mr. Grinnell. You get black legs, don't you?

Mr. Hawkins. No, sir; orange yellow; the best colored legs of any fowl I ever bred.

Question. What is the cause of gapes in chickens, and what is the remedy?

Mr. Hawkins. It is caused by worms in the windpipe, and those result mostly from filth around the buildings. The best way to prevent the trouble is to have nothing of that kind about; but if fowls are attacked with it, they can be confined in a barrel, lime put in the barrel, and they will breathe the fumes, which will cause them to choke and throw the worms out of the windpipe. That is the best remedy I am aware of, although I never had any trouble from the disease.

Mr. ———. I am very glad to have this poultry question brought up for discussion. I have looked into this matter for a year or two, and have come to the conclusion that it is one

The above is an excellent illustration of a wonderful S. C. Buff Orpington cock bird bred by A. B. Porter, the Orpington Specialist at LaSalle, Ill. Mr. Porter's yards have produced many winning Buffs the past few years and he reports the quality better than ever this season. Made from retouched photo.

of the most neglected branches of industry on the farm. The paper which has been read I hope will set us thinking and investigating. It costs us to produce beef and pork, six, seven or eight cents a pound, and that is all we can get for it. To produce poultry per hundred pounds or per pound costs no more, I believe, than it does to produce pork; and it will produce, live weight, more than double what pork will produce, dressed weight.

I heartily agree with the speaker when he says, "Encourage the boys; give them something to keep them at home; give them something to interest them in the farm." Two years ago I visited the hennery of our lecturer, and bought a trio of fowls for my boys; I made them a Christmas present of them. They were shut up, and an exact account kept of everything that was fed to those fowls. Some of the chickens were sold for broilers, some were sold for breeding purposes, some

of the eggs were sold in the market and some were sold for setting. At the end of the year, the result proved that from those three pullets and a cock $56 and some cents had been realized, which, with the balance on hand, made up $66 and some cents. Now they are working out the problem this year: If $14 can be produced from one fowl, how much can be produced from fifty? What the result will be I do not know; but I would urge upon farmers that they give their boys something to interest them. Make your boy a present of some poultry, let him manage them himself and have the proceeds, and he will take a great deal more interest in the farm, and not be so apt to want to leave it the first opportunity.

Mr. Ballard. I have not heard anyone bring out one point so fully as the lecturer has, and that is, in regard to milk for feeding fowls. I have followed the practice for the last ten or fifteen years. About seven years ago I was feeding my pigs milk; the price of pork was pretty low, and I said, "After this I will feed all my milk to my fowls." I have made up my mind that I can make more on one dollar with fowls, by feeding my milk to them, than I can on four dollars with swine. I keep from eight to ten cows, and the fowls and chickens take all the milk. It answers for grain and meat and all things combined. I believe it is the testimony of chemists that milk contains more of the constituents of the egg than any other food.

Question. I would like to ask the speaker to what time of this year his remarks with regard to the food given in the morning apply; whether the year round or only in the winter?

Mr. Hawkins. That was only for winter food. I mentioned that that was cold-weather feeding. When the season grows warmer take a different food.

Mr. Ballard. I let my fowls run at large.

Mr. Hawkins. It makes a great deal of difference whether they are at large or confined. I mentioned that they would not need some of those articles when they were allowed to run at large.

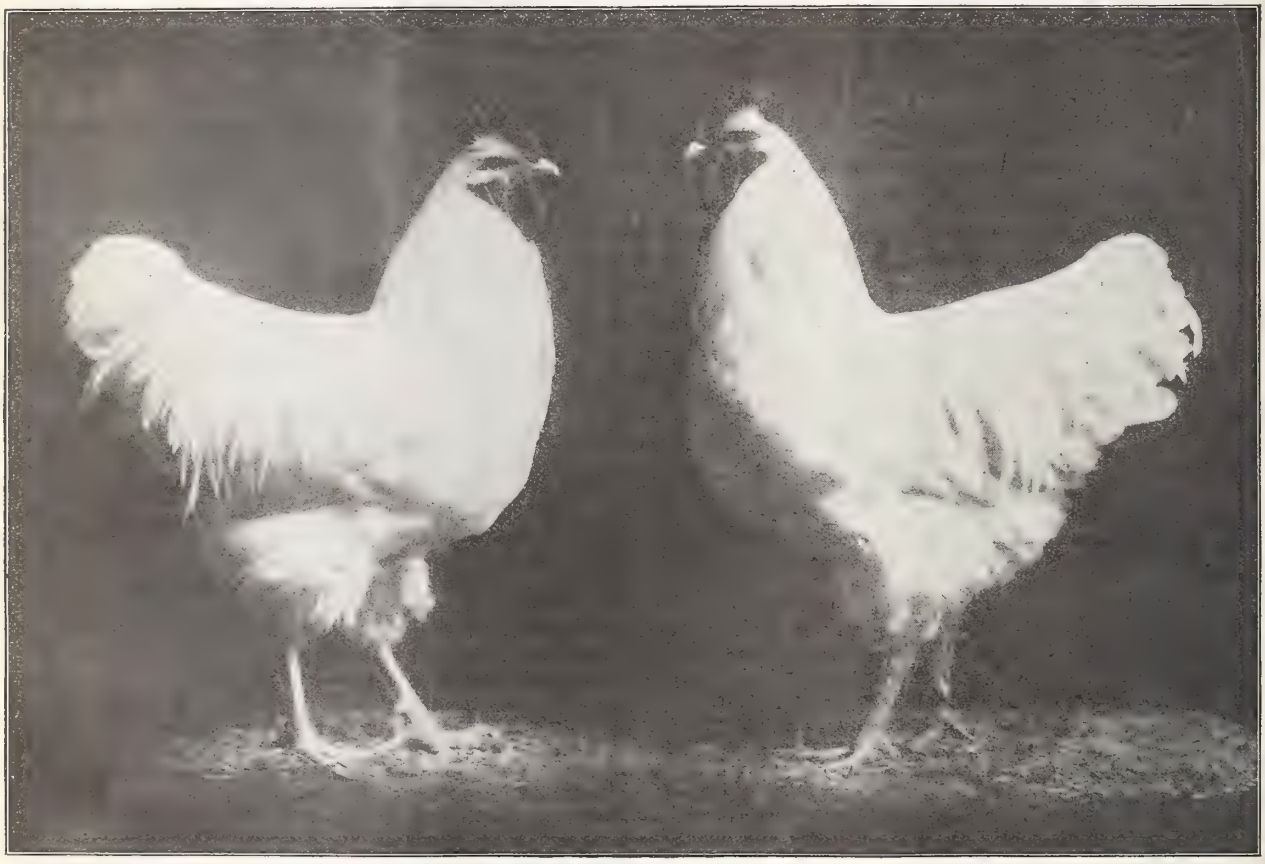
Mr. Ballard. Have you ever used soap-chandler's scraps?

Mr. Hawkins. I have used them, but I have meat that I like better for the purpose. It is selected from the markets in the city every day, and boiled for the tallow, and the meat that boils from the bones I have saved for me. It comes in a cooked form, ready to feed. It will not keep long in warm weather, but I feed so much of it that I get it fresh every day.

Mr. Ballard. I tried some of the animal meal. I don't know what it is. It is like a good many other things that we buy, that we don't know much about. Finally I went down to the soap-chandler's and bought five hundred pounds of scraps, and I have followed it up every winter. I put it where my fowls can go and eat it whenever they wish, and I have had very good success with them in the winter.

Question. How do you keep eggs from freezing in winter?

Mr. Hawkins. If the house is constructed as I advise it should be, the eggs will not freeze during the day in the building. I do not want to leave them in the nests more than one day. In cold weather the eggs should be collected every night, and there will be no trouble from freezing.



Question. Will you state how you cover your house?

Mr. Hawkins. It is covered with tarred paper on the back and sides, and the front is battened, so that the eggs will not freeze.

Mr. Beebe. I have about eighty hens that I have bred from the old dunghill stock, without crossing whatever, for twenty-seven years. They are good layers, they come to maturity quicker and are a great deal handsomer than the fancy breeds. I have plum trees about my henneries. My hens have the free run of a thousand acres, and there are no fowls nearer my flock than a mile, so I don't think they have been crossed. My plum trees bear fine fruit.

Question. How do you break up sitters?

Mr. Hawkins. I have a room in the center of each of my long buildings with no nests, and when a hen wants to sit she is carried to this room, and in four or five days she has got over her disposition and will go to laying again.

WHITE PLYMOUTH ROCKS.

Unretouched photo of the brothers of the First Chicago Cockerel. By this pair of magnificent youngsters you can see that the parents of these birds have produced not only one or two, but many, most excellent show birds. The past season Mr. H. W. Halbach, R. R. No. 1, Waterford, Wis., had fifteen pens mated and there was not a single pen that did not produce show birds. This shows how good the blood in the Halbach Strain breeds on.

Worst Pest of Poultry--The Chicken Mite

Small in Size, Yet the Mite's Parasitic Method of Feeding and the Rapidity With Which It Can Increase Makes It a Real Menace

By James B. Morman

TOO LITTLE ATTENTION has been given to the chicken mite. It is by far the worst pest of poultry and the greatest drawback to successful poultry keeping. The mite is so small that it can barely be seen by the unaided eye. For this reason the dangers which lurk in this minute pest are often overlooked.

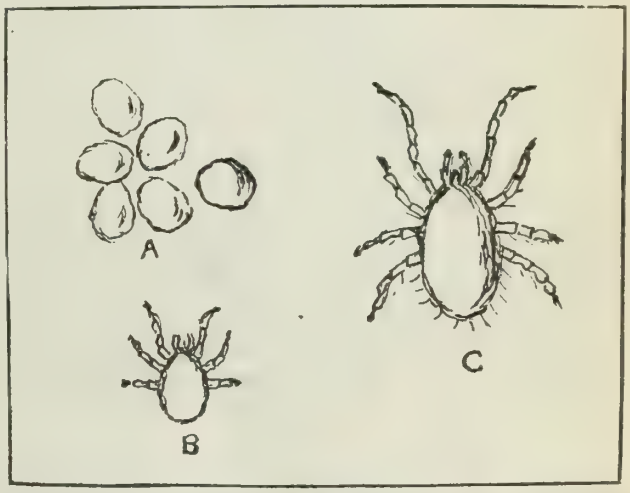
Habits and Spread of the Mite.

The chicken mite *(Dermanyssus gallinæ)* does not constantly live on its host, so that it is not a true parasite. If it always lived on the chicken, the latter would doubtless have a natural means of ridding itself of the pest the same as it does lice, but the habits of the mites place fowls at a disadvantage. They cannot fight the pest, so the poultryman must fight the mites for them.

During the day chicken mites ordinarily inhabit cracks and crevices of the walls of poultry houses, under the roosts, behind supports, and in all conceivable places. At night they leave their hiding places, crawl onto the fowls, suck their blood until they are gorged with it, and then congregate in their hiding places. If left undisturbed they multiply to thousands in a short space of time.

Though small in size, the mite's parasitic method of feeding and the enormous numbers to which this pest can multiply make it a real menace. It does untold damage when least suspected. If mites infest the roosting places, young chickens fail to grow as they should because of the loss of blood; if mites are unmolested, young chickens will frequently be found dead under the perches from mite infestation. Losses which poultry keepers sometimes sustain are attributed to disease when mites alone are the cause of death. At the same time, chicken mites may carry diseases from one fowl to another, just as mosquitoes are known to carry malaria, yellow fever and other diseases. Sitting hens are often so annoyed by the multiplication of this pest that they leave their nests and will not return to them. Many a prospectively good hatch has been ruined in this manner.

The chicken mite thrives best in the summer season and in warm climates, but cold weather does not destroy them. They hibernate and many of the younger mites live over until the spring when they become active with the advent of warm weather. This is likewise true of the eggs laid in the cracks of poultry buildings late in the fall which hatch out in the spring. Fowls carry the mites from one roosting place to another, for when mites become very numerous they sometimes harbor on fowls by day. Birds are also active agents in the spread of this pest. The English sparrow frequently harbors and is one of the hosts of the chicken mite. Sparrows become inoculated with these mites because they line their nests with poultry feathers. When these nests are deserted, thousands of mites and their eggs may be left to infest old or new poultry houses.



How the Mites Multiply.

I recently placed some of these pests in a concave slide and made a microscopic study of their life history. By the naked eye a full-grown mite appears as a mere animated dot, but under the microscope, it is seen to have more or less of a complex anatomy. The body is not segmented like the body of an insect, but forms a single mass. When fully grown the chicken mite possesses four pairs of well-segmented legs, each of which is supplied at the end with a suction valve which enables the mite to hold itself easily to any kind of surface. The head has a pair of simple eyes only and the mouth parts are formed for piercing the skin and sucking the blood from the chicken. Respiration is effected by the general surface of the body only.

Of the mites under the microscope, the females gorged with poultry blood began to lay eggs within twenty-four hours. From seven to thirteen eggs were laid. The eggs are invisible to the naked eye and so are the young mites when first hatched. The eggs began to hatch out in from thirty-six to forty-eight hours, according to the temperature of the room. In hatching the smaller end of the egg slowly develops and unfolds into the head, mouth parts, and the first three pairs of legs, while the larger end of the egg forms the body proper of the mite. There is no discarded shell or covering of any kind, since an egg simply develops into a young mite which is immediately active and ready for food. As just stated, when first hatched a mite has three pair of legs only, a fourth pair developing from twenty-four to thirty-six hours afterward; but lack of a pair of legs by no means interferes with the young mite's activity and voraciousness. In a week or so a mite becomes fully grown, ready to lay eggs, and multiply the pest indefinitely. If left unmolested for a season, the progeny of a single mite will number hundreds or even thousands.

Prevention and Remedies.

One of the first precautions against mites is to have poultry houses and roosts as free as possible from places where they can hide. Perches should be so constructed that they can readily be removed, examined and cleaned. The habits and anatomy of the chicken mite are such that prevention is better than cure. Thorough cleaning and whitewashing of poultry houses will be an important aid in keeping this pest in check.

A—Group of mite eggs. B—Newly-hatched mite. C—Mature chicken mite. Enlarged 60 times the natural size. See article "The Worst Pest of Poultry, the Chicken Mite."

Where mites are very numerous, an addition of some kerosene and carbolic acid to the whitewash is effective. Since mites can hide in very minute cracks, care should be taken that every crack in the sides of the poultry house is well filled with the whitewash. If whitewash dries on a mite it prevents its breathing and kills it. The perches should be examined every day, painted over with kerosene, and placed in the sunshine. A liberal use of kerosene forced into the cracks of poultry roosts is a cheap and effective remedy against chicken mites.

Sometimes fumigation of poultry houses, especially in warm climates, is advisable when infestation with mites is serious. A simple plan recommended in the American Poultry Journal Yearbook for 1914 to kill mites is to burn sulphur. This should be done when the weather is such that the fowls can be excluded from the house for at least five or six hours. Close all doors, windows and cracks to exclude the air. Get an iron or zinc vessel, set it on some earth in the center of the house, place some shavings or excelsior saturated with kero-

sene in it, sprinkle sulphur in proportion of about one pound to every 100 square feet of floor space, light the material and hastily leave the house, closing it tightly. Allow the house to remain closed for at least three hours and then throw all the doors and windows wide open to drive out the sulphur fumes. After the house has been thoroughly aired, the fowls may be permitted to enter.

Since the active mites only would be destroyed and not the eggs, it will be best to repeat the fumigation once or twice every few days to destroy any newly-hatched mites. In this way the pests will all soon be exterminated. Thus it is evident that constant vigilance is the price of freedom from chicken mites, but the gain to the poultry keeper is well worth the time and trouble.

The Poultryman's Great Opportunity

Eggs and Poultry Are Certain to Be High and Scarce—The National Egg-Laying Contest Monthly Report

By T. E. Quisenberry

THERE is no reason for good poultrymen to be alarmed because of the present situation which we are facing on account of the European wars or the high price of feeds. The man who has a good laying strain of pure bred poultry is going to get enough eggs this winter to pay his feed and labor bills and net him a nice profit. Neither will the man who has a good strain of pure bred exhibition poultry suffer, because good breeding stock and eggs in 1915 are going to be scarce and high. We believe that eggs will likely be higher this winter than ever before. So the good poultryman need not be alarmed. On the other hand, we believe this is really the poultryman's opportunity. But the fellow who will suffer most is the man who has scrub poultry that has neither been bred for eggs nor exhibition.

When times get hard or the price of other food products advance, then it is, as is shown by the past history of the industry, that people turn more to poultry raising than before. Thousands of shop men, clerks, mechanics and laboring men in cities and small towns then turn to poultry as a side line to help pay the "high cost of living." It is certain to be so again. However, because of this uneasiness, there is great danger of many fine flocks, which it has taken years to breed and perfect, being sacrificed this fall and winter. This war is causing feed to advance in price, but it will also cause eggs, poultry and practically all other food products to advance in proportion. Poultrymen will be inclined to become frightened at the high cost of grains and sell off their stock so close that their business will be crippled this winter and next season. The price of eggs is going to be high beyond a doubt. The question with you ought to be, "How to get the egg." There will be a great demand next season for eggs and stock for breeding purposes. Our advice is not to decrease your flock in size so that your business will be crippled this winter or next season.

We have harvested the greatest grain crops we have had for years. Beef, mutton and pork are scarce and high, and are rapidly advancing in price and continually getting scarcer. The world must depend upon the United States largely for its food stuffs. One of our own Missouri packing plants has received an order from Canada within the last few days for a million pounds of dressed poultry. Some of this we understand is for export to England. Take courage, my friends, for if I am not mistaken the greatest opportunity that ever offered itself to American poultrymen lies before you within the next two years. It will take these warring nations several years to recover from the effects of the war, even if it should close now.

We don't advise overdoing the thing. We would not keep a lot of surplus males not fit for sale or use as breeders. Don't keep a lot of drones, or deadbeats, or a lot of old hens which have outlived their usefulness. Get rid of all dead weight, but do not become unnecessarily alarmed and sacrifice a valuable flock which is almost certain to make you good money before the next season has closed.

National Egg-Laying Contest for August

The hens in the National Egg Laying Contest at Mountain Grove, Mo., did almost as well in August as they did in July. The 600 hens in the National Contest proper have averaged 149 eggs per hen in nine months, which is five eggs more per hen than they averaged in twelve months last year. The Leghorn section has done nearly as well, but the Utility Contest has never done as well as it should have done. The hens have been difficult to keep in condition and they got a poor start at the very beginning.

The total number of eggs for August was 13,909. A Missouri pen of White Leghorns from Marshfield won the honors for the month by laying 220 eggs and also worked its way up to second place. The English pen is still leading all others by 228 eggs for the whole time. This entire pen of ten hens from England has averaged nearly 200 eggs per hen for the period of nine months. This is better than has been done in any of our previous contests. A pen of Barred Plymouth Rocks from Ohio has made a splendid record so far and was among the ten highest pens for August and also is among the ten leading pens for the entire period. Two English pens, two New Zealand pens, and one from Australia were among the ten highest for August, also White Wyandottes from Pennsylvania and White Plymouth Rocks from Texas. S. C. Reds from Missouri are among the ten leading pens, but Nebraska has the honor of having the highest individual record. A S. C. White Leghorn laid 218 eggs in nine months. Two Barred Plymouth Rocks, one from Iowa and one from Michigan, have laid over 200 eggs each in nine months.

The best pen record made by the representatives from the various countries is as follows:

	Eggs.
S. C. White Leghorns made best English Record	1,964
S. C. White Leghorns made best United States Record	1,736
S. C. White Leghorns made best Missouri Record	1,736
S. C. White Leghorns made best Vancouver Island Record	1,516
S. C. White Leghorns made best New Zealand Record	1,440
S. C. White Leghorns made best Australian Record	1,438
White Wyandottes made best Canadian Record	1,352
S. C. White Leghorns made best British Columbian Record	1,322
S. C. White Leghorns made best South African Record	1,143

The pens which have made the best records for all times and which stand at the head as the best ten are as follows:

Pen—	Eggs.
0—S. C. W. Leghorns, England	1,964
65—S. C. W. Leghorns, Missouri	1,736
79—S. C. W. Leghorns, Pennsylvania	1,722
47—S. C. Reds, Missouri	1,697
18—White Wyandottes, Pennsylvania	1,622
70—S. C. White Leghorns, Missouri	1,610
9—S. C. White Leghorns, Pennsylvania	1,601
59—Barred Plymouth Rocks, Ohio	1,538
61—S. C. White Leghorns, Nebraska	1,521
24—White Wyandottes, England	1,517

Several hundred hens were broody during the months, but in spite of that fact most pens held up very well, and the ten highest for August were as follows:

Pen—	Eggs.
65—S. C. White Leghorns, Missouri	220
75—S. C. White Leghorns, England	214
102—S. C. White Leghorns, New Zealand	214
3—S. C. White Leghorns, Australia	201
59—Barred Plymouth Rocks, Ohio	196
79—S. C. White Leghorns, Pennsylvania	195
0—S. C. White Leghorns, England	192
18—White Wyandottes, Pennsylvania	183
101—S. C. White Leghorns, New Zealand	182
57—White Plymouth Rocks, Texas	179

The indications are that we will not have any exceptionally high individual records, but the hens are averaging up better than ever before. The hens which have laid over 200 eggs in nine months are as follows:

	Eggs.
No. 611—S. C. White Leghorn, Nebraska	218
No. 05—S. C. White Leghorn, England	216
No. 653—S. C. White Leghorn, Missouri	213
No. 02—S. C. White Leghorn, England	206
No. 566—Barred Plymouth Rock, Iowa	203
No. 864—Barred Plymouth Rock, Michigan	201
No. 06—S. C. White Leghorn, England	200

Construction and Location of Nests

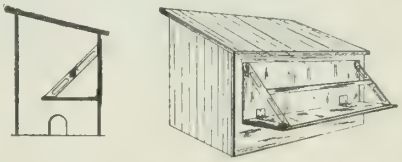
Useful and Practical Suggestions as to Size, Convenience and Simplicity of Construction

By W. C. Hunter

IN THE MATTER of providing nests for the poultry house, the tendency is generally toward extremes. Either we give them practically no thought, supplying in makeshift fashion any kind of a box, placed anywhere, or we install one of those complicated mechanisms called trap-nests. Not that the trap-nest, as such, is not a useful article, but that trap-nests in continuous usage are useful only in proportion to their simplicity.

The orange or grocery box makes a fairly serviceable nest, but it is hardly satisfactory to anyone keeping a hundred or more fowls. The proportion of nests to the number of fowls kept is, according to the breed, about one nest for every four to six hens. They should be so placed as to offer seclusion, at the same time being conveniently located for both hen and attendant, and easy of disinfection and cleaning. Like all poultry house construction, the expense should be kept as low as possible.

The size of a nest is somewhat dependent upon the breed. For small fowls, such as the Leghorn, ten inches is sufficient. For Plymouth Rocks, Rhode Island Reds, Wyandottes, twelve or thirteen inches square is proper, and for Brahmas, Cochins and Langshans, it is necessary to allow fourteen or fifteen inches square to each nest. The mistake is sometimes made of making nests too large for one bird and too small for two, with the result that two birds try to crowd into it and eggs are usually broken. More birds get the egg-eating habit through breaking eggs on the nest than in any other way. Egg shells are of different thicknesses, varying from thick and hard down to those which are a mere tissue. With two hens tramping around or squabbling on such eggs, breaking is inevitable.



Sometimes it is advisable to provide nests large enough for three or four hens to lay in at the same time. Prof. Graham, of the Massachusetts Experiment Station, uses such a nest on his home plant. It is sixteen by twenty-four inches, and he has had no trouble with broken eggs. In cold weather, eggs in a large nest will usually be kept warm all day, and, if they are to be used for hatching and there is no one at hand to gather them, the large nest is particularly serviceable.

Hens like to lay in a fairly secluded, dark place. It, however, should not be so dark that they cannot see. They are more contented and less restless in such a place, less liable to break eggs, or to be bothered by hens not on the nests. The best position for nests is where droppings-boards are used under them with the opening facing towards the wall. This location fulfills practically all the requirements of seclusion, best use of space, etc. It is not good practice to place nests on the floor, as there they take up space that might otherwise be used for scratching, and there the eggs are most liable to be broken. In such a place, eggs are most accessible to rats. If hens have eggs constantly before their eyes, they are likely to pick at the shells and thus finally to break them. It is also a constant invitation for the hen to sit, especially for a bird with a strong motherly instinct.

The idea of having the hen enter the nest from the top is not a good one; if the nest is deep it is almost certain that eggs will be broken by the hens alighting on them. In nests located on the floor, the sitter is bound to be bothered by other hens. Oftentimes one of them will pick at the comb of a sitter until it starts blood and the hen that is laying is forced from the nest; then the intruder will sit on the nest for a moment or two as though meaning business. But only for a moment, when she will nonchalantly hop off the nest and go to scratching, in such a manner as to indicate the passing of the entire episode from her mind and that it was nothing but a momentary whim and a covetous desire to possess something another bird had. Then, too, if you were to provide one nest for each hen, they would probably all desire to lay in a very few of them. The hen, as well as man, has her psychology.

The height of the nest from the floor is somewhat dependent upon the breed. The small, agile Leghorn can fly up or down a greater height, with less chance of injury, than can the heavier and more cumbersome fowls of American or Asiatic breed. For Leghorns, two and one-half feet is right, and, something less than that, or two feet, for the others. Irrespective of height, it is well to place a running-board six inches wide along the front of the nests for the fowls to light or stand on.

The construction should be such as to facilitate the riddance of pests. Nothing helps toward this so much as to have nests removable, so as to be able to take them outside into the strong light and to give them a thorough cleaning. I advise the use of planed boards for nests; not only does the planed surface offer less chance for hiding places, but, if you are applying disinfectant with a brush, you can cover a smooth surface much quicker than a rough one. Wire-bottomed nests are sometimes advocated. I have used such nests and do not believe they offer any advantage over the wooden-bottomed nests, while they do have the disadvantage that it is very hard to keep nesting material in them. Just as soon as the straw gets out of the nest you begin to have a lot of trouble with broken eggs. Aside from the fact that they are lighter to handle, due to the less quantity of wood used in their construction, there is little preference of one kind over the other. But a nest having a wooden bottom, which is not nailed on, would be decidedly more preferable than one on which wire was used and where it was nailed on. The use of a removable bottom is one of the best ideas in nest construction. The nest simply sits on the bottom boards. Whenever it is desired to renovate it, you have but to lift off the top, clean off the bottom, and readily replace the top.

See article "Construction and Location of Nests."

The partition between each nest does not have to reach from the bottom to the top; suffice it, that it is high enough to keep the eggs from being rolled from one nest to another, and, if so desired, it also can be made low enough to allow the fowl to pass from one nest into another. It is wise, in all construction of poultry-house fixtures, to have them as light as possible. Unless this is done you will learn that the labor necessary to cleaning is sufficient to discourage that persistent, regular attention necessary to keep them sanitary and free of pests. The mere thought of the work involved will serve as a dampener to initiative, and you will find that you keep putting off the task until troubles, a little regular effort would have prevented, multiply into a problem of considerable magnitude. It is the nature of man to perform the little tasks as they appear, as part of his day's work, but to put off for more suitable occasions, those involving much labor. Hence, if fixtures are light you will give them the necessary regular attention without much thought about it, and should have little bother with pests or disease.

If dropping-boards are not used, or it is desired not to place nests under them, a good plan is that shown in Fig. 1. This nest tier faces to the wall, the entrance being from the rear. The front is fifteen inches high, rear ten inches, distance from front to rear fourteen inches, and the alley along the front is nine inches. The board in front of the nests, which holds the straw in, is four inches wide, and the partitions are twelve inches high. Part of the back opens on hinges to allow the removal of the eggs, and the bottom is separate, allowing the whole top to

be lifted off for cleaning. The diagonal leg beneath serves as a support. It is advisable to use the sloping top on nests not under the dropping-boards, as it prevents fowls from roosting on top and the slope hinders the accumulation of droppings.

A good type of nest is the so-called nest drawer, Fig. 2. This drawer slides in underneath the dropping-boards. To make it you need stock as follows:

1 board	4′ 6″ x 9″	(A)
2 boards	21″ x 9″	(B—B)
3 boards	15″ x 6″	(C—C—C)
1 board	4′ 4″ x 4″	(D)
boards	4′ 6″ x 21″	(E—bottom)

The bottom is allowed to project seven inches beyond the front of the nests, serving as a running-board. You also need two sticks of 2x3, each three feet long. From each of these saw a corner 1″ x 1″. These corners (F) are nailed along the sides of the drawer to provide a runner. The joist from which the corners were cut are nailed onto the joint which forms part of the bottom framework of the dropping-boards. A strip of wood can be nailed along the front underneath to provide a handle to draw out the nest.

If the droppings-board is made of boards running lengthwise, and is more than ten feet long, it may be necessary, when using this style of nest, to use a brace to keep the droppings-board from sagging. This can be done by supporting it with a vertical post, though such a post is apt to be in the way, and the better method is to use the diagonal brace reaching from the front side of the boards to a point where the back wall joins the floor, as is shown supporting the nest in Fig. 1. This nest drawer is the idea of Prof. Graham, and both illustrations are reproduced with his permission.

The proper time to make provision for nests is when the house is being constructed. In this way their place is allotted with reference to the other fixtures. When any other method is pursued they are apt to be placed haphazardly anywhere, and the most economical usage of space is not possible. In other words, the correct arrangement of fixtures in a poultry-house, like everything else, calls for some forethought.

Poultryman's Practical Dispensatory

Chapter IV—Disinfectants as Exhibited in the Coal Tar Series and Their Practical Uses

By J. H. Petherbridge

IF I MAY JUDGE from a number of inquiries that have come to me, there exists in the minds of some of the readers of these letters a misunderstanding as to their intent, purpose and limitations. *Drugs, their values, use* and *abuse* as they appertain to the poultry industry and the discussion of some *limited* to what may be of practical utility to the average poultryman, was the writer's design.

For me to attempt to also cover poultry diseases, their causes, effects, how recognized and give detailed treatment for each poultry ill would not only be superfluous but presumptuous in view of the able manner in which these topics are already presented monthly in the A. P. J., but would of necessity still further curtail the amount of information I may be able to offer about drugs, a subject I can by no means exhaust, even with no excursions into adjacent fields.

In order not to have to refer to this matter of *limitation* again, as an explanation of possible omissions in what I have already written and seeming neglect or oversight in anything further I may offer, I wish to definitely and finally outline the angles from which I desire by "offerings" viewed:

Drugs:—Extended notice given only to such remedial agents as are well known, easily obtained in any community and so cheap that their employment makes no material addition to the expense account. Drugs of high potency, valuable doubtless in the hands of an expert but a menace in ordinary use without experience, drugs that are not dependable because of deterioration and chemical change upon exposure to light and air, and drugs difficult to procure and too costly for a profitable "cure," will only be referred to briefly or mention entirely omitted.

Values:—Among the mineral salts and vegetable extracts there are many antacids, laxatives, sedatives and tonics of merit: their *actual* values as regard their known action on the animal organism may be identical and described in the same terms, and yet their *relative* values differ materially as efficient poultry remedies.

To *assist* to a wise and economical selection is one of the main purposes of these papers.

Use and Abuse:—I do not anticipate that my recommendations or my objections to certain accepted remedial agents will be received without some protests. Even "doctors disagree" and, although I may be able to back my statements and strictures by expert opinions, I am aware that my possible critics can quote authorities equally eminent. If my advice or warning appeals not to your reason, common sense, or runs counter to your experience, it is not good advice or a needed warning for you. If, on the other hand, my words ring true before these judges, that are better guides than books, your commendation will mean more to me than the condemnation of all "experts."

Disinfectants:—Cleanliness and the periodical use of a good disinfectant are our best safeguards against disease and vermin. But the too common idea or conceit that the more we can pollute the air of our chicken houses with ill-smelling disinfectants, the more sanitary we make them, is an unfortunate and costly conclusion. A thorough cleaning up should *precede* the use of a disinfectant, and *after cleanliness* must become habitual for effective prevention. *Once free* from disease germs and parasites, we can depend upon whitewash and sunshine as our best and sweetest disinfectants if we are willing to lay on the one and let in the other.

Another common mistake is failure to recognize that there is a vital difference between a disinfectant and a deodorizer. A deodorizer does not kill the disease germs, but simply substitutes one odor for another, and not infrequently gives us a sense of false security.

Among products in general or occasional use as disinfectants may be mentioned carbolic acid, lime, sulphur, zinc, permanganate of potash, kerosene, benzine, naphtha, formaldehyde, turpentine and numerous petroleum and coal tar compounds sold under sundry trade names. All of these substances and products have their proper uses and distinctive values, and whereas without exception they are capable of destroying insect life when brought into direct contact with it, are not all true germicides, and some of them are far from being safe disinfecting agents for the poultryman because of their poisonous qualities and inflammable nature.

In preceding articles brief reference has been made to lime, sulphur and permanganate of potash as disinfectants, and we will now consider in this what the coal-tar products offer us of value. Bituminous coal subjected to dry distillation, besides the incondensible gases used for lighting and heating purposes and the charcoal remaining as coke, yields a dark, thick liquid known as

Coal or Gas Tar:—This prior to 1836 was considered only as waste and a refuse embarrassing to get rid of by gas and coke manufacturers. In that year, however, a chemist by the name of Runge gave the world a product from this waste material, which he named carbolic acid, and in no succeeding year have the wizards of commercial chemistry failed to give to the arts, industry and medicine new and wondrous products from this same source.

Indeed, what chemists have been able to isolate and develop from the ill-smelling, oily fluid known as coal tar is one of the Seven Wonders of a wonderful age. Perfume sweeter than the roses of Sharon, dyes "that in the colors of the rainbow live and play in the sunset clouds," flavors that rival those obtained from natural fruits and flowers and remedial agents that have proved blessings or curses, as they are used or abused. Not

only columns but pages would be required for me to even enumerate the varied, valuable and curious products that lay concealed and unsuspected in waste coal tar until science called them forth, but of them all none are of more every day value to poultrymen than the first born, named by the pioneer investigator carbolic acid.

It is very evident from the foregoing that the humble coal tar is not only an exceedingly complex mixture chemically, but has proved that it is far from a "waste product," for even after the "aromatic hydrocarbons" embracing the benzene series (not benzine, which is a petroleum product), napthaline and phenols have been isolated by distillation, the "pitch" remaining has given us roofing and paving material, lampblack, shoe blacking, printing inks, etc.

Carbolic acid is a phenol, hence is sometimes called "phenol": it is not, however, a true acid, but is more nearly related to the alcohols. As first obtained from the tar it is a reddish-brown oily liquid and consists of phenols, cresols and hydro-carbons in varying proportions. This is the commercial "impure or crude carbolic acid" and is the product I desire to recommend to poultrymen as equally efficient as a disinfectant as the pure carbolic acid, less dangerous in use and many times cheaper.

Pure carbolic acid is obtained by repeated distillations of the "crude" until deprived of all the cresol content, and pure cresol should contain no phenol or carbolic acid, but the commercial or crude forms of each have many constituents in common and serve equally well the same purpose as disinfectants and antiseptics. In fact, much of the commercial cresol is identical with crude carbolic acid.

The selling price of the crude carbolic acid varies greatly according to its guaranteed phenol content: the strength generally carried by retail druggists is from 20 to 25 per cent and the selling price about 25 cents a quart.

Pure carbolic acid in liquid form, applied undiluted to the skin, causes a sharp pain, followed by numbness and a whitening of the cuticle. In contact with the mucous membrane, its action is the same. Given internally or applied externally *in excess*, it is a most fatal, rapid acting poison.

The "crude" has the same qualities, though of course to a lesser degree, and hence is not a safe *internal* remedy and its use *on the fowl* undiluted or in strong solution is not without danger. Its most important function as a therapeutic and sanative agent is its destructive influence over the lower grades of organic life, both animal and vegetable.

Chlorine, bromine and permanganate of potash are more powerful than carbolic acid in disguising the odors of putrefaction, but the action of the acid is upon *the cause* and not *the effect*. Offensive animal matter in the presence of carbolic acid ceases to smell because it *ceases to putrify:* the organisms of decay are destroyed, whereas the former drugs must be continually present to suppress the fetid exhalations and the decomposition continues. Hence in so far as "prevention is better than a cure," carbolic acid and its combinations take first rank as disinfectants.

As crude carbolic acid and commercial cresol are only slightly soluble in water, it is essential that one should know available and economical solvents or vehicles for its dilution and use. One of these in general use is common coal oil or kerosene: one pint of crude carbolic dissolved in one gallon of kerosene and used as a spray is a most effective mixture for the elimination of the red mites, but it is too powerful a combination and too corrosive in its action to use *on your birds*, young or old, and even the strong fumes from the *recent* application to roosts and nests is far from beneficial. I do not consider kerosene a *dilutant*, but an *accelerator* used as a solvent for carbolic acid.

Although carbolic acid does not readily mix with water, by the addition of potash or resin soaps it will unite with water in all proportions, forming a milky emulsion.

Not necessarily "more uniform" in the "making," for it is by no means a difficult or complicated operation, but different lots of crude carbolic or cresol may and do vary greatly in strength and constituents, hence your finished home product will not always be a duplicate of the former "batch." But, after all, with a disinfectant *for external use only*, slight variations are no material handicap, and if you desire to make your own carbolic soap here's the how:

Procure a pound tin of concentrated lye, 3 quarts of raw linseed oil and 2 gallons of crude carbolic acid. Dissolve the dye in a small quantity of water: give it time to dissolve so as to use as little water as possible, and while you are waiting hunt up a five-gallon stone crock with a wide mouth and whittle out a stirring paddle. Pour the oil in the crock and very slowly add the lye solution, stirring constantly. Keep on stirring until you have a smooth liquid soap: then gradually add the acid, keeping your paddle on the move until the resulting liquid is a clear dark brown. This will mix in any proportion with water. Two or three tablespoonfuls to a gallon of water is about the strength for use with sprayer or brush for general disinfecting purposes. In disinfecting brooders, incubators and utensils that have been exposed to infection of any germ disease, twice the above quantity of "soap" should be used.

Carbolized Petrolatum:—Next to its importance as a disinfectant in liquid form, carbolic acid in the form of an ointment offers the poultryman the greatest utility. The official carbolic acid ointment of the drug store is open to two objections: it contains 5 per cent of the pure acid, and hence is most too strong for general poultry purposes and the cost prohibits its free use.

A five-pound tin of carbolized ointment is not an excessive

One of the Poultry Houses on Crede's Sanitary Poultry Yards, 670 Slade Ave., Elgin, Ill., where he raises his superior Silver Campines.

amount for the average poultryman to have on hand: you should be able to buy 5 lbs. of petrolatum (cosmoline) for half a dollar, for the lower grades, unbleached, is far better for your purpose than the so-called "refined." Liquefy it in a kettle over a gentle heat and add very gradually 5 liquid ounces of crude carbolic acid, stirring constantly. Remove from fire and continue stirring until cold and again semi-solid. Assuming that your crude acid did not exceed the grade known as 25 per cent, you can use this ointment freely on or about your fowls with no ill results and with great benefit. It should clean up the scaly-legs, kill off the depluming mite, rid the chick of head lice and, rubbed into vent fluff, put to rout the body lice of hen and cock. It is also of use in chickenpox to clean up the scabs and ulcers. And should you have a hen torn by the male, applied to the lacerated surface after the wound has been cleaned will prove a satisfactory healing salve. Aside from its own intrinsic value, this ointment offers a most desirable "base" for the application of other desired drugs in ointment form.

I frequently note lard recommended for a base for home-made salves. It is not good advice, for lard is by no means always free from disease germs, but even when sweet and sterile when first used, exposed to the air absorbs oxygen and becomes rancid. And rancid lard not only irritates the skin but may exercise injurious reactions on substances with which it is mixed. Petrolatum being a mineral grease instead of an animal fat, is free from this menace of rancidity, and when carbolized offers not only an ideal sanitary but also an antiseptic base for all ointments or salves in which there is no ingredient incompatible with carbolic acid.

If your carbolized petrolatum does not give entire satisfaction as an insecticide, if any form of parasite survives its contact, you can easily reinforce its potency as follows:

Free from all lumps and reduce to the finest powder one-half an ounce of flowers of sulphur and work it thoroughly into four ounces of your carbolic ointment.

You can call this your "sulpho-carbolate salve," and I am very sure you will find it superior in results to the highly extolled sulpho-carbolate of zinc as a dressing for ulcerated tissue and membrane, and far easier to keep "on hand" and apply.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

The War in Europe.

AT the present writing, no one can safely predict the duration or the final outcome of the deplorable and catastrophic war in Europe. Never before, in our time, has the press of the world been so muzzled by military censorship. Such "news" as filters through the hands of the censors is several days to weeks old when it finally reaches us and has been so mutilated in the transmission that even those competent to read between the lines are simply guessing what the real truth of the situation may be.

When, in the first round of this world's greatest and bloodiest war, the great German fighting machine seemed to be smashing its way to victory, optimistic experts believed that Germany would welcome overtures for peace and that we might hope for a speedy termination of the horrible war. This hope was shattered by the announcement that England, France and Russia had signed a pact not to accept peace on any terms except by mutual consent of the Allies. On all sides this was accepted as meaning a fight to a finish and the inevitable prolongation of the war. Germany, while victorious, might well be believed to welcome peace even at a considerable sacrifice, but Germany fighting against all the great powers of the Old World and what must seem to be national annihilation may be expected to fight it out to the last ditch. The odds are terrific, yet the people of the Fatherland are not of a type that will yield while hope lives. That the war may last a year or even three years seems probable.

Military experts tell us that the supply of ammunition is practically sufficient for a long war, that though the guns become less effective after firing 100 rounds and useless after 400 rounds, there is, even with present unprecedented use, more likelihood of the supply of men giving out before the supply of arms and ammunition is exhausted. Already in all countries concerned men are being drawn into the army who are older and younger than are commonly considered available for military service and we are told that women are cheerfully taking their places in the conduct of the business of peaceful pursuits. W. R. Hearst has ably said editorially:

"Europe is committing hari-kari on the doorsteps of Asia. The civilized nations of Europe are destroying each other and the civilization which they have laboriously constructed through centuries.

"There is no rightful reason for internecine conflict among the defenders of Europe. They should present a united front to external dangers and exercise their combined power against the threat of Asiatic invasion.

"What good will it do England and France and Belgium to weaken Germany and Austria, and thereby weaken their first and chief protection against the invading hordes of Asia?

"What good will it do Germany and Austria to weaken France and Belgium and England, whose aid and whose utmost strength they may at any time need to support themselves in their mighty task of repelling Oriental assault?

"Why should Europe decimate its forces and destroy its own power, when at any time its whole force and its full power and its united effort may be needed in a supreme struggle to rescue the civilization of Europe from submersion in an overwhelming flood of barbarism?

"'Let us have peace,' and let this great American nation exercise its power and influence in behalf of humanity and human progress."

By all means 'let us have peace." Already throughout the Americas there is a mighty movement to help secure the peace of the World, but it must be peace secured by good example and gentle persuasion. Though the United States is the only great world power that has not been drawn into the great war, it cannot compel peace by force. In a sense the war in Europe is a family quarrel brought on by fear, militarism, commercial jealousy and hatred. It is well known what happens to the peacemaker who interferes forcibly in family troubles. We can urge our kindly offices and good will in hope of speedy settlement of the differences of the warring nations, but we should not permit ourselves to be drawn into the war or to take sides with any of the combatants. We can deeply sympathize with all of the nations involved in the terrible struggle, but we must remain a great united and neutral world power. We have no right to entertain or express partisan sentiments. All America should strive for the great and honorable peace of the whole world.

In these stirring times it is a great blessing to be just a plain citizen of the United States of America. We who are so blessed and live in this great land of peace and plenty can scarcely realize the titanic struggle that is going on on the other side of the world. After the first "nine days wonder" at the calamity which has overtaken European civilization, the big black headlines in the "war extras" of our newspapers lose somewhat of their power to thrill, excite and alarm us. We deplore the awful conflict of nations, but we are thankful to be citizens of the only really great neutral world power and we hope to continue at peace with the rest of the world. We all go about our business as if the war did not exist, but we should not permit ourselves to become apathetic. We owe an obligation to the rest of the civilized world to strive for the peace of all nations. We owe a great obligation to ourselves to make the most of the opportunity which the European calamity has thrust upon us.

Never before in the history of the

world has the United States had a greater opportunity for commercial supremacy and success. At the beginning of this great world war we were entering upon an era of business prosperity after several years of severe depression. We had made many national mistakes, which the war has made more clear to us; some of these have been rectified and all may be mended. We are again developing a much needed merchant marine and will again take our proper place on the high seas as a great maritime nation. South America is knocking at our door in hope of establishing commercial relations with us to replace those lost with warring Europe. The opportunity here opened seems unlimited and we should strive to make the most of it.

All of the warring nations have shown profound respect for the United States and are seeking our friendly offices, the flag of our country has been honored as never before. The world needs our friendship and it needs American products, particularly American foodstuffs. Of the nations at war Russia is probably the only one that can supply, of itself, the necessaries of life. So great and terrible a war brings commerce to a standstill for all the warring nations, and production practically ceases.

Whether peace comes soon or late all Europe must remain in an unstable and unsettled condition for a long time to come. It will take a long time to reestablish production and manufacture in the war zone. Meanwhile the people must live, must have food and other supplies. In our United States we have "bumper food crops" better than ever before; our manufacturers are waking up to their opportunities. We have the goods to sell, we will soon have the ships to transport our goods and the markets of the whole world are eager to buy. For a long time we have been depending on European countries for raw and manufactured materials that can be developed or produced in our own land. Everyone should strive to make the most of our great opportunity and to make the words "Produced in (or made in) the United States" the mark of superior quality throughout the world.

Strive for and welcome world peace. Work unitedly and whole heartedly, your level best—everyone at the work he can do best—for the Progress and Prosperity of the great United States of America.

"See America First." Spend your money in America. Devote yourself to America, the development, production and sale of American produce and manufactures. The slogan of this magazine should become that of our whole united people in the Western World:

"We Lead, Others Follow!"

———o———

A Word With You, Mr. Fancier.

FOR the past two and perhaps three seasons you have been a bit discouraged, have you not, Mr. Fancier, with what you have considered lean business years? You have blamed about everything from day-old-chicks to the poultry press for the slack business, but you have failed to put the blame where it belongs.

Some of the fault has been in general business depression all over the world, but that wasn't the whole trouble. Some was due to extravagant advertising claims that you failed to live up to, but that was only a small part of the trouble. Some of it was due to many other causes. But the chief fault has been in your own failure to keep pace with modern times and modern business methods. In these days of hot competition you can't sit complaisantly in your easy chair and look at your frame full of blue ribbons and wait for business to come to you. To get business nowadays, you must get out and hustle for it and, when you do make sales, you *must deliver the goods.*

The time has gone by when a man can successfully build up a trade in fancy poultry pleasing only himself if

SILVER KING I.

1st cock, Coliseum, Chicago, 1912; 1st old pen, Coliseum, Chicago, 1913; sire of ten prize-winning cockerels and pullets at Coliseum, Chicago, 1913. Owned and exhibited by Frank E. Hering, South Bend, Ind. Made from retouched photo.

by imagining that any old bird out of his blue-ribbon-blood-lines is worth any price that he pleases to ask for it. The buying public has a better idea of poultry values nowadays than it had a dozen years ago. They have come to expect better birds and to also count values by the work that the birds perform in their care. A lasting business, where customers come back each year for more, can be built up by satisfying customers, by delivering good goods and good values. There was a time in the poultry business when apparently "a new sucker was born every minute," and some few men seemed to do business with that understanding. Happily that time has been swallowed up in the past and it won't return.

There are good times coming, Mr. Fancier, but they will not be times for inflated values and inflated prices. Really first quality specimens of standard-bred stock and eggs for hatching that can be depended upon to produce quality chicks are going to be in good demand at good profit paying prices. Breeders that can supply quality birds guaranteed to win at certain shows can secure just as big prices as such winners are worth. But, for goodness sake, when you sell such a bird to win, and it does win, don't seek to steal the advertising value of that winning from the man who bought the bird by claiming it as bred in your yards,—the purchaser of that winner is entitled to all the advertising value that he paid for.

We look for big opportunities in export trade for all breeders of American Standard-bred poultry who work to get such business and who keep themselves before the public in attractive, well-worded, honest advertisements. American poultry is going to have the call among the fanciers of the world. It is a big field and a great big opportunity for developing it. Go after the trade as you would after any legitimate business. Try to satisfy every customer. Be honest with him and with yourself. Deliver the best value and the best quality you possibly can at the price. Endeavor to so please your customers that they will want to trade with you again and strive to keep them coming back for more of your stock, chicks and eggs, season after season. Make honest goods, honest values and honest dealing, the slogan of your business and live up to it. Handle your correspondence promptly, curteously, neatly and in as good taste as you know how. Remember in dealing with customers in foreign lands to endeavor to word your letters even more courteously than is customary in business letters in the States. It is customary and it is expected. "Molasses catches more flies than vinegar" and the commonly used brusk methods of letter writing adopted by some Americans in business don't go down well with foreign correspondents. They are used to what we may perhaps consider rather extravagant courtesy. Don't wait for business to come to you, go after the business!

We recently talked with an advertiser who complained of poor business. It developed that he had been fairly swamped by inquiries in response to his ad and that these inquiries when compared with his total expense for advertising actually cost him only one cent each. He had contented himself with answering them with a brief printed circular and let it go at that. There had been no attempt to send out "follow up letters" well-worded to bring in business. He had made sales and a small return above advertising expense, but was discouraged with the poor business. The poor business was all his own fault. All any ad can do is get inquiries. The advertiser must use these inquiries as a basis on which to go after business. This man got his big list of interested names at the small cost of one cent each, but he lacked sufficient business enterprise to work that list for all it was worth. He was afraid to spend the necessary amount to get a real business drawing letter into the hands of each inquirer and for that reason he lost out on what should have proved an unusually good business for the season. A more up-to-date man would have realized a good profit out of that list of inquiries even had the cost per name been twenty times as much. Maybe you can find a lesson there.

Get busy, Mr. Fancier, we believe that we have seen the end of the ebb tide in lean business and business depression; the flood tide of Prosperity is on its way in. Launch your business craft, spin your motor and do your utmost in the great race for success and better business in Standard-bred poultry that is now open to all American breeders. We know YOU can produce the goods, we will be glad to help you to find customers, and we are sure that you will do your level best to deliver honest quality at fair prices.

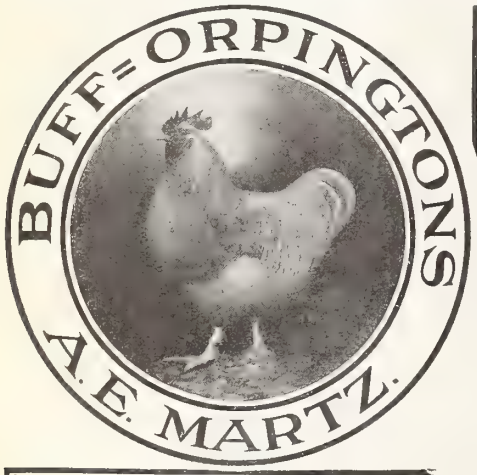
Making a Start with Poultry.

RIGHT now is a good time to make a start in poultry keeping. Breeders are offering surplus stock birds at attractive prices. It is a good time to buy early hatched pullets and yearling hens. In going about the country we have found quite a few poultry keepers who are reducing the size of their flocks because they feel timid about war time conditions and the increasing price of feeding grains. They are offering good sound birds at practically their meat value. It is a good time to buy.

We don't feel the least bit worried about the future of the poultry business. The timid poultry keeper's loss is pretty certain to be the buyer's gain. We don't advise everybody who has a back lot to buy a few hens and go into poultry keeping. The man or woman who has no fondness for and no particular interest in poultry should let the poultry business alone. But we do believe that, now, this fall, is a very good time for everybody who has a real interest in poultry to make room for and keep as many laying fowls as they can comfortably accommodate.

There are few families so situated that they cannot profitably keep a small flock for the purpose of supplying eggs and meat for the family table. It does not call for much room and the necessary outlay is small. Even with high prices for grain, the eggs cost less than those purchased at the store and are better. The small flock poultry keeper does not have to worry about the cost of poultry foods, he uses only a small quantity and he can utilize a good deal of waste from the family table. Chickens bought in the fall can be profitably kept and plumped for the family table at small cost as compared with other meats and we have developed a decided preference for home killed meat. The larger proportion of the meat that goes on to the editor's table is chicken or fowl. With round steak selling at 30 cents a pound and porterhouse steak at 75 cents a pound (and not very good at that) we are not taking much interest in beef. Lamb and pork are correspondingly high and we use them but seldom and only for variety's sake. Poultry in some form, fish and game in season, we find afford abundant variety and at small cost as compared with supplies bought at market prices. Poultry and eggs can be prepared for the table in so many different ways by a good cook that one does not tire of the food quickly.

If you like or think you like poultry keeping, by all means try a flock this fall of such size as you can conveniently and properly care for. You will find that it pays you in spite of the war prices. If you have no liking for fowls and don't care to see them about, then we advise you to let them alone.



When you buy, get good large early pullets or well conditioned yearlings. It is a good time to buy now and the price is as low as it is likely to be for some time to come. Portable houses and runs are very convenient for small flocks and there are many good ones now offered at reasonable prices.

The small flock poultry keeper will not find it necessary or advisable to lay in a large stock of grain. It is better to take a chance on fluctuations in market prices than to risk the losses where storage conditions are not specially adapted to keeping grain in large quantities. The large flock poultry keeper, who has a good grain house, will find it a good plan to watch the market for favorable buying opportunities. There is an abundance of wheat and corn in the country and, even if the war is long continued, we don't look for prices of foodstuffs to become prohibitive or to continue long at a very high mark.

It behooves everybody, so situated and so dispositioned that he can do so to advantage, to keep the family larder well stocked and to plan to grow plenty of good poultry meat, eggs and garden truck at home during the coming season. Home grown foods can't be cornered by the trusts and such foods are at hand when needed and you know how good they are. The production of table supplies at home is considered so important nowadays that a big manufacturing plant near us, seeking to get the greatest efficiency from its employees, rents at practically cost to its married men a neat modern cottage, land enough for a garden and actually provides a poultry house if requested. Each year this concern encourages and helps to hold on its grounds an agricultural fair and poultry show where cash prizes are offered by the firm. There is no entry fee and all employees can compete. The exhibit of Standard-bred poultry is always a good one and is improving each season. The exhibits of vegetables and fruits grown on these small home lots are wonderfully fine and prove a practical demonstration of what can be done by anyone, who has the will and a small town lot, toward supplying good home grown food for the family table. Then there are exhibits of cooked foods, of home canned goods, of sewing and of fancy work. This firm has found that it pays to encourage its employees to help themselves. It encourages them to make their homes productive and it also provides them with opportunities for healthful play and amusement. Then also there is a library and reading room with opportunities for study and advancement. The single workers of both sexes are also well looked out for and there is a refectory where good food can be had at moderate cost.

This company finds that it pays to encourage poultry keeping among its employees. The workers find that poultry keeping pays them and their interest is very great. If it pays a great manufacturing concern to encourage its workers in the home production of poultry and eggs, it should prove a good thing also for other families everywhere that there is interest in poultry. These workers make it pay and get both pleasure and profit out of their poultry. You can do the same if you are sufficiently interested.

Don't let hard times worry you. Home poultry makes its very best showing in "hard times," that is just when the home poultry and eggs show up to advantage. Worry and fretting about hard times and future troubles never does any good. Most of the troubles never happen anyway. This is a great big country, a good land to live in, and it is now blessed with some of the biggest food crops ever known. We live in a land of plenty, a good land to make money in and a good land to spend money in. There is an abundance for everybody who will get out and hustle for it. There are no real necessaries that we must have from foreign lands. It is a good time to develop our own resources and to do business with our own big people. "Made in U.S.A."

will take on a new meaning from now on and "Buy in the U.S.A." is a mighty good motto to tie to.

If you are interested in poultry, get busy. You will never find any better opportunity. Success will come if you work hard for it. Don't "plunge," that is never wise. Go in sanely and sensibly with the determination to win.

———o———

Opportunity Is Knocking.

FRIEND Everypoultryman: *Opportunity* is knocking at your door. See that you seize and hold her now and that you make the most of your individual opportunity.

The present international situation is bound to create big opportunities for bigger and better business for every wide awake American who gets busy now and stays on his job. The outlook was never before better for poultrymen. Forget the depression and thin business of the few years just past and put your whole mind into fattening your income out of the good times that are now surely coming. We look for a stable and steady increase in all legitimate business.

If war conditions in Europe are only half as bad as pictured in the daily newspapers, (and the chances are that they are decidedly worse than we are able to comprehend) then there soon will be a great depletion of poultry and poultry products on the other side of the Atlantic. Imports are bound to be a negligible quantity in the poultry business of this country for some time to come and there will be a big demand for poultry and eggs for export.

Whatever the outcome of the great conflict of nations there is going to be a big demand for American standard-bred poultry. The fancier who is alive to his opportunities, in these strenuous times, will put past troubles well behind him, forget them, and get out and hustle for his share of the better and bigger business that is to come. The man who can and will deliver the goods can bank on getting results. Already fanciers in South America are reaching out to the fanciers of the United States for more and better poultry. There will be found a big and almost immediate market. There are other foreign markets that are bound to develop and before we have fairly begun to develop our poultry business in this direction we will find that all Europe is seeking American thoroughbred poultry.

In the light of present day conditions this may seem unduly optimistic, but we believe that it is bound to come. It is true that war conditions have temporarily cut down the demand for market poultry and eggs for the supply of ocean-going steamships, but that condition is bound to be speedily remedied in the demand for supplies for ships of American registry and for other ships that are resuming their customary lines of communication. In any event, the demand for poultry and eggs has suffered no important setback and prices are holding a bit above the usual average for this season of the year.

It is also true that speculators, in and out of our exchanges, have boosted the prices of grain and other commodities. If the producer can have the benefit of the increase in price, it is just possible that we can well stand a somewhat increased price for grain. In some sections and for some time the producer has not had as good a return as he should have had for the staple grains. Poultry and egg prices have always, apparently, been the last among foodstuffs to get the benefit of increased prices. We believe the time is soon coming when poultry and eggs will net the producer better prices that are more consistent with the cost of production.

Such prices of the necessaries of life as have been boosted and inflated by speculators and greedy dealers are bound to be regulated and adjusted within a reasonable time. If we get busy and keep busy there is no occasion for worry about the high cost of living or the high cost of grain and supplies. Our Federal Government is turning its investigators loose in the arena and we can safely trust to our Uncle Samuel, if properly boosted, to secure some sane adjustment of prices whereby both producer and consumer will benefit and the greedy middlemen will be obliged to be satisfied with less and more wholesome profits. Either that or our good Uncle Sam is likely to take charge of foodstuff distribution and price regulation. The trend of the times is that way.

Get busy, Mr. Everypoultryman! Get right on to your job and stay there. Winter all the good sound vigorous laying and breeding stock that you can care for comfortably and well, and get out and hustle for business. Don't let any "hard war times" bogey scare you out of business. Don't sacrifice your big, husky early pullets just because money seems tight and grain prices are high. Winter all the profitable birds that you can feed well and properly care for. There are good times coming for you and there will be good prices and a good demand for first quality new laid eggs. There will be enough weak-kneed, timid individuals who will be frightened into disposing of, or thinning down, their flocks this fall and who will be sorry for it before spring comes again. Don't join the ranks of the timid ones. Better take advantage of the situation and buy up such good early pullets as are offered by them at attractive prices. The editor who writes this, is convinced that opportunity is now knocking at the door of every American poultryman and he is so sure of it that he intends to winter every promising bird he now has and can properly care for in addition to his editorial duties. We are not looking for any big boom in the poultry business or for extraordinary profits, but we are expecting considerable improvement in legitimate business conditions. Therefore we say again to you Mr. Everypoultryman:

Get busy! Keep your business up to full capacity. Keep your courage up. Boost more and better American poultry

RED SUSSEX **RHODE ISLAND REDS** GOLDEN CAMPINES

CARVER'S RED FARMS, First Big Win of the Season, at the Great Forest City Exposition, Cleveland, the Hagerstown of the Middle West, 3,500 birds. Crusader III, a Boston Winner

Regal Supremacy

At the New York State Fair, September 1st to 6th, 1914

For the ninth time Martin's Regal White Wyandottes prove themselves invincible. In the keenest kind of competition they won under Judge Chas. D. Cleveland:

COCKS, 1, 2, 3, 4	**HENS, 1, 2, 3**
COCKERELS, 1, 2, 3, 4, 5	**PULLETS, 1, 3, 4, 5**
PENS (YOUNG) 1, 3, 4	**PENS (OLD) 2, 3, 4**

National White Wyandotte Club Cup, Best Cock, Hen, Cockerel, Pullet and Pen.
Poultry Success Cup for Best Display.
Rancocas Cup for Best Ten Wyandottes, any variety,
$25.00 in Gold for Best Display.

Judges and Breeders agree that never had such a string of White Wyandottes been shown by any other breeder. In a string of 50 birds, 46 were under ribbons, showing the wonderful uniformity of type running through my flock. In nine years' showing at this Fair my birds have won 47 Blue Ribbons out of a possible 54. Why not make a start with the Regal Strain? No other strain combines utility and exhibition qualities to such a marked degree.

1000 MATURED COCKERELS AND PULLETS ready to go into the show room now.
1500 COCKS AND HENS to select show birds and breeding stock from.

JOHN S. MARTIN, Box 51, PORT DOVER, CANADA

for all you are worth and strive hard to get your full share in the good times that are as certain to come as the sun is to rise in the morning.

———o———

The Show Season.

THE 1914-15 poultry show season, already begun, promises well and is to last longer than usual. One of the biggest shows of the East, that at Madison Square Garden, New York, has dates for February 12th to 16th, 1915.

The fall fairs thus far have been well attended, the exhibits for the most part have been good and there is plenty of good live interest in Standard-bred poultry. It should prove an interesting and good show season from all viewpoints. You, friend Reader, should do your part to make it so. Plan to test the merit of your birds this season in competition with your fellow breeders. It is good for you, good for them and good for the business. Be sure to attend your local show and the nearest big show. You will find much of interest and something worth learning. Your personal attendance helps you and it helps the show. There is no better way to show your patriotism as an American citizen than by getting into close personal touch with your home poultry association and the nearest poultry shows which are boosting the industry in which you are intimately interested.

There is no better time than the present to boost home industries and to lend your personal encouragement to exhibitions of American Standard-bred poultry. Besides the good fellowship and good sportsmanship that makes the shows worth while, you will find opportunities for more and better business. The show is a good place to meet people and to make friends. Wherever you meet people and make friends, there you help to make better business.

Boost Standard-bred poultry. Boost the poultry shows. Do your level best to boost the great poultry industry in America.

DR. WOODS' NOTES AND COMMENT.

One of the hot air orators at the Chicago Convention of the American Poultry Association made a very effective gallery play that won much boisterous applause, stamping of feet and whistling calls, by everlasting slamming the critics of the association. Sweet music for his ears no doubt, but less of value than applause at other forms of vaudeville entertainment. Some folks can't stand even sincere and helpful criticism, they require feeding on titbits of sloppy flattery that appeals to ego and to vanity. But bullying and bellicose arguments seldom go far or win any great amount of respect. Of what good is praise that seeks gain for the one who praises or of flattery that is used in hope of favor or through fear? 'Tis said that no one ever told an Emperor the truth though he be known to be riding to a fall.

* * *

It is easy to criticise, perhaps, more easy some say than to profit by the experience of others. Yet sincere and honest criticism more often may come from a friend than from an enemy.

Constructive criticism, that points out an error and a way to remedy it, is often very helpful, though sometimes not gracefully accepted. The critic may be one's best friend since he thinks enough of one to give time to criticism, which is always a thankless job. While criticism may cause irritation of a thin skin, nevertheless it may do one good to take heed and profit by it. So let's not be over hasty in consigning the critics to eternal damnation, even though we may find playing to the gallery amusing. It might be better to welcome all criticism and try to profit by it, rather than to guess wrong so many more times than one guesses right. The man who makes the loudest noise with his mouth and the most hysterical gesticulation is not necessarily the man who best uses his brains. The clever magician proves to you that the "quickness of the hands deceives the eyes" and those who attend association meetings may find that popularly noisy oratory often deludes the voter.

* * *

Charles McAlister, of Seattle, says of Mrs. Woods' "Impressions of the Chicago Convention" in September A. P. J. that: "It is certainly a gem and will remain one of the classics of poultry literature of modern times. I have cut and pasted it into my scrap book, and in doing so could not resist the desire to express to you my appreciation." We liked it pretty well ourself when she handed us the copy to send to the printer. From comment received to date it evidently touched a responsive chord with many A. P. A. members.

* * *

If those who promote militarism and declare war were only obliged to take first place in the firing line at the front on the first call, then we might expect a long and great peace. It is a great pity that those who make war, and throw thousands of willing and obedient men into the jaws of death, always seem to suffer the least from the awful consequences. Dr. Crane says:

"War is a diversion; it distracts public attention from the workers' efforts to gain their rights. The war spirit is always reactionary. Many a war in history has been engineered by the rulers in order to divert the common people from demanding their rights. Peace is essential to progress. War means the triumph of the mossback."

* * *

Civilization has reached a sorry plight of hysterical nervous tension when nations, that have for generations led in peaceful arts and science, turn barbarians to rend and kill the very flower of their manhood and potential progress. Men and their mentality can be put to much better use than being made butchers' meat for sword and gun. Think of the power for thought and research in the arts and sciences that has been murdered since the war began, and strive for peace.

* * *

More than 560 years ago a great Oriental plague, known as the "black death," desolated the world. It came out of the East and swept rapidly through Europe and Britain. It is said that the loss of life in Europe alone numbered more than twenty-five million souls. Now in the twentieth-century, when we believed that a higher value had been placed upon human life and human endeavor and that through

D. W. YOUNG - - - MONROE, N. Y.

science we are beginning to get the upper hand of death-dealing disease, we find the most advanced civilized peoples of the Eastern world trying to destroy one another by throwing millions of men into the furnace of war, each nation praying for Divine help in its work of murder and depopulation. We can't reconcile our ideas of Divinity with prayers for victory in wholesale murder of brother men by fire and sword, but there is no blasphemy and should be much hope in prayers for Peace.

* * *

A gentleman we dined with during the Chicago convention said of the European war that his sympathies were very much perplexed, for he would like to see Germany, England, Belgium and France all victorious, and he could see no way that it could be brought about. We feel a good bit that way ourself, for we have friends in all the countries involved and would be glad to see peaceful relations established and some assurance that there will be no similar trouble in the future. We can't see any glory or honor in war and only a useless waste of courage and bravery. There is a heap more honor and glory in endeavoring to produce more and better food with which to feed the people. While we can't and don't want to get away from the news of the day, let's put our best efforts into producing more and better poultry and eggs. It is a good time to get busy with poultry.

* * *

A beef scrap manufacturer complains that comment and analyses we have published has injured the scrap business. If so, it is the manufacturers' own fault. We have no complaint to make about good, wholesome beef scrap for poultry feeding at a reasonable price, but we find such difficult to obtain. We believe that we have done much to help create the demand for good beef scrap. We still believe that good, sweet, wholesome beef scrap is one of the best obtainable meat foods for poultry of all ages. But, we don't believe in commending the sale of poisonous, stinking waste, that is positively dangerous to feed to poultry, and for which we are asked to pay 2½ to 3½ cents a pound. We have seen scrap fed that was so foul that it tainted the flavor of the eggs. Poultry growers generally, and large plant poultrymen in particular, would welcome knowledge of a constant source of supply of dependable, wholesome beef scrap that will run fairly uniform in quality. Everywhere we hear the complaint that good scrap is difficult to obtain. In fact, really good beef scrap is becoming so hard to get that a good many poultry keepers are turning to the best grades of fish scrap as a substitute.

A fish scrap manufacturer recently told us that he could sell many tons more scrap than he can now produce if he would take the chance of using poorer material, increase his product and put out cheaper and inferior goods. He said that he had built up his business on the production and delivery of only first quality goods and that he intends to hold his business by continuing to supply only first quality goods. He does not consider it good business to increase his output and cheapen his product for the sake of temporary increase in sales and profits. He prefers to keep right on doing business with satisfied customers.

If manufacturers of beef scrap would stop using unfit meat, stop using poisonous drugs and chemicals to preserve the bad meat, and stop filling up the scrap with ground hoof, wool, hair, bristles, chunks of wooden skewers, dirt, small stones, and even cotton seed waste, and would put out a clean wholesome scrap that will not injure or kill chicks or fowls, it would be a whole lot better for the beef scrap business. This isn't "knocking" it, it is friendly and constructive criticism. Look after the quality, Mr. Manufacturer, deliver good goods that are wholesome and possess full feeding values, and you'll have no complaint about bad business just because we try to tell our fellow poultrymen the truth.

* * *

First pullets' eggs on September 3d this year from chicks bought day-old the first week in April. Honors even between White Plymouth Rocks and Rhode Island Reds, laying at five months old, grown on free farm range and fed chiefly on hard grains. These pullets are part of a flock of fifty day-old chicks received from a large commercial hatchery on April 4th. Half were Reds and half White Rocks. They were started

OWEN FARMS

107 William St., Vineyard Haven, Mass.

MAURICE F. DELANO, Prop. FRANK H. DAVEY, Supt.

in a lamp-heated outdoor brooder, and at the end of three weeks were put in a galvanized iron cold brooder, having a feather hover, and housed in a 3x6 ft. colony coop. The only depletion of this flock has been from cockerels killed for table use. The chicks had no special care, just common farm conditions. The chick food was home ground and after weaning they had mostly cracked corn, oats and wheat. They had very little beef scrap, quite a little scalded fresh fish during the first six weeks, and after that chiefly the bugs and worms found on ample range, for a meat food supply. During the summer the supply of insect life was unusually plentiful, as we suffered by an invasion by army worms and these chicks, in common with about 300 younger birds on the same range, ate army worms so greedily that the entire flock was troubled for several days with decided looseness of the bowels. This adjusted itself by simply letting the chicks alone and allowing appetite to control the situation. The eggs from these five months old pullets are of good shape and color, though rather small. The pullets show good Standard quality and some of the cockerels are extra good.

* * *

Milk, sweet or sour, is good poultry food, provided it is good milk to start with and is properly fed. Sour milk is not a preventive or a "cure all" for infectious diarrhoeas. Free use of milk, always before the birds as a drink, commonly causes watery looseness of the bowels. Sour milk is more liable to do this than fresh sweet milk. Milk that has gone stale on the city milkman's hands is not good for chickens, neither is milk that sours "ropy" or milk from gargetty cows. We prefer to use sweet whole milk or sweet skim-milk, fresh from the separator, in a moist mash for either chicks or fowls and believe that it spends best when fed that way. Sour milk we prefer to make into curd cheese, by heating the sour milk to separate the curd from the whey. Squeeze the curd as dry as you can before feeding and use the watery whey in the pig slop. Curd cheese can be seasoned with salt and pepper and makes a good animal food ration for all young poultry. Don't believe all you read about the remedial value of sour milk, a great deal depends upon the milk itself and the conditions under which it is fed. The statements made about its use need a great deal of qualification and the benefits have been greatly exaggerated.

* * *

Housing time is at hand. Use a little chicken-sense when you begin to house the young stock. Don't crowd them. Don't shut them up in tight houses. See that they have fresh air in abundance at night when on the roost. Exercise a little patience in encouraging them to use the roosts. Oftentimes the man who cusses "fool chickens" is the bigger fool because he won't bother to look at the matter from the viewpoint of chicken habits.

* * *

When the pullets are brought in from open range, don't let the change in feeding be too abrupt. They ought to be well started on the winter laying ration by the time you house them. Be sure to supply them with an abundance of fresh green food and give them liberal yard room if you can. Range reared pullets if well cared for, at time of housing and thereafter, will respond

wonderfully. The man who has trouble in getting his pullets to lay and who has to fight colds and other sickness at fall housing time is not a good manager. Young stock is more susceptible to fall colds than adult stock, but good housing, plenty of roosting room and good feeding will usually prevent such trouble in spite of severe weather changes.

* * *

At present writing, September 10th, live fowls are selling at 25 cents a pound at the door; good sized chickens at the same price and rangy chickens at from 18 to 20 cents a pound, alive. Eggs are 40 cents a dozen. These prices are low as compared to meats and we look for prices to stiffen. Good fowls are rather scarce and so are big early hatched chickens. Rangy late chickens are rather more plentiful. Wheat is retailing at $2.30 per 100 pounds; corn, $2.16 per two-bushel bag; oats, 65 cents a bushel; cracked corn, $2.04 per 100 pounds. With a bountiful grain crop and little opportunity to export it, we hope for easier prices in feeding grains. The speculators make the prices and get the profits, the producers are not being benefited. When feeding grains drop to more normal prices will be a good time to buy in quantity. It will pay to keep in close touch with the market.

It doesn't pay to buy poor grain. It is poor business to trade with a dealer that handles poor grain, and particularly with one that sells poor grain at good grain prices. There are a good many such. We go a number of miles out of our way to buy grain in order to trade with a man who sells good goods at honest prices. When one buys wheat at present prices he should not get wheat salted with a mixture of other grains of poor and cheaper quality. Insist on good goods and on getting what you pay for. Your poultry business means too much to you for you to permit some unscrupulous dealer to ruin your flock with spoiled grain. Keep your eyes open when you buy and don't be afraid to demand the quality you are paying for.

* * *

Some of our friends among the breeders are much concerned about how the war may affect business relations with our good poultry friends in Canada. While in some doubt as to what may and may not be a breach of strict neutrality, we cannot see what possible difficulty could arise from the interchange of breeding stock and eggs for hatching between the breeders of the United States and Canada. We do not expect and we hope that there will not be any change in our business relations as regards thoroughbred poultry. While Canadians are loyally answering the call of the Mother Country and are going to war, we sincerely hope that the war will not come to Canada. We have sons and daughters of many nations on this great North American continent and we hope that all will always be good fellow Americans.

* * *

Some double headers among the big city poultry shows this season. Buffalo, N. Y., holds the "Greater Buffalo Show" November 23d to 28th, and the "International Show" January 11th to 16th, 1915. Oakland, Cal., holds its show November 24th to 29th, and San Francisco show comes December 8th to 13th. Chicago show has dates for December 12th to 16th and the Chicago Poultry Breeders' Association show comes January 14th to 20th, 1915.

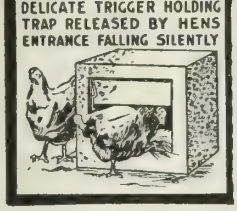
MOE'S SELF LOCKING LEG BAND

Patented Feb. 10, 1903

A sealed band that requires no sealer. Locks simply by pushing it together and it can only be removed by destroying the band. Manufactured out of a bright nickel colored metal that will not rust or corrode. Every band has its own raised or embossed number.

12 Bands 15 Cents. Postage paid. Liberal discount on quantities.

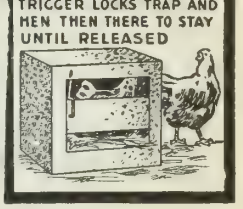
MOE'S NEVER CLOG AND WASTE PROOF HOPPER



Patent Pending

Large in capacity, small in price. Does away with all trouble of feed clogging no matter how coarse. The gradual enlargement of the base will force the feed downward. Rat proof and weather proof when closed. A trial will convince you that it is a hopper of the greatest merit. Manufactured of heavy galvanized iron in three sizes:

No. 35—12 quart capacity		$ .75
" 36—18 "	"	1.00
" 37—36 "	"	1.50



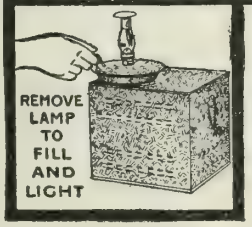
MOE'S NEVER FAIL TRAP NEST

Patent Pending

A solution of all trap nest troubles, for as the name implies it never fails. These traps are lice proof. But one bird can enter at a time. Fully sealed back and sides, but when the hen is trapped she gets plenty of air from above and beneath the trap. The trap is easily removed so that the nest can be used without same and as an ordinary nest. Does away with all trouble in setting up as they are set up and ready for use when shipped. Manufactured of heavy galvanized iron in two sizes:

No. 33—About one foot square, complete..... $ .75
No. 34—12 x 12 x 14½ in. for extra large birds, complete..... 1.50

MOE'S SANITARY POULTRY DRINKING FOUNTAIN



Patented July 11, 1911

Fills from the top. The most popular fountain on the market. The double wall keeps water cool in summer and retards freezing in winter. No valves to get out of order. As easily cleaned as an ordinary pail. The square drinking pan does away with all chances of spilling when hung up. Affords drinking accommodation for two birds at one time. Manufactured in three sizes:

No. 1—1 gallon capacity		$1.25
No. 2—2 "	"	1.75
No. 4—4 "	"	2.25

MOE'S HEATER FOR TOP FILL FOUNTAINS

Makes our top-fill fountains absolutely non-freezing no matter what the weather. Constructed with every precaution against danger of ignition. Simple and safe. So ventilated that the lamp will not blow out in the stormiest weather, but all the time supplying just sufficient heat to prevent the water from freezing. Manufactured of heavy galvanized iron with lamp complete in three sizes:

To fit our No. 1 fountains		$ .75
" " " " 2	"	.85
" " " " 4	"	1.00

If not at your dealers any of the above sent direct on receipt of price. These are only a few of the good things in Moe's line of useful and sanitary poultry supplies. Write for complete catalogue.

Secretary W. B. Atherton announces the big Boston show dates January 12th to 16th, and promises a bigger, better, busier show, with more special features than ever. It will be going some to make good that promise and "Billy" always does make good. Boston show is always a great good fellowship reunion of fanciers from all over the country.

* * *

Secretary Charles D. Cleveland is enthusiastic about the outlook for the Madison Square Garden, New York, show, that, owing to other engagement of the "Garden" will be held later than usual, and comes February 12th to 18th. Personally, these dates please us better than the old dates, which interfered with the Christmas and New Year's home holidays. We look for a big show and for big opportunities for fanciers to do business.

* * *

We always find interesting reading in the "Crested Fowl Breeders' Section," conducted by John A. Gough, in *American Fancier and Stock Keeper*. We note, also, that he frequently succeeds in making the crests bristle for some poultry editors. While not intending to be partisan, we frequently find more to amuse, entertain and instruct us in Gough's grist than in the meanderings of his opponents in controversy. We greatly enjoyed his discussion of "mules" in September 5th issue, and some day we hope he will discourse on the subject of those who serve as "little yellow dogs" for pay.

J. H. Drevenstedt insists that the Cornish fowl belong in the English class,

E. B. Thompson's "Imperial Ringlet" Barred Plymouth Rocks

Are the Greatest Achievement in Modern Barred Rock Breeding. They Are the Product of Over Thirty Years' Skill.

First Prize Cockerel and Champion Male and First Prize Pullet and Champion Female at Madison Square Garden, New York, 1913

Early Winning Show Birds

I now offer the finest early hatched exhibition birds I have ever produced—grand size and shape, fine heads, even clear blue color, and narrow clean cut vivid barring to the skin. They are matchless and ready to win prizes for you in any competition in the world. The prices are very reasonable.

My Imperial "Ringlet" Barred Rocks have demonstrated to all the world a distinctive superiority—they stand without a rival as the leading first prize winners at America's Imperial Show, Madison Square Garden, New York.

A Great Light on the Subject of New York Records

The Imperial "Ringlets," exhibited by me personally, have won at New York a grand total of **32 first prizes**—this is more than double the number ever won by any competitor—no other Barred Rock breeder in the world has ever won more than 13 first prizes in the entire history of the New York show—**mark the difference. Furthermore**—I am the only living Barred Rock breeder who has ever won all the regular and special prizes on pullets at a single New York Show, viz: **1st, 2d, 3d, 4th and 5th;** all the regular and special prizes on cockerels, viz: **1st, 2d, 3d, 4th and 5th** at one show; both Sweepstakes Champion Male and Sweepstakes Champion Female at one and the same show in Madison Square Garden.

These prizes mean something—they sweep away at one stroke all doubts and settle the question of the world's leadership.

(See my ad on back cover page for wonderful record at last winter's Madison Square Garden, 1913-14, Show. This achievement takes rank in history as the most wonderful ever recorded on Barred Rocks since the N. Y. Show was founded.)

If you want to win and breed winners you must have my Imperial "Ringlets"—the best is none too good for my customers. I will sell you grand exhibition birds for any show, and breeders of this richest first prize New York blood in elegant single birds, and trios and pens mated to produce winners.

Richly illustrated 70-page catalogue upon application—it is full of pictures of New York winners from life.

See my other ad on back cover page.

Address E. B. Thompson Lock Box 510, AMENIA, NEW YORK

regardless of any Oriental ancestry, and that the Campine is a Belgian breed, though it may have Dutch ancestors. He argues that they have as much right to such classification as the Wyandotte, with Asiatic and Dutch ancestry, has to a place in the American class. "Drev" is right, no doubt, but men in convention assembled will do just about as they please and not care a continental.

* * *

Henry P. Schwab, in "Chick Chats" gives us a lot of entertaining information concerning matrimony, single blessedness, eugenics and other matters sans chicken, but sometimes we do think that he rubs in just a little "too much mustard." In flitting about from plant to plant and from show to show there is a wealth of opportunity for getting together a big bunch of live all-poultry news—entertaining, stimulating and instructive. Why not "can" some of the condiment?

* * *

Frank L. Platt, in his August article on "The Barred Plymouth Rock—Present and Future," particularly in his comment on judging and the fleeting changes of fashion, appears to have upset a bee hive without the usual precaution of wearing a bee-veil and smoking up the hive first. Therefore, it is not strange that he gets some hot and pointed responses. We read the article in question, and, while there may be some doubt as to its wisdom and the manner of wording opinions, we find nothing in particular to get excited about. After all, it is largely the presentation of personal opinion, which is a privilege of Americans when they publicly father their own expression of same. It is just as well to know what Mr. Platt thinks about it and it may be a good plan to know what others think on the same subject. With so much intense and fine barring, relations seem to be getting a bit strained in Barred Rock alley. Why not arbitrate? We admire winners and like a good fighter, but we have a whole lot of respect for a good loser. What is and is to be interests us a whole lot, but we care mighty little about "what might have been."

* * *

"Are all poultry judges honest?" asks an "earnest reader." Shade of Diogenes, come out with your lantern! You might as well ask, "are all men honest?" Poultry judges are men, most of them, are they not? And a man can be A MAN if he does undertake a thankless job like judging poultry. We believe that all the poultry judges of our personal acquaintance, and that includes quite a number, all do their level best to place the awards where they rightly belong in their best judgment. It's a job we would never covet. A judge could not be dishonest long without getting found out; once found out he couldn't get another job. Under such conditions, even a man with a crooked disposition would try to run straight. We have waste-basketed this question a good many times; now we hope it will lie down and keep quiet. "Earnest Reader," forget it!

* * *

The poultry business has often been referred to as one where close attention to little details is essential to success. 'Tis true in a measure, but if you attend to essential details there are a lot of minor details that you can "let slide." Labor saving is very necessary to success and you can often save much labor by knowing just what you can afford to "let slide." It is not necessary to be always fussing with your flocks. A reasonable amount of "let alone treatment" is good for them and there are a whole lot of flocks that need it. We like always open front houses, because there are no ventilating doors, curtains and windows to fuss with. We like mechanical feeding devices because such machinery saves labor, insures good feeding and saves a lot of bother for the birds and for us. It is a good thing to have a keen eye for petty detail and it is also good to know what need not be done and to just what extent you can let things alone and get the best results. Cultivating hen-sense is a rather profitable pastime for a poultryman. We find frequent and constant interruptions hinder good work. Possibly that is the case with flocks that have to put up with a fussy and over-attentive attendant.

* * *

Frosty nights are here; better get all the houses into shape for winter. There will be plenty to do and much that must be done while the mild Indian summer weather lingers. Be sure to start the season with houses clean and roof leaks stopped. A supply of sand and fine gravel put under cover now will prove a great convenience and source of satisfaction during the coming winter and early spring. Get all in readiness for winter quarters.

S. C. WHITE LEGHORNS

Watson E. Coleman, Patent Lawyer, 622 F St., N. W., Washington, D. C.

Editor American Poultry Journal:

Dear Sir—At last one editor has come to his senses! We are to have a real poultry magazine, one without anchors or strings. One for the poultry reader as well as the breeder.

This free reading notice alone has done a great deal of harm, as the inexperienced take it as an endorsement by the paper publishing it. And what a lot of rot it is, and think of the valuable space it is given.

Unretouched photographs! Why not? Of course the majority of photographs would make a horrible looking picture of our pet or prized bird, as one must be acquainted with the demands, but there are enough poultry photographers and many more will be created when we all insist on the "real thing." It will be a boon to the painstaking photographer and a setback for the careless. Why say there are portrait professionals (?) who would be out of business in two weeks if it were not for the retouchers who really "make" the portrait salable.

And the public, the interested public, will be getting a fairer idea of what to expect. There will be less disappointment where birds are received from orders, as the "ideal" retouched pictures gives one the impression that we must expect to get what purports to be a likeness of the seller's birds.

I am sure that your efforts will be appreciated and that other magazines will fall in line, and in years to come you will be justly rewarded for making such a liberal move for better poultry. May you prosper. Sincerely yours,

Louis R. Murray,
21 Clark St., Ogdensburg, N. Y.

Economy Trap Nest

WHO ROBS CONSUMER AND PRODUCER?

THE following comment and poem were clipped from the Sunday Chronicle, Manchester, England, August 23, 1914. Evidently we are not the only people who suffer from unscrupulous bandits who rob both consumer and producer and boost the cost of foodstuffs for their own profit. The distribution of food products and the fixing of food prices are sadly in need of Government regulation. Read what "Vexatus" has to say about conditions in England:

'We in these islands still happily contrive to keep our bodies and souls together. And there will be no lack of the food supplies which conduce to that end so long as our navy holds dominion of the sea. Unhappily, we have certain mean bodies without souls among us, that, putting profit before patriotism, have waxed fat by the holding back of products and the raising of prices.

"And unless the Government sternly protects us by forcible measures, I fear we are doomed again and again to be fleeced at the slightest opportunity. For the indignant and bewildered consumer finds himself quite unable to corner

The Culprit.

It isn't the innocent grocer
Who collars rich swag from your cup,
Who seizes each crisis
For raising his prices
And sending commodities up.
And though at the cost of your bacon,
And butter, and eggs you may groan,
The butterman's blameless.
This plundering shameless
Is done by some person unknown—
Some person or persons unknown.

It isn't the spotless importer,
It isn't the shippers who ship,
'Tis not the wholesaler,
Nor yet the retailer,
Who grips us with pitiless grip.
These poor stricken victims "lose money,"
And though the consumer may moan,
He learns to his wonder
That all the rich plunder
Is reaped by some person unknown -
Some person or persons unknown.

REPLIES TO MR. HEXT.

IN the August issue of American Poultry Journal, L. P. Hext, of Savannah, Ga., asks the opinions of other breeders as to the advisability of hatching chicks in June. Mr. Hext, wishing to try the experiment of raising June chicks hatched in the North, wrote to two breeders living in practically the same general locality, asking about June hatched chicks. One breeder replied to the effect that he believed June to be the natural hatching time and that he personally had raised some of the finest chicks he had ever owned that were hatched in June. The other breeder said emphatically that June hatched chicks could not be handled profitably. The following replies to Mr. Hext's inquiry have been received:

"My experience with late hatched chicks may prove of interest. In the summer of 1912 I received 200 day-old chicks from a New Jersey breeder and gave them the best of care. The chicks were S. C. W. Leghorns. Ten died the

second day after arrival, eleven on the third day, and twenty on the fourth day. The rest grew slowly through the latter part of June and July, as it was very warm. They did not come into full laying until the latter part of January, but they laid all through the following summer and gave me eggs when the early hatched pullets were in moult.

"This year I have raised two hundred June hatched chicks, the eggs being from my own breeding pens. These chicks have done much better, as they were hatched by hens. I believe if the egg supply is to be kept up during July, August and September in the South, it will be necessary to hatch at least half of the pullets either late in May or in June. J. L. Brown.

"Bagdad, Fla."

"My theory, backed up by experience, in regard to the question asked by Mr. Hext, is that a June hatched Leghorn will lay in Georgia in January if it has been provided with plenty of shade, green food and a variety of foods necessary for proper growth. They will make better layers than earlier chicks for the reason that any old hen will lay in the early spring, but it is a good hen that lays through the summer. Also, the percentage of pullets is usually greater in late hatched chicks.

"I usually keep up hatching until the second week in August, according to when the hens begin to moult. It is a good time to stop then.

"However, if Mr. Hext wants pullets to lay in November, he will have to have them hatched earlier than June. That is asking too much even of a Leghorn. Geo. H. Place.

"Omaha, Neb."

"My experience with pullets hatched July 1 and that were raised by the Cornell University method, and fed according to the Mountain Grove, Mo., first egg-laying contest, is as follows:

"I hatched 457 chicks, being a sixty-five per cent hatch of eggs set, some of the eggs being from hens that averaged 216 eggs each in their pullet year. I lost five chicks. On November 11 I received my first egg, and throughout the winter got a fifty per cent egg yield, and all that I have left of the flock are at it yet (Aug. 8), though some of them are beginning to moult.

"Flint, Mich. C. M. Dutcher."

We recently enjoyed a very pleasant visit from O. W. Aldrich, the senior member of the Aldrich Poultry Farm, Columbus, Ohio. Mr. Aldrich is a veteran of the Civil war and recently was elected national commander of the Union Veteran Legion, an organization to which no member is eligible unless he served two years or more in the Union army during the Civil war. For the past two years Mr. Aldrich has been judge-advocate general of this organization. For a great many years he has been very prominent in organizations of this character in the state of Ohio, and is one of the most prominent veterans of the Civil war. He has also been president of Society of the Sons of the Revolution and president of the Society of the War of 1812. During his visit to Chicago, he attended the meetings of the Supreme Council of the Scottish-Rite Masons. Mr. Aldrich is an enthusiastic fancier and firm believer in the future of Single Comb White Orpingtons. He informed us that their young stock this season is fully twenty-five per cent better than last year, and that it was their intention to keep on improving their strain until they are as perfect as it is possible to produce them.

IMPORTANT.

In answering advertisements, our subscribers should take particular pains to write their names and addresses plainly and make it plain just what way they desire their goods shipped. This will prevent delays, errors and misunderstandings. In all cases please mention American Poultry Journal.

INTERNATIONAL EGG LAYING CONTEST.

PERHAPS the most interesting development in the egg laying contest at Storrs for the month of August was the fact that an American pen of White Leghorns owned by Francis F. Lincoln of Mt. Carmel, Conn., passed the English White Wyandottes and is now leading them by a margin of 21 eggs. The performance of this Connecticut pen of Leghorns is particularly interesting on account of the fact that Barron's birds have indiscriminately led all of the American egg laying contests since their inception three years ago. As is likely to happen, of course, to any breeder he has in one or two cases suffered the loss of a bird at a critical moment and has thus been thrown out of the race. In general, however, his birds have performed so well that many poultry breeders have conceded that it was not worth while to enter a competition with the expectation of winning if Barron's birds were in the same competition. Hence the Agricultural College at Storrs is particularly pleased to record the fact that a pen of birds reared in its own state is able to produce as many eggs as birds that come to us from England. In other words it is not believed that the Englishman

I. K. Felch, Box 176, Natick, Massachusetts

has any corner on the matter of producing hens that will lay eggs. There are just as good breeders in the state who need only to exercise perhaps a little additional care in the matter of selection, feeding, and breeding, in order to be able to successfully compete with birds from abroad.

A good deal has been said, of course, about the matter of egg type, and while egg type can perhaps be identified by the ultra expert breeder, the average poultryman will undoubtedly find it necessary to connect up the trapnest with his breeders in order to know the performance of his birds.

Mr. Barron does not believe in giving up until the last day of the contest. When it was said to him on his recent visit to the College that these Connecticut Leghorns would in all probability pass his Wyandottes, he said that this fact alone did not disturb him; that if these Leghorns did not succeed in getting more than 50 eggs ahead during September, he would win during the month of October.

The prize honors for the month of August were as follows: The blue ribbon or first went to Tom Barron of England whose Leghorns produced 238 eggs. The second prize was also won by White Leghorns owned by Bonnie Brook Poultry Farm, Saratoga, N. Y., with a yield of 232 eggs, while Francis F. Lincoln of Mt. Carmel, Conn., won third with his Leghorns that yielded 223 eggs for the month.

The ten best individual scores to date are as follows:

Pen.	Eggs.
16 Conn. White Wyandotte.....	217
40 Experimental White Leghorn..	217
14 English White Wyandotte.....	211
20 Mass. Buff Wyandotte.....	203
53 Conn. White Leghorn.....	198
53 Conn. White Leghorn.....	198
16 Conn. White Wyandotte.....	196
17 R. I. White Wyandotte.....	196
33 Massachusetts R. I. Red.....	195
53 Conn. White Leghorn.....	195

It is interesting to note in this connection that the two leading individuals represent two very different breeds, namely, Leghorns and Wyandottes which are tied for individual honors at this the end of the tenth month of the contest. Neither of these individuals can hope to equal the record of 282 eggs made last year, thus establishing a record for American egg laying contests. Both of these individuals are, however, 13 eggs ahead of the best individual record in the first contest held at Storrs, which went to a Rhode Island Red hen from Kentucky with a yield of 254 eggs.

In going over the feed record, it is interesting to note the consumption of grain by some of the pens. The

Sunswick Wins Again

Sunswick Buffs have won the majority of first prizes at the leading shows since 1907 and they recently triumphed at the

NEW YORK STATE FAIR

where they won the following awards:

1st Cock 1st Hen
2nd Cock 2nd Hen
2nd Pullet
1st Cockerel 1st Pen
2nd Cockerel 2nd Pen

Silver Cup for best 10 Orpingtons of any variety.

Sunswick Farm S. C. Buff Orpingtons

have passed through eight successful show seasons and have won hundreds of prizes, both for ourselves and our customers. Supplementing their great record are their wonderful utility qualities, their early maturity and great stamina. Write at once for catalogue and wonderful offerings.

SUNSWICK POULTRY FARM, Rufus Delafield, Owner
Box J, SOUTH PLAINFIELD, NEW JERSEY

Experimental Pen of Leghorns that has had no beef scrap since the contest opened has consumed the following amounts of feed during the first six months of the contest:

Mash,	125 lbs. at $2.00	$2.50
Grain,	275 lbs. at 1.75	4.81
Milk,	284 lbs. at .50	1.42
		$8.73

This pen of birds during this same period laid 79¾ doz. eggs which at an average price of 30c per dozen are worth $23.93, thus it will be seen that there is considerable margin over cost of feed and egg yield when birds produce at this rate. To be sure these figures do not include the grit, shell, charcoal and mangel beets.

The management of the contest is receiving inquiries from time to time from breeders who want to buy cockerels from pedigreed stock. The time is undoubtedly near at hand when the careful breeder will want to know how many eggs have been laid by the mother of the cockerel he buys to head his breeding pen. In improving one's stock some investigators have maintained that selection for vigor and vitality was of primary importance. On the other hand, the very fact that any hen can lay 200 eggs or more in the course of twelve months is prima facie evidence of constitutional vigor.

All of the hens in the laying contest are being given about as much feed now as they received during the heaviest laying. The molting season is at hand and it is deemed advisable to feed birds well in order that they may grow new feathers without impairing their strength. It is believed that pullets just about to come into laying should, of course, be well fed at this season of the year. Although the days and nights are cool the birds in the competition are being watered twice daily and an abundant supply of green food is being furnished, in order that these birds may be kept in condition until the end.

The ten leading pens to date are as follows:

Storrs Experiment Station, Pen 42 (Not in competition), White Leghorns, 1,860.

Francis F. Lincoln, Mt. Carmel, Conn., White Leghorns, 1,838.

Tom Barron, Catforth, England, White Wyandottes, 1,817.

EVERMAN & EVERMAN Route 5 GALLATIN, MISSOURI

Small Open-Front House Dimensions.

Q. What size Woods' open-front house would you recommend for 15 White Leghorn breeders?

Corunna, Mich. D. S.

A. Eight feet wide by 12 feet deep. Make the high-studded rear part 8x8 ft., 4½ ft. high at back and 7½ ft. high at peak; the top 2½ ft. of this will be the "monitor" and contain the windows. The low-studded front part of house should be 8x4 ft., 5 ft. high at rear and 4 ft. high at front. The front should be boarded up one foot from bottom and the remaining part, 8 feet wide by 3 feet high, should be open and covered only with ¼-inch mesh wire netting. It will give comfortable quarters for from 15 to 20 birds.

Wants Foxes.

Q. I read your account of the destructiveness of foxes in the South Shore poultry district. I would like to buy live foxes and will pay more for them than the pelts will bring, young or old, if they are not crippled. The best way to catch them is in a common rabbit box-trap. A. S. Kirkpatrick.

Clarksburg, W. Va.

A. We have a lot of trouble with foxes stealing chickens and fowls, but have had no luck trapping them, as they prove too wary. It is not always easy to get a shot at them, for, although bold enough when one has no gun, they keep out of range when a gun is in hand. We print this correspondent's address with his letter and hope that some of the South Shore poultrymen who suffer from fox raids will be able to catch and market most of the pestiferous foxes. One neighbor lost 30 half grown chickens in one afternoon and shot three foxes the same day. Another has lost many more chickens and shot only one fox. A nearby fox den was found that contained partly eaten ducks, chickens, guineas and turkeys and a large number of fowl buried nearby at the edge of a cranberry bog. Plymouth County poultrymen would be glad to have all the Massachusetts foxes emigrate to West Virginia.

Laying Mash for Ducks.

Q. (1) Please give a laying mash for ducks. My Indian Runners have free range, but do not lay many eggs.

A. (1) Wheat bran, 1 bushel.
Corn meal, 1 bushel.
Beef scraps, 10 pounds.
Low grade flour, 1½ pecks.
Boiled vegetables, 1 peck.
Cut green rye or clover; or chopped cabbage; or scalded cut clover or alfalfa, 1½ pecks.
Fine grit or sand, 3 pounds.

Mix all with cold water and feed night and morning. At noon feed a rather scanty allowance of cracked corn, oats and wheat. Keep grit, oyster shells and water always before them. Keep your ducks confined in small yard and house until about 10:30 each morning and you will be apt to get more eggs. On free range they may lay eggs anywhere if allowed liberty early in morning.

Q. (2) How about feeding wheat to ducks in place of corn?

A. (2) Wheat and oats will answer very well for the noon ration, with now and then a feeding of corn. Would not cut out the corn meal in mash.

Q. (3) Is "digester tankage" good animal food for ducks and poultry?

A. (3) No. Tankage is only fit for fertilizer purposes.

Q. (4) Do you consider cooked sweet potatoes good for vegetable food?

Darlington, Okla. W. L.

A. (4) If not spoiled and if obtainable cheap enough they will serve very well, but should not be fed too freely, as they are liable to prove very fattening.

Market Egg Cartons and Cases.

Q. Where can I get the standard egg cases of white wood, also fillers of strawboard and flat cardboards to go between layers, also excelsior for packing? Where can I get cartons for eggs to be used in regular standard cases?

Illinois. Subscriber.

A. In every large city and in nearly every big town you will find box manufacturers and creamery supply houses furnishing these goods. You can get cases, fillers, flats and excelsior from the A. H. Barber Creamery Supply Co., 223 West South Water street, Chicago. Cartons that pack three to the layer, on each side of standard cases, can be had of W. A. Schurmann & Co., East Illinois street, Chicago. Supply dealers everywhere should be able to furnish these goods.

Ducks Have Indigestion.

Q. What is the matter with my Indian Runner ducklings? They get weak in the legs and stagger around as if drunk and in a few days die. I feed them a moist mash in morning and wheat at noon and night. The mash is two parts bran, one part shorts and sometimes a little corn meal. They

E. A. LICHTENWALTER Box A GIRARD, PENN.

have free range, but no access to water except for drinking. P. J. E.
Kalispell, Mont.

A. Indigestion is probably the trouble, partly due to too free graining, too little green food, lack of sharp sand grit, and failure to supply drinking water deep enough to permit them to get their heads into the water above their eyes. There may have been lack of sufficient animal food and it is probable that the wheat has been too freely fed. Heavy graining with wheat will quickly stall either chickens or ducks. Cut down the ration, allow some animal food in mash. Feed only twice a day and see that they get an abundance of green food.

Good Work with Hen and Chicks.

Editor A. P. J.—

Early in May this year I bought a White Orpington hen and 12 three-day-old chicks for $3. The hen is a daughter of a cock bird that was hatched from a $30 sitting of eggs.

I live in a city and have only a little space in which to allow them to run, although I have a good garden and grow plenty of green food for them and occasionally let them out in it to catch bugs. I now have six pullets and six cockerels. At three months my pullets averaged 3 pounds each and my cockerels 3.7 pounds each; my two heaviest pullets weighed 3 pounds 2 ounces each and my heaviest cockerel 4 pounds.

Since two months old they have had a dry mash before them all the time, based on the Cornell formula and have had grain three times a day, except when they have buttermilk at noon fed with dry bread. I now feed them mixed grain consisting of 2 parts wheat, 2 parts cracked corn and one part whole oats. They also have charcoal and shell before them at all times. Since weaning the chicks the hen has laid three dozen eggs, but she has been broody a good deal.

I would like to read of similar experiences in your paper and would like to have you comment on my experience.
Grand Rapids, Mich. Glen E. Clark.

(The above letter was dated August 22. It clearly shows that it pays a city dweller, interested in poultry, to buy a brood hen and chicks. This reader did exceptionally good work. Everybody will not be able to raise 100 per cent of the chicks bought and to have them turn out half pullets and half cockerels. It was not only good work but good luck. But everybody who likes poultry can find pleasure and profit in growing a few chicks in the back yard, or on the roof if need be, and in keeping a few fowls to furnish eggs for the table. It is interesting work and it is well worth while. There is a lot of satisfaction in home-produced eggs and chickens. There are a host of poultry keepers that live in towns and cities and we will welcome reports of experience from poultry keepers everywhere.—Editor Questions and Answers Department.)

Eggs Without Shells.

Q. (1) I have a small flock of Black Minorcas, very handsome birds and fine layers, but have been troubled this summer with their laying shell-less eggs and then eating them. The trouble is also found in the pens of Reds and Rocks, but to a less degree.

We provide plenty of shell, grit and charcoal and green food, but they have only small runs. It has been suggested that overfeeding might cause the soft shelled eggs. One hen we isolated and she laid a soft shelled egg the first day, then for six days laid as large and fine an egg with good shell as one could ask; so to kill such a hen does not seem just right, does it?

A. (1) We would not kill such hens. The fault is probably in the food, the condition of the runs, or in the manner of feeding. Grain affected with smut would cause such trouble. Small foul runs might in warm wet weather produce fungoid growths that would contaminate food and result in shell-less eggs and other disturbance of egg organs. Careless handling of the hens when removing them from the nests might induce the trouble. Spoiled grain is very liable to cause abortion and that is about what shell-less eggs and soft shelled eggs amount to. Find the cause and remove it. Feed an abundance of fresh greens, particularly clover or alfalfa.

Q. (2) Are Minorcas strong enough to stand open-front houses in this climate, where winter temperature falls to 30 degrees below zero? I was not at home myself last winter, but those in charge here said that these birds particularly suffered from frozen combs and would have died (I was told) if they had not been removed to the house cellar.

It was in the daytime after they had left the roosts that the combs were frozen. I have a hen house well ventilated and as dry as it can be made; with screened front and burlap drops, kept down mostly in winter to keep the snow out, and as the snow covers the upper windows the house is dark? Could that have any effect? I believe in the theory of open-front houses and know of other flocks of Minorcas that survived last winter with little or no trouble from freezing and in houses as open as ours.

Pippin Hills, N. S. R. M.

A. Two Minorca breeders have told us that they considered Minorcas too

White Orpingtons

Superb Type and Superior Quality

January and February Hatched Youngsters for Sale

Never have I had young chicks prove more completely the claim made for them regarding TYPE and QUALITY than does my present young stock. It is indeed a remarkable line of cockerels and pullets hatched in January, February and March. As it is possible to detect any minor faults in birds after they are eight weeks old, and to form a pretty fair idea as to how they are likely to develop, I have placed on sale about 600 of the most promising White Orpingtons ever produced. These are ready for delivery now—large, vigorous, massive birds raised on acres of blue grass sod.

Older Stock at Bargain Prices

Due to the fact that I must make ready for this younger stock, it will be necessary to dispose of a number of hens and cocks on the breaking up of my breeding pens the first of June. These, of course, must go at attractive prices; and here is an opportunity to get some foundation stock, the stamina and vigor of which could only be arrived at through the wonderful blue grass range commanded by Russell Cave Poultry Yards as a branch of the renowned 8,000 acre Elmendorf Farm. An extra fine lot of young Duroc-Jersey pigs for sale.

The modern chicken doctor

treats the flock rather than the individual bird. He knows that most of the troubles are flock troubles, though not apparent in all at the one time. He knows that most sickness of Chicks, Chickens, or Pigeons comes from infected food and drink, or defective housing. His favorite prescription is Germozone.

Germozone is generally used for flock treatment, though individually where necessary. Thousands give it twice a week regularly, a little in the drinking water. It is a great bowel regulator as well as a germ destroyer and, with chickens as with humans, the bowels largely gauge the health.

Germozone is especially desirable for use during changeable fall weather, warding off illness which, if permitted a foothold, may drag along all winter, if not immediately fatal.

For Roup, Canker, Swelled head, Sore throat, Sour crop, Loss of feathers, Chicken pox, Bowel complaint, Cholera, Worms, Gapes, etc., Germozone carries a full guarantee with every package.

Germozone is a valuable remedy for all domestic stock

GEO. H. LEE CO. Omaha, Nebraska

tender to stand the seashore climate in New England and farther north. We believe that the difficulty is more in condition and care than with the breed. Several years ago a Maine Minorca breeder had cockerels roosting out in the trees in an orchard in December and some of those birds were in sufficiently fine condition to be sent to the Boston Show, where they made a good winning. Both Minorcas and Leghorns were successfully wintered last winter in open-front houses by men we know and outdoor temperatures of as low as 20 to 30 below reported. It was about as cold a winter as New Englanders have experienced in a good many years. We believe the trouble with your birds was the result of poor care on the part of the caretaker. The birds must have been allowed to get out of condition. In a poultry house, in deep snow time, with a burlap curtain closed tightly and the windows snowed under, it was too dark in that house for the birds to feed properly or take exercise. The air was probably foul and damp from lack of ventilation. The birds must have been miserable from hunger, and the chilling cold of darkness combined with dampness. That other flocks had little trouble in similar houses, presumably well managed, should prove to you that your flock did not receive the right sort of care.

Sex in Guineas.

Q. How can one tell the males from the females in Guinea Fowl?

Elkton, Md. J. C.

A. Chiefly by the call. The male has little to say and his cry is a harsh and nervous clicking. The female has a peculiar and persistent call which sounds as if she were saying: "buck-wheat," "pot-rack," "come-back," or "good-luck," according to your fancy. The cry is repeated again and again and they particularly like to whoop it up at roosting time and on moonlight nights. The male is rather more heavy in comb and wattles than the female and he shows his sex in his attentiveness to his noisier mates. The cry is the easiest means of discovering sex. Many poultry judges dislike to handle Guineas in the show room because they find it so difficult to distinguish sex.

"Pip."

Q. I would like some information in regard to the 'pip.'' Have a flock of several hundred S. C. White Leghorns, hatched in June. When they were two weeks old they had their first attack of pip. I removed the "pip" at that time and they have been growing nicely since then.

They now have the pip a second time and so have the chickens of my neighbors a mile away. I was advised the first time that this trouble was caused by the nostrils being stopped up, but this is not the case now, I am sure. The first time the chicks died with nothing in their crops, but this time they die with their crops full. They are now housed in open-front colony coops (about one-third of the front open) and have the range of a 40-acre farm.

I am feeding the following: Mash: chop, 3 parts; middlings, 2 parts; gluten, 1 part; bran, 1 part; heneta grits and beef, 1 part; scratch feed: cracked corn, 1 part; wheat, 2 parts; barley, 1 part; hulled oats, 1 part.

Have also fed at times alfalfa meal, which I have doubts about. Both cases of pip were preceded by a few days of

wet weather (the only ones we have had). My neighbor's rations are not the same as mine. Will you kindly advise what you think caused the trouble; the nostrils stopped up by a cold, or was it the feed? Is it contagious and how can I prevent it in the future?

Elvaton, Md. J. P.

A. The term "pip" is very commonly used to describe a symptom that may be associated with any feverish condition and with serious diseases of the respiratory organs. The skin of the mouth becomes hard and dry and a horny "pip" or scale forms on the end of the tongue. Apparently the symptom may result from different causes. Some cases are not in the least serious. In others the symptom occurs in dangerous diseases which may prove fatal. It may accompany simple colds and obstruction of the nostrils and is believed to be due to mouth breathing and failure of the mucus-secreting glands to function properly. It may accompany feverish condition due to disorders of the digestive organs. It may sometimes be a simple inflammation of the mouth caused by irritating dust or vapor. Some writers believe that it may be of specific origin, but no one has yet proved it.

The hard scale or "pip" should never be removed by force, as such rough treatment may be followed by serious and even fatal results. Free application to the mouth of a solution of 15 grains of boric acid in an ounce of water is frequently helpful and usually after a few applications the "pip" will come away easily. Always use gentle measures in trying to remove the scale.

It is probable that your birds have colds. You may have them too crowded in the colony coops. See that they have abundant roosting room. Be sure that they do not have to breathe the fumes of strong disinfectants or the dust of lime. Look carefully into their condition and into the quality of the food supplied. Seek the cause and remove it. The boric acid solution is harmless and may be used freely for cleansing the mouth and nostrils. "Pip" may accompany contagious disease, but we doubt if "pip" itself is contagious.

Choosing a Location in Northwest.

Q. Which in your opinion would be the best place to locate an egg farm of the two following:

Place A. Cranbrook, British Columbia, temperature chart enclosed. Rainfall average about 18 inches a year, including about 3 ft. of snow. Elevation 3,000 ft. Wheat sells for $1.50 per 100 pounds and oats for less.

Place B. Victoria, Vancouver Island, temperature chart enclosed. Elevation about 200 ft. Wheat of best quality, $1.75 to $2.50 per 100 pounds, and oats about $2 per 100 pounds.

Prices of eggs average about the same in both places. Also, what would be the best kind of fowl to keep for eggs in both locations?

Winnipeg. C. W. J.

A. We are not sufficiently familiar with either location to judge as to its desirability, neither do we know the condition of the poultry and eggs market. While the first cost of grain seems

Newtown Giant Incubator Corporation

21 Warsaw St.

Harrisonburg, Virginia

a bit high at Victoria, Vancouver Island, the climate conditions as indicated by the chart seem to be more favorable to poultry than those at Cranbrook, B. C., and the milder climatic conditions and lower altitude would perhaps offset the difference in grain cost. Personally, if we had to choose between the two and found the market conditions good, we would prefer to take a chance on the Vancouver Island location. In either locality we would favor White Plymouth Rocks, Rhode Island Reds or White Wyandottes, and believe they would make a good showing in egg production if properly housed and handled.

Farming Out Chicks.

Q. I want to farm out a thousand or fifteen hundred chicks next year. What in your estimation would be the fairest way to both the farmer and myself? He of course will feed and care for them to maturity and attend to all shipping of same to me upon request. F. R.

Evanston, Ill.

A. In the first place, you should know your farmer pretty well and know that he is capable of getting the results you want. You would want to have a definite understanding as to how the chicks are to be brooded, fed, housed and cared for. That ought to be in the written contract. You of course will hatch and deliver the chicks. You could agree to buy and accept delivery of all the chicks between October 1 and 15 at $1 each; or agree to purchase your selection of the chicks between those dates at $1.50 each. The farmer to contract to market all of the balance as dressed poultry; unless you saw fit to allow him to keep a flock for breeding and laying purposes, subject to your first option on all produce he did not require for home use. You can't get such work done well at a lower price, and it would not be fair to the farmer to expect him to hold the birds indefinitely, subject to your shipping orders, unless you paid him for it. If production cost increases you might have to pay more. In any event you will have to pay enough to make it an object for the farmer to do a good job and to insure being dealt with fairly.

Wants to Keep a Cock from Crowing.

Q. (1) I live in the city and would like to know how to keep a male bird from crowing and disturbing the neighbors.

A. (1) Don't know how to stop a cock from crowing and still keep him about and worth his feed.

Q. (2) Would it be possible to keep two breeds of chickens, allow them to go about freely and have each breed go back to its respective house at night, or would they get mixed up?

A. (2) The breeds would cross if allowed to run together, if that is what you mean. You might be able to train two flocks so that they would not mix up and would return to their respective houses, but you could not stop two breeds from crossing if running together and any live male with the flock.

Q. (3) Please give me a formula for a wet mash. A. W.

New York.

A. (3) Equal parts by weight of bran, middlings, corn meal, gluten, ground oats, cut clover or alfalfa, good beef scrap. Scald the clover or alfalfa. Mix the ground stuff dry. Wet up the whole with cold water or with skim-milk. Make crumbly, not sloppy. When milk is used, use about half the quantity of beef scrap.

POULTRY AND FRUIT FARM FOR SALE

Do you know that a *Poultry Farm* in the *Sunny Southland* near the *Gulf Coast*, where there are cool breezes all Summer, and no cold weather in *Winter* months, and where *Poultry* can run outdoors every day in the year is a wonderful section to produce *Poultry* and *Eggs* for *Profit*?

We offer *Poultry* and *Fruit Farms* all wire fenced, equipped with new Bungalow Home, Poultry Houses stocked with 500 laying hens, 2½ acres set to Orange, Fig and Pecan trees, and agree to take one-half our pay for farm in *Eggs*. We guarantee good markets for *Poultry*, *Eggs* and *Fruit*, and you can begin to make money the day you take possession.

Read our *Book* entitled "*Looking Ahead*," and it will give you some interesting facts about the *Southland*, and the great *Poultry* and *Fruit* industry there. It's free to anyone.

Womans Success With Poultry

Helen F. Woods, Editor

A Department for the Exchange of Helpful Poultry Experiences

AN AMATEUR'S NOTES ON LEARNING THE GAME.

By E. H. JOHNS.

PROBABLY an amateur's first year in any business is a laughable spectacle to the expert in the same line. It is really amusing to the amateur himself (or herself as in this case) to look back upon; and for that reason, if for no other, I would not cross out that first year with poultry.

To begin with everybody (man included) who has not raised poultry thinks that the poultry business is the one best bet, since all classes from knaves to fools can make good in it! It is not only an easy undertaking, but the one who undertakes it becomes the champion easy mark for friends and strangers alike to hurl their knowledge of the business. The individuals who proffer unsought advice, be it understood, almost to a man, are in complete ignorance of the first rules of the game—and the real head springs of the fountains of poultry knowledge refuse to ooze out so much as a drop of genuine information for the thirsty beginner. On the other hand, he is entirely confident that an amateur, knowing next to nothing anyway, is just as well off with scrubs and disqualifications, as he would be with the first birds in the land. All of which may be.

In my wild thirst for knowledge on the subject, I subscribed for a score or more poultry papers, and for some months hung breathless upon their every word. However, as I absorbed more and more of their voluminous advice, the contradictions at first baffled, then alarmed me, and finally made me mad. Today, I was learning how to feed a scientifically balanced ration and tomorrow I found out that the birds should feed themselves, knowing better than I, what their internal economy required. Today I was mating according to Hoyle and tomorrow I found he was a back number, with "Casey at the Bat." Accordingly I began thinning down my list of poultry periodicals, many of which were well inflated, but the filling was unsubstantial. At any rate I have put it down in my notes that fully two-thirds of my difficulties arose from taking unreliable advice.

I have yet to find an excuse for one who knows little if anything about a business, writing advice on the subject for publication. (Please note my little spiel is presented solely as food for thought.) In a number of papers we find little aside from advice from beginners. Of course, they do not so call themselves, but the advice proves the statement. The poultry departments in many of our farm papers contain more genuine humor than the comic supplements of the daily press. Note this from a prominent farm paper before me. "Early hatched pullets are likely to begin laying earlier than those that are hatched as late as June or July!" Another editor of a poultry column tells us that "the secret of getting eggs is in keeping the poultry house clean!" Such advice, however, is not likely to cause much damage, because a man, woman or child with ordinary common sense who had never seen a hen, would appreciate the fact that the writers of such advice, while competent to talk, did not know what they were talking about.

Most of these writers are in the business to get before the public or to pay for their ads, or just for the joy of seeing their names in print and while at first they may seem very knowing to the amateur, by and by, even the weaker sex gets on to the fact that filled space is not always of value. Once we get a real live interest in the poultry game and engage personally in poultry work, we begin to analyze the statements we read in poultry papers and poultry columns and a good many times

WOODCREST PARTRIDGE WYANDOTTES

The record champions of Madison Square and Boston have bred true. In September the Great New England Fair returns them winners of 1st and 2nd cock, cockerel, hen and pullet. If you want to lead and let others follow, you need this strain. Order now and get first choice. Hundreds of choice youngsters to select from.

Will cheerfully tell you about our plan.

CHARLES G. PAPE, LICENSED A. P. A. JUDGE Box B74, Fort Wayne, Ind.

SACRIFICE SALE OF BUFF ORPINGTONS

On account of owner changing residence to Florida, we will sell our entire stock of 500 young and 100 old Buff Orpingtons—no culls. We have made practically clean sweeps wherever we have shown since 1910, among which are:

Columbus, Ohio, Indianapolis, three successive seasons; Pittsburgh, New Orleans, Atlanta, Cincinnati, Nashville, and Cincinnati again, in competition with the very best breeders of the United States.

A large percent of our birds are in full plumage and standard weight, and ready for the show room now. We believe we have the finest bunch of Buff Orpingtons in the United States.

Guarantee Offer: If any bonafide purchaser or representative of same, from any point in the U. S., who knows good birds when he sees them—who means business, will come and inspect our birds and does not agree that they are the finest bunch he ever saw, we will refund to him the expense of his trip. Write at once to

BRUCE & ABBOTT, WHITELAND, INDIANA

it does not ring true. And it is just the same way with the advertiser. All the ads are simply dreams of the coming of the millennium in the poultry world, until you really engage in the work and get to analyzing the statements made by the would-be seller. Occasionally we find one who advertises like a real human being, engaged in a human undertaking and who has thus not yet been able to breed a perfect strain of fowls in which culls were an unknown quantity. Everyone will agree, I am sure, that a good many of the ads in our poultry journals listen like the proverbial con game.

The good straight-from-the-shoulder articles which some of the best poultry papers are giving us are an education in themselves. I am learning some of them "by heart" as I used to learn "a selection" for the last day of school. And the beauty of it is, that they give us eager-to-learn beginners something to work on. No hard and fast rules are laid down, but there is a firm foundation and a substantial framework which individually we can work out and finish along lines suited to locations, and inclinations. No worker wants to walk a straight plank with no opportunity to broaden out or develop along individual lines. The poultry business to date has not stunted the writer either physically or mentally though sometimes her wallet has been rather flat.

Though I have not advertised to date, a good many visitors have found me out, and ask to be shown around, and incidentally given all the details necessary for successful poultry raising. They usually know how it should be done, but ask to see if I do. Consequently while I am raising fairly good percentages yearly, and selling eggs unreproachable as to age and purity, I make no claims as to the "know how" of poultry culture, preferring to be a good listener rather than a free lecturer. One told me the other day that poultry manure should not be a waste product—it could be used on the garden! I am expecting soon to see his name as the poultry editor of a farm paper.

GOLDEN and SILVER **CAMPINES** WHITE and BUFF **FAVEROLLES**

The Faverolle is interesting a lot of people. As a table fowl and a winter layer we have never found their equals. Our Silver Campines are of high quality. In Golden Campines we have new blood for you that you can't get from any other breeder. Our female lines came from the King of Belgium; males from the yards of the Rev. Jones, England. On account of the war you may not be able to get birds from England, so place your orders early. Our prices are attractive and so low that all can start in the above varieties.

AUG. D. ARNOLD, Box 777, DILLSBURG, PA.

SATISFACTION STRAIN **BUFF ORPINGTONS**

Have given satisfaction for so long that they are now worthy of the name. Satisfaction Strain means just what the name implies, and today as well as in the past **I HAVE NO DISSATISFIED CUSTOMER IN THE WHOLE WORLD.** At the last **Great Chicago Show, 1914**, I made the greatest winning ever made by a Buff Orpington Breeder in any Chicago show, viz:—COCKS, 1, 2, 3; HENS, 1, 5; COCKERELS, 2, 3, 4; PULLETS, 1, 2, 4, 5; OLD PENS, 1; YOUNG PENS, 1, 2, 4; SILVER CUP BEST DISPLAY. Following the great winning made as above, there has been a greater demand for my stock than I could supply, and every hen and cock bird I cared to spare is sold. I still have 600 cockerels and pullets left to spare, all sons and daughters of the above and other winners, which are offered for sale to win at any show. Send in your order now and birds will be delivered when wanted, conditioned and trained free just before your show. Prices of stock, $3 to $25 each. My catalog, "THE BUFF ORPINGTON GUIDE BOOK" sent free. Write me regarding your wants.

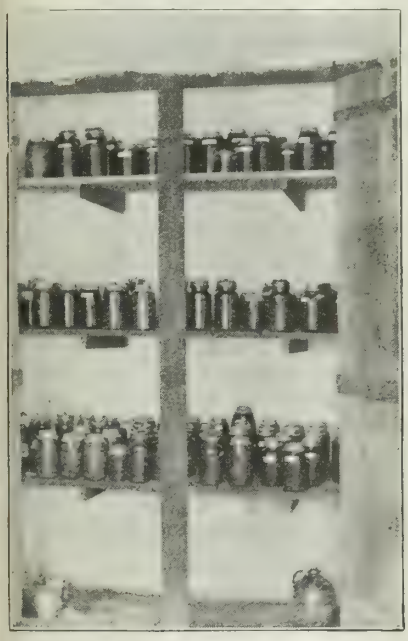
BYERS ORPINGTONS

BUFFS BLACKS WHITES

In all my experience judging Orpingtons at New York, Boston, St. Louis and Los Angeles, I have never handled better ones than I can and will supply this season. I can furnish quality to win above or any other shows as I have repeatedly furnished in the past. Lowest prices also named on the best layers possible in utility stock. All this is a natural result of my 15 years of consistent effort to improve the high standard of quality to meet the public demands of tomorrow instead of yesterday. Catalog free. Quotations by wire when necessary.

C. S. BYERS (Orpington Specialist 15 Years) **HAZELRIGG, IND.**



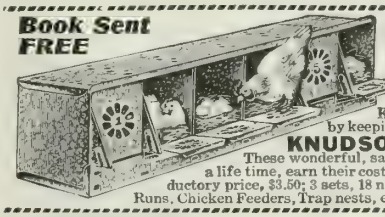
Home and the Table
Good Things for Everybody

Helen J. Woods, Editor

"Economy is the only mint to which we all have access."—Old Adage.

AT this time of general advance in the price of foodstuffs the average housekeeper is moved to look about in an effort to discover some means whereby she may meet this condition, while at the same time keeping her table well supplied with palatable and nourishing food.

The fall months, the most bounteous of the year, offer a wide field for work along this line. At no time of the year can so great a variety of foodstuffs be bought so cheaply as during the early autumn. In fact, throughout the country, great quantities of fruits and vegetables are going to waste at this time. The housekeeper intent on



Canned fruits and vegetables put up at odd moments by a busy farm housekeeper. They comprise berries, plums, pears, peaches, apples, quinces in fruits, and asparagus, peas, beans, tomatoes, beets, and corn in the vegetable line.

keeping down expenses, will bear in mind that the first step toward making a permanent success in any business is that of utilizing the waste materials. Immense fortunes have been made in nearly every line of business through the utilization of this apparently unimportant item—waste. The American housekeeper has yet to realize the worth of genuine economy of time and materials. Ours has been a land of plenty, and "waste" the great American failing.

Just now with the price of sugar soaring, canning and jelly making of fruits may even appear as an extravagance, but where the fruits are to be had for the picking as is the case in almost every country place, the expense need not be great. If, however, it is considered an unwise expenditure at present high prices, nearly all berries and fruits may be put up without sugar, by giving a little greater attention to the matter. The contents of jars must be thoroughly sterilized and the sealing absolutely airtight. New rubber rings should be used each time in putting up fruit in glass jars, as old ones have usually flattened out sufficiently to admit air to the contents. In putting up fruit without sugar in glass jars, after clamping down top, allow to cool and dip the top (over entire top) in melted parafine which will insure the contents keeping indefinitely. For the purpose of jelly making, the juices of fruits should be strained off, bottled and sealed hot. The jelly may then be made at any time convenient for the housekeeper. There are, also many and varied combinations of fruits and vegetables, desirable for pickling. A large earthen jar may be kept in readiness for any left over fruit or vegetable that may be used in an appetizing mixed pickle. Place boiled vinegar in the jar and add from time to time, lima or string beans, cucumbers, cauliflower, small green tomatoes, peppers and onions and a sprinkling of nasturtium seeds, until there is sufficient to make a mixed pickle.

A brine should then be made by using about one-fourth as much salt as water, having it sufficiently deep to cover the pickles. After the salt is dissolved, put the pickles in carefully, not bruising them, and leave in the brine for about twelve hours. When removed they should taste slightly salt. The seasoning and spices used should be fresh and carefully selected, since the flavor is dependent upon this. Usually such spices as cinnamon, clove, mustard seeds, horse radish, ginger root, mace and small red peppers are tied in a muslin bag and placed in the pickle jar, while salt, pepper, mustard and sugar go directly into the vinegar. Some sugar is used in nearly all pickles, whether intended to be sweet or otherwise, but in the concoction of the sweet pickle, it is a most important ingredient.

Under the wings—look there for lice when you wonder why your hens are not laying. Lousy hens are mighty poor layers. There is one safe, sure and speedy preventive against lice,

Dr. HESS INSTANT Louse Killer

Sprinkle it under the wings, in the cracks, on the roosts, in the dust bath. Kills lice on poultry and farm stock; also bugs on cucumber, squash and melon vines; cabbage worms, slugs on rose bushes, etc. Sifting top cans, 1 lb. 25c; 3 lbs. 60c (except in Canada and the far West). Guaranteed. Write us if your dealer hasn't it.

DR. HESS & CLARK
Ashland
Ohio

DR. HESS INSTANT LOUSE KILLER

KILLS LICE

is not only a great economy, but the housekeeper who has exercised proper care in the work knows she is providing her family with good wholesome food, free from adulterants. The vegetables should be thoroughly cleaned before being placed in the jars, and with the cover on, but not clamped down, steamed until tender by placing the jars on a rack in a wash boiler or other receptacle. The length of time required for steaming depends upon the vegetable being canned. The sealing is done in the usual way with the extra precaution of dipping the tops of jars in paraffine to exclude any possible air from the contents.

At the recent convention of the American Poultry Association in Chicago, I had the pleasure of meeting a southern lady who annually stores away for her family's use sufficient home grown fruits and vegetables to serve throughout the year. She uses tin cans with a special process for sterilization and sealing and has found it to be of inestimable value in catering to her family, enabling her to serve a great variety of fruits and vegetables the year round and at very slight expense. Such a system would not only prove a great economy in many households, but would mean better food and more of it at small cost.

In the matter of bread, the average family throws away sufficient to supply another family. Whole loaves of bread, untouched rolls and cake are frequently seen thrown into the waste. A walk down any street of cities and towns where garbage is collected, on a day when the waste is placed out for collection, will convince any of us that we have yet to learn the first principles of economy.

In meat markets, hundreds of pounds of bone and fat are sold to willing customers and then taken out and kept by the dealer to be again sold by him to bone or soap factories. There is no greater opportunity for careful buying than in the purchase of meats.

In economic marketing, it is necessary to know what one is purchasing in order to buy advantageously and this means knowing the value of the so-called waste parts as well as of the meat itself. A housekeeper who makes proper use of the fatty parts of meat used on her table, will find it unnecessary to buy much lard or shortening. In fact, there will in most families be many more pounds of beef, bacon and poultry fat than she is able to use for pastry and cookies, or for deep frying of doughnuts, crullers and croquets.

With flour at present prices, frequent accumulations of dry bread become quite an item in the family expense account. Bread that is no longer palatable because of dryness should be thoroughly dried in a slow oven and then put through a meat chopper, the crumbs being placed in clean jars where it may be kept sweet and wholesome for a long time. These dried crumbs may be used in countless ways, but in equal quantities with flour make delicious muffins, popovers, griddle cakes and waffles. They also may be used instead of coarse meals in the making of brown bread, or served hot as a cereal with cream, as well as the usual breading of meats, fish or croquets.

Probably in the left-overs in the refrigerator we find the housekeeper's greatest lack of economy. The carcass of a fowl left from yesterday if put immediately into the soup kettle when removed from the table would have been the means of an appetizing soup for today, but if left in the refrigerator to dry (or to mould) until the last of the week, it will serve its purpose better if consigned to the garbage can. The cooked vegetable left over or the bit of fresh fruit left to spoil day after day helps to swell the leak in household expenditure for which we get nothing in return. I recently visited a housekeeper on a large farm, who had been making an effort to make good along this line by utilizing all left-overs in fruits and vegetables by putting them up for winter use. While cooking the usual farm dinner at noonday, she had made it a practice to can a jar or two of whatever fruit or vegetable she had on hand, or if she had a little of several kinds, to combine them in conserves or mixed pickles or whatever could be palatably concocted with what she had at hand. The result was a surprise to all who had the privilege of viewing her well-filled preserve closet, or of sampling her delicious jellies and jams, spiced and pickled fruits and vegetables.

We can all well afford at this time of high prices to cultivate a little of the thrift of the old-world housekeeper by making the best use of the foodstuffs at hand.

Pear Chips.

Peel and cut the pears into thin strips sufficient to make eight pounds. Pare two ounces of green ginger root and cut into small pieces. Squeeze the juice of four lemons, cutting the rind of two into thin strips. Place all into a preserving kettle and boil until tender and transparent.

Spiced Grapes.

Wash and remove skin from four pounds grapes and place the pulp in a porcelain-lined sauce pan and allow to simmer until soft when it should be strained through a sieve to remove the seeds. Add to the strained pulp two pounds sugar, one cup vinegar, three teaspoonsful ground cinnamon, two teaspoonsful ground cloves, together with a few of the grape skins and simmer slowly for about two hours. Place in glass jars while hot.

Dried Sweet Corn.

By C. W.

Boil the corn on the cob in usual manner, or use what is left at any time in serving. Cut the corn from the cob, spread on thin plates on edge of oven or warming oven where it will neither burn or sour before drying out. When well dried place in glass jars. When wanted for use, soak in water over night and use as canned corn. Delicious.

Now in its fourth year; in use in every state and territory and several foreign countries; many large poultry farms use from one to five. "I am enclosing my check for two more of your No. 5, Double Quick Sprouters. The one I bought some weeks since is doing fine work."—C. H. Latham, Beauty and Utility Barred Rocks, Lancaster, Mass. "I ordered your No. 5 Double Quick Sprouter shipped to Maud L. Kaler, Columbia City, Ind. This one is proving so satisfactory that she wants another one of the same size and therefore you will find draft for this second sprouter."—Milo R. Meredith,

Built in 6 sizes from 1-4 bu. to 8 bu., for a few hens to 1,000.

CLOSE-TO-NATURE CO., 38 Front St. Colfax, Ia.

According to astrology this is an unimportant day. Venus is in benefic aspect early in the day, but later Uranus is mildly adverse.

* * *

The late A. P. A. meeting is still the question of the day.

* * *

The new standard illustrations are an improvement over any others ever had. The A. P. A. should offer the use of these to the specialty clubs so that the official and exact form can be had by the beginners. The specialty clubs make the breeders who later become A. P. A. members and it is to start them right that we favor this plan.

* * *

Mrs. D. W. Young held daily receptions while at the Chicago convention. It was a rare collection of "ladies" there, and I know of two bachelors who had to toe the mark and tell why. Link also knows them.

* * *

We are pleased to note that Jason Hanibal Drevenstedt agrees with us that the breeders of each variety should in future have the say in Standard making. Now we want others to fall in line by the time we have another Standard to make. Hope this will be understood.

* * *

If you do not wish to leave it to the specialty clubs, then appoint breeders' committees for the work, and rest assured it will be done right and save much of the floor squabbling.

* * *

The feature of the "Gentlemen's Smoker" was the piano selections by Mr. John S. Martin, Port Dover, Ont. Besides breeding the best of White Wyandottes his hobby is music; the quality rendered was most gratifying

* * *

The judges question will not down, and I believe the only solution is in a strong and united judges' association. Neither the judges nor the poultry associations have what they think they should receive from the A. P. A. It is left for both to organize and to demand their dues.

* * *

Uncle Abner says: Every gal just loves to wash dishes until after she marries the feller.

* * *

Fall is here.

* * *

Old Autumn sure has come abought.
And summer sweet's a goner;
Again the roasted chestnut shout
On every bloomin' corner.

The New York State Fair with one of the best poultry buildings in the world and with over 6,000 birds shown has set a new mark in fall shows. There were extraordinary classes in Rocks, Wyandottes, Reds, Leghorns, Orpingtons, Minorcas, etc. The judging was classy and the management the best. Superintendent Wm. H. Manning has shown the way in what is possible to produce and accomplish. He has the breeders with him to a man and well deserves the best we can say of him and his work.

* * *

This would be very incomplete unless we also mention Mr. Manning's able assistant, Mr. W. M. Anderson. Mr.

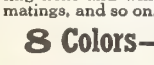
STILES' COLORED Leg Bands

DURABLE, PRACTICAL, ECONOMICAL

Provide instant identification without handling. Identify birds as far as you can distinguish colors. Tell the age of poultry, which are yearling hens and which are older, your different matings, and so on.



8 Colors—Red, White, Pink, Amber, Blue, Black, Ruby, Green.

SINGLE COIL BANDS—for adult fowls. 25-35c; 50-60c; 100-$1.00; 250-$2.25; 500-$4.00.

DOUBLE COIL BANDS—for adult fowls. 12-25c; 25-50c; 50-85c; 100-$1.50; 250-$3.25; 500-$6.25.

BANDS FOR GROWING BIRDS—(2 sizes, state age) 12-20c; 25-35c; 50-60c; 100-$1.00; 250-$2.25; 500-$4.00.

BANDS FOR DAY OLD CHICKS—Six colors: Red, Blue, Black, White, Pink, Amber. 12-15c; 25-25c; 50-40c; 100-75c; 500-$3.50.

Mention your variety when sending your order.

CHAS. L. STILES
232 N. Third St. **COLUMBUS, OHIO**

Anderson was there early and late and the wants and wishes of exhibitors and the visiting public had his best care and attention. We did not see a disgruntled person at the show. Note our report elsewhere of this exhibit.

* * *

The great fall shows so far seen do not look like a short poultry crop. Entries are greater than ever and the quality is the best ever.

* * *

The Rochester Exposition was held this week (September 7th to 12th) with a poultry exhibit of over 3,000 birds. This was but the second year that poultry has been shown here and this great entry proves that in future this will also be one of the big fall shows. The poultry department is in charge of the Flower City Poultry Association, with Messrs. Tallinger, Otto and Gunthier in personal charge. Remember this exhibit and send for premium list next year.

* * *

Toronto has again held its exposition and from reports received the poultry department was again a feature show. For years they have held a great exhibit there and we hope next year to again visit there and to report it fully for our readers.

* * *

There is no doubt that we are beginning to appreciate the birds. The interest taken in them is largely due to the good work of our Department of Agriculture in making better known the value of the birds to the farmer. There is evident increased appreciation of the value of wild birds, although it took many years to convince most tillers of the soil that the feathered creatures were friends and not enemies. It is coming to be understood that the loss inflicted by occasionally eating fruit or grain is as nothing compared to the benefits derived from the destruction of insect pests which work havoc with the crops. These insects for the most part are the natural food of the birds, preferred to any other, and wherever birds are numerous insect pests are likely to be scarce. In some localities landowners are importing nests and so successful has been this experiment that more will be erected. Give the birds a chance, attract them and find them lovable and profitable neighbors.

* * *

The poultry breeders of New York state will be pleased to know that at the state fair a New York State Poultry Breeders' Committee was organized to attend to the interests of all those who wish to exhibit their stock at the Panama Exposition at San Francisco in 1915. The committee is Wm. H. Manning, chairman, Saratoga Springs, N. Y.; Geo. E. Noeth, secretary, Rochester, N. Y.; D. Lincoln Orr, J. H. Drevenstedt and H. P. Schwab.

* * *

The committee expects that the breeders from this state will exhibit upwards of 1,000 birds. They wish to hear from every breeder and will very shortly mail out a circular with full information.

* * *

Billy Atherton now has the badge of approval. Wonder what he will do with it? If he had that lost hat it would be of some use to him. Live in hopes, Billy, for the lost may return.

* * *

Six months after marriage a woman begins to feel a kindly interest in the man she could have married but didn't.

* * *

Editors and associate editors of the poultry journals should be very careful and not take too much for granted these days. They should know the facts in all cases before they publish articles that reflect in any way upon breeders of good standing or judges. There has been a case of this kind lately where an associate editor was mislead by vile and wrong statements from those who imagine themselves prominent in the poultry industry—men who seek safety behind others to grind the imaginary ax. But the truth will out and the afterclap will no doubt be more than they bargained for and all they deserve.

* * *

This is a condition that should not exist. It is just that kind of men who aim to always keep this great industry down and to be known simply as the chicken business. We have always worked for the uplift of the business and seek the support of every honest man to this standard of a greater, grander and more profitable poultry industry. Let us have fair play always and in everything.

* * *

Convince a man that he is wrong and you have made an enemy.

* * *

Never pass up your friends in order to gratify strangers.

* * *

In another five weeks the winter shows will have the call. Prepare for them now. Every little bit of the right kind of work helps and may bring the honors to you later. The result, whatever it may be, will be gratifying to you if you have tried.

* * *

Select the most promising chicks, separating the sexes; look them over; know their needs and see that they get them. By special feed and care you can force them and bring them up to condition. Get to work right quickly, for lost time now means another year's delay.

* * *

Make it your positive business to exhibit your stock at one or more shows this season. That is where we all had to begin and you may as well start now to make that record you have been wishing for. A mere mention in good competition is worth more to you in the long run than a clean-up with no competition. Aim high and keep at it.

* * *

It is only sometimes that "He who hesitates is lost." We've known many a Hesitator to be saved.

Recent Inventions for Poultrymen

By Lester L. Sargent, Patent Attorney, Washington, D.C.

An egg-turning device for incubators, invented by Alfred H. Nielsen, Minneapolis, has depending side-bars that rest on the rails that support the egg tray. In consequence the lower edges of all of the bars of the egg-turning

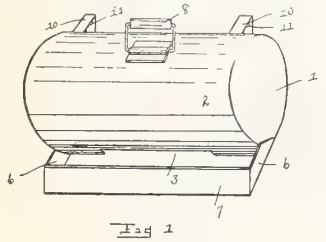

Fig 1

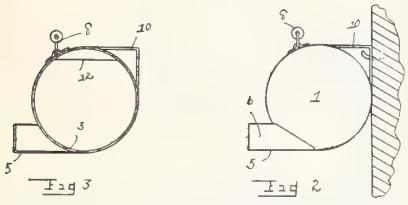

Fig 3 Fig 2

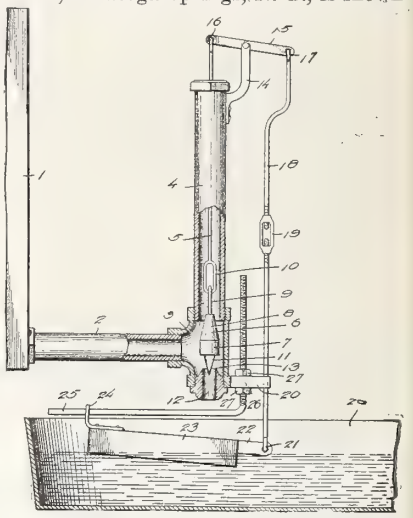
Watering device patented August 25th by George C. Eaton, Norwich, N. Y. No. 1,108,151.

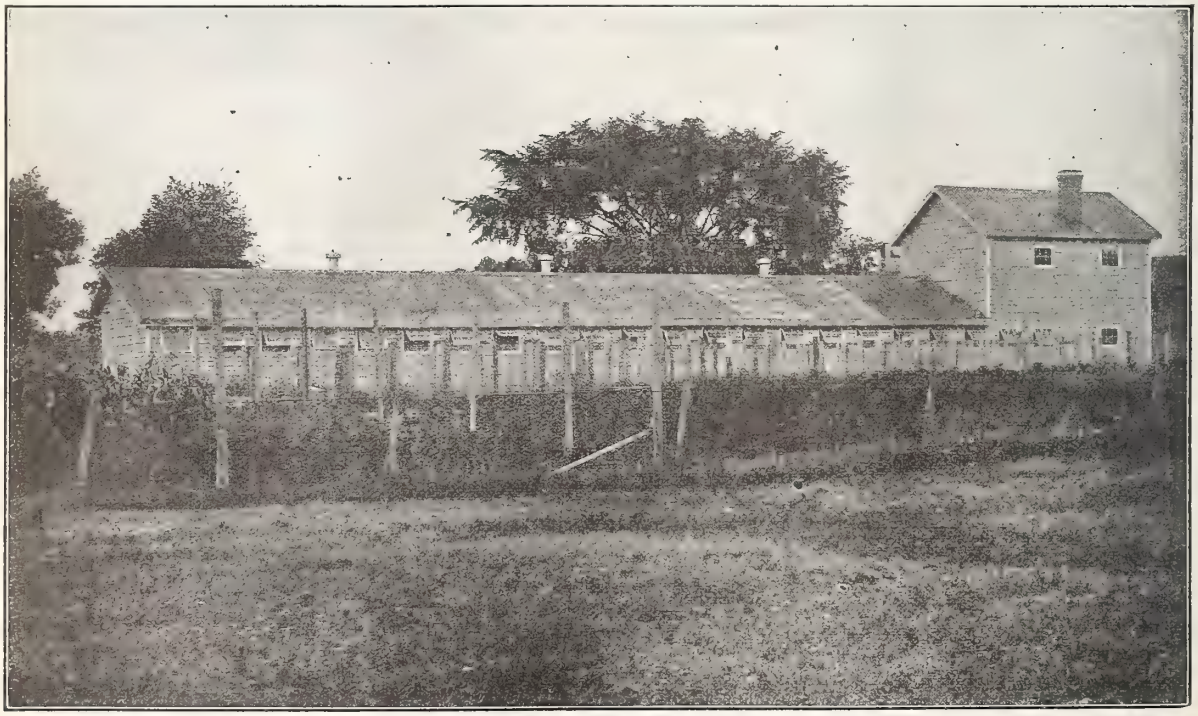


rack are raised above the screen of the egg tray. The rack therefore does not interfere with the even distribution and proper circulation of the hot air between and around the eggs. A rod attached to the egg-turning rack projects through an opening in the door or wall of the incubator so that the rack may be operated without opening up the incubator. Patent 1,107,201.

A poultry cooling and display rack, the joint invention of Samuel O. and John E. Wolfe, Angola, Ind., consists of a series of spaced spring fingers having their ends engaged in short slots in the upper portion of an L-shaped bar. The poultry is applied to the rack by pressing the legs of the fowls between adjacent spring fingers, the spring tension of which causes the shanks to grip the legs of the fowl and hold them suspended. Patent 1,108,055.

A chicken-feeder invented by Mary E. Strickler, Meadville, Mo., is cylindrical in form, with an annular shutter by which the size of the openings may be regulated to accommodate various sizes of chickens. The grain or feed is placed in a nearly conical-shaped hopper, from which it gradually flows to the broadly conical base of the feeder, so that the feed is automatically supplied to the chickens by gravity as it is required. A further feature of the invention is an annular channel for disinfectant and a wick threaded through apertures into and out of the channel, with exposed portions of the wick over the openings where the chickens feed. Patent 1,108,019.

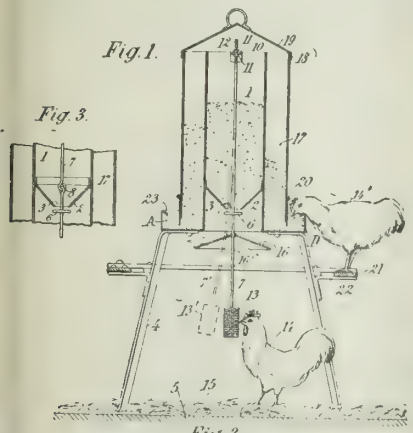
A fireless hover devised by Louis H. Becker, Seymour, Ind., employs strips of cloth loosely depending from parallel rods as a means for protecting the chickens. The cover is removable. Patent 1,106,768.



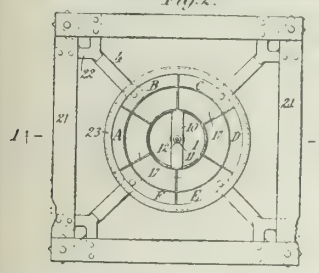
An ingenious automatic water-feed for poultry, the invention of Harry L. Davis, Saratoga Springs, N. Y., is shown

Automatic water feed for poultry patented August 14, by Harry L. Davis, Saratoga Springs, N. Y. No. 1,107,268.

in the accompanying illustration. The turnbuckle affords a means for adjusting the apparatus so that different depths of water may be constantly maintained in the pan. Patent 1,107,268.



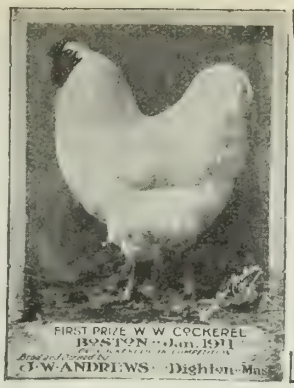
George C. Eaton, Norwich, N. Y., is



One of the Brooding Houses on the Granock Farms, Poughkeepsie, N. Y. This house has a capacity of 2,000 birds. Granock Farms make a specialty of exhibition and utility S. C. White Leghorns.

the inventor of a watering device for poultry. The body of the receptacle is cylindrical, with a trough projecting tangentially, to which water is supplied through a slit in the body of the receptacle. Opposite brackets with their sides tangential to the body of the receptacle act as a stop to prevent rolling of the device, or may be used in fastening it to the wall. Patent 1,108,151.

Joel M. Foster, Brown Mills, N. J., is the inventor of a poultry exerciser and feeder that is novel in having auxiliary feed troughs associated with an exercising feeder. Spillings from the feed troughs will fall within the zone of discharge of the spout from the scratch



Feeder and exerciser patented August 25th by Joel M. Foster, Browns Mills, N. J. No. 1,108,566.

feed container. The fowl must fly up to platforms in order to reach the feed in the troughs. The inventor's idea is that feed falling in the litter will be consumed by birds attracted by the baited pendulum and exercising for the scratch feed, and that all spilled feed from the troughs will be promptly consumed with no danger of lying around until it is in an unfit condition for food. Patent 1,108,566.

James J. Harper, Defiance, Ohio, has patented an egg tester by which a tray of eggs may be tested rapidly. No. 1,108,364.

RED AND SPECKLED SUSSEX ADMITTED TO THE STANDARD.

WE are pleased to state that the great A. P. A. convention at Chicago, closed with Red and Speckled Sussex admitted to the Standard. This was done the last day. Dr. Woods failed to get them on the list in his article in the September A. P. J. A picture of a pair of Speckled will appear in the new edition of the American Standard. This will double the demand for the already very popular Red Sussex, and make the Speckled Sussex. Next year will see a great increase in the demand for the Speckled. Will you be ready to help out by raising as many as you can?

The question is often asked, "Wherein do Red Sussex differ from Single Comb Rhode Island Reds?" They differ in size and type, which are quite like the Rock, and the color of skin and shanks is white. The plumage is darker. The English Standard has no undercolor clause, but the American Standard will call for a grey and red undercolor in males, and grey in females. Using the grey undercolor is what produces that dark rich red and eliminates buff. A solid red hackle is now being produced, but a delicate striping on ends does not disqualify. A year or two of select breeding will have done away with any trace of black. The tail should be glossy green black, but a very red male with coppery colored tail will produce clear backed pullets when mated to very dark females.

The Standard weights are: Cock, 9 lbs.; hen, 7 lbs.; cockerel, 7½ lbs., and pullet, 6 lbs. It is easy to exceed these weights, especially in adult birds. The type of the Sussex females is right for heavy egg production, and the near future will see Sussex the nearest approach to the 300-egg hen yet before the poultry public.

The chicks outgrow, by actual test, any chick ever hatched, and are at a broiler age the soonest. Sussex will revolutionize the broiler business, and as soon as they can be raised in large enough numbers Red Sussex will stock the large utility farms. They have the staying qualities to make them last.

When we get a breed that will make good in any climate at any time and produce delicious meat and quantities of eggs, there is no question as to their becoming the most popular breed in their adopted country, as they now are in England.

If one wants a breed entirely different than the other fellows, and yet not sacrifice the utility qualities of Red Sussex, Speckled Sussex is it, and they are very beautiful, too. While red is the most popular color in America today, as any show room will bear out, the Speckled Sussex will fast become a close second. Green-black, white and red as bred on Speckled Sussex is so striking that even the indifferent will take notice of a flock of them.

Speckled Sussex, like the Reds, are great layers and equally as fast growers. They make beautiful dressed poultry, and like all white breeds, the meat is delicious, and pronounced the best by epicures.

The European war will prevent importing and it is up to America to supply the trade. At present the supply is limited and the first to realize it will be the fortunate ones to get started right.

H. H. Coburn.

Marysville, Mich.

TIMELY POULTRY TOPICS.

BY PLUMMER M'CULLOUGH.

WE have been putting up a fight against lice for the past few days. One of our colony houses had not been cleaned out for some time. We were so very busy with farm work that we were compelled to neglect such little jobs for a while, and this one colony house that had housed a pen of breeding birds the past season and, in fact, it still houses them, as this house is down along the pasture field with running water very handy, and it made a splendid place for a pen of breeders. They laid splendid all spring and summer, but for a short time past have let up on the egg yield considerable. This was nothing unusual in very hot weather and I thought little of it. However, upon making an examination a few days ago I found quite a number of lice sticking under the roosts, and this always puts me to work right away.

The first thing I did was to clean all litter and droppings out of the house, and then I removed the roosts, the nest boxes, the food hoppers and everything that was loose that was in the house. I then mixed up several gallons of Zenoleum and with a brush I was ready for business. I prefer a good hand sprayer for putting it on with, but mine was out of working order and I made a wide whitewash brush answer the purpose. I made the Zenoleum somewhat stronger than the directions called for such work, as I wanted it to be effective, and I went all over the walls, in the corners and in every crack and crevice where I thought a louse could squeeze in. I then thoroughly went over the roosts, nest boxes and hopper in the same manner. After I was thru going over the side walls there was enough disinfectant that had run down the side of the walls to wet the floor nearly all over and this made it that the whole inside of the house was thoroughly covered with a good coat of Zenoleum, and I don't believe you can find a louse or mite in the house alive today. I will give it another going over in a week or ten days to kill any new arrivals that might have appeared.

I don't believe there is anything better for a spray or disinfectant than Zenoleum. I have used it three seasons now with absolute satisfaction.

There is one thing that we must do with any louse-killer if we expect it to do us much good, and that is to use it freely. We cannot expect any of them to kill the lice if we fail to put it on. If we leave it in the can just as we got it and fail to do our part, we will have just as much trouble with lice as if we didn't have the louse-killer. Don't be afraid of getting your hands stunk up a little. It will all come off again, and if you are so stylish that you cannot handle any kind of disinfectant, then I would advise you to get out of the poultry business soon.

* * *

Our friend D. Lincoln Orr in R. P. J. makes it plain to his readers that if he is called to judge any poultry shows in the future he will not disqualify a bird for down between toes. On the other hand, if the bird is worthy he will pull out the down and award the bird a prize. Mr. Orr holds that it is wrong to disqualify an otherwise good bird for a mere bit of down betwen toes, and in this Mr. Orr is, I think, entirely right. The A. P. A. made a mistake when they made down between toes a disqualification in clean shanked varieties. In my opinion it should be a defect, but not a disqualification. However, the present Standard makes it a disqualification, and until it is changed I believe we should apply this disquali-

White Runner Ducks
None Better

We exhibited no Reds at Cleveland, no Orpingtons at Iowa, no Leghorns at Michigan or Iowa. We exhibited a different string of birds at each Fair, proving the fact that we have more good birds than ever before.

In union there is strength and no where is it better proven than in the United Poultry Farms. Our savings in expenses is beyond expectation. We are therefore in posititon to furnish you **Exhibition Birds, Selected Breeders,** or the **Best** of **Utility Fowls** at **greatly reduced prices.** Send for our **Sale Lists**—they are free. State variety you are interested in.

Our Service Department is in position to secure for you anything you want in **Fancy Poultry, Ornamental Birds, or Dogs.** A pleased customer every time has been our motto for the past thirty years. Write us your wants please.

fication just as we do any of the others. I can see no reason for pulling out the down and awarding the bird a prize, as that will not remove the disqualification from the Standard. What Mr. Orr wants to do is to go to work and get this foolish disqualification knocked from the Standard. By so doing you can bring about this reform much quicker and I believe much better than simply ignoring the Standard. I don't like that idea at all. If we could all simply ignore the Standard in certain disqualifications that don't suit us, where would this business end? For instance, I never thought it hardly fair that Wyandottes should be allowed one-quarter white in ear lobes and Plymouth Rocks to be disqualified for a bit of white as large as a pin head. According to Mr. Orr's plan, I would give the prize to a Rock even if it had

The above is a photo of the head of "Gallant," a noted Single Comb White Leghorn male on the Granock Farms, Poughkeepsie, N. Y.

some white in ear lobes, and there are others who might think that it was wrong to disqualify a Barred Rock for a mere bit of red about the size of a nail head, but nevertheless it is a disqualification, and if we ignore it and pay no attention to what the Standard says regarding it, we are simply not living up to the Standard. I can't see for the life of me what the use is of having a Standard if we are not going to apply the whole of it. I am not fond of disqualifying an exhibitor's birds, as some think—in fact, I would much rather not find a disqualified bird in the entire show, but if I do find one and it is disqualified, even for down between toes, I believe it is my duty to throw it out. I always thought that a judge should follow the Standard closely, even if it didn't always agree with his own personal ideas. The association that hires a judge expects him to judge according to the Standard, and hires him for this purpose, and not to put into practice any of his pet ideas. At least, this has always been my own opinion. I hope Mr. Orr will succeed in getting this measly disqualification erased from the Standard, and I would be just as glad to see it go as he, but until it is put out in a proper way we must make use of it.

* * *

There are many methods of feeding chicks, but I believe if anyone will give hopper feeding a trial once they will not want to go back to any of the methods of hand feeding. The past few years we have followed the hopper

method of feeding, and I want to say it is far ahead of the old method of hand feeding. If the chicks have a good supply of food where they can get at it whenever they want it, they will grow up much more uniform than if they were given a stuffing two or three times a day. The great trouble with hand feeding is that the strongest chicks get most of the food, and if the smaller or weaker ones get any at all they are half tramped to death in getting it. For the chicks I have always used the common wall hoppers, but I believe for feeding grain the new automatic feeders would be much better. Last spring I used two automatic grain feeders in two of my breeding pens, and I was highly pleased with them. I consider them a great labor saver, and then, too, the birds can get the food whenever they want it, which is a great advantage. As soon as I can afford it I want to be able to feed all our stock with these automatic feeders, as I think they are one of the best feeders made, and I can highly recommend them to poultry raisers who cannot take the necessary time to feed properly by hand.

* * *

It was always a puzzle to me to see how particular some of our poultry magazines are about some articles sent them by breeders. They will not publish anything but what is "real good," but to fill up their pages they will often print a lot of old stuff that is so stale that you can taste the must on it as you read it. The paper that has space to publish a lot of rot like this should not refuse any real stuff even if it is written by a busy farmer or poultryman.

* * *

We are glad to learn that F. W. Corey has returned to the East and will help place the awards at some of the leading shows this season.

* * *

Chas. T. Cornman has little use for the bleaching of white birds for exhibition purposes, according to his recent article in the Poultry Item. Among other things Mr. Cornman says: "I can take a bird, bleach it with acid, wash it in water colored with bluing and win in the largest shows in America, and the man showing a bird in its 'natural condition' equally as good in all Standard requirements cannot win a ribbon because he either has not learned the trick or is too honest to apply it."

While it is true that many breeders do bleach birds, I don't believe it always is a fact that every or nearly every winner in our leading show is bleached. There are a certain class of white birds which are dead white at all times, and these birds are not improved by anything but washing and properly conditioning. The fact of the matter is that a great many of the men who are making such a big fuss about

$1 A Dollar Bill $1

Brings This Quarter-Bushel Feeder to You!

Since automatic poultry feeders were first introduced there has been a crying demand for a high-class feeder at a low price.

Realizing this, we have for the past year been perfecting a feeder that embodies all that any other feeder does and just a little bit more.

We have tested it and in each and every case it was pronounced perfect—not one single fault could be found—therefore we have given it the title of the

SIMPLEX Faultless Feeder

The Feeder Without a Fault

Patent Applied For

This feeder will not clog—the wind cannot operate it—it insures proper feeding—decreases feed bills and increases egg production. Bait bar operates rotary, thus scattering the feed thoroughly. Feeds anything from whole corn to millet seed. Made of best grade of galvanized iron—no parts to break, become loosened or get out of order, there being not one particle of solder used throughout its entire construction.

Read this guarantee—then order. If you are not entirely satisfied with this feeder you may return it within thirty days and we will refund your money.

THIS FEEDER IS MADE IN THREE SIZES

Quarter-Bushel, $1.00 Half-Bushel, $1.50 One-Bushel, $2.00

WE STRIVE TO DO THE IMPOSSIBLE—PLEASE EVERYONE

French's Poultry Mustard

The Original Poultry Mustard in America. Absolutely pure and prepared to produce most excellent results. Used and highly recommended by thousands of breeders, fanciers and practical poultrymen the world over.

Can Be Fed Any Time of the Year

Most satisfactory results have been obtained by its liberal and constant use. It stimulates and invigorates. It rebuilds and strengthens lost and waste tissues; It SHORTENS THE MOULTING PERIOD, and starts the hens laying. A fair trial will convince you of its worth. Avoid counterfeits and don't accept substitutes. Insist upon having **French's Poultry Mustard.** Buy it from your dealer, or send to us direct.

Our 32-page booklet giving Mr. Ralph Allen's experiments in England, together with other articles on Mustard and testimonials from prominent poultry raisers is sent free of charge for the asking. Write for this today. Address

bleaching birds have never been able to breed them so they will stay white. There are a lot of people in this country that don't know what a real good white bird is. I am not meaning Mr. Cornman, as he is a good judge of any variety, but I say there are people who do not know this fact and some of them pretend to be authorities, too. I tell you, friends, when you get a real dead white bird that is bred white and that will stay white thru moult and all thru the summer, you have a bird that will not need much bleaching. It is true, I am sorry to say, that there are some people who resort to using acids to bleach creamy or brassy birds, and I, like Mr. Cornman, would be very glad to see such work stopped, and the sooner it is done the better for all concerned, but still I believe the man that has a real dead white bird that is free from any creaminess or brassiness will not need to stay at home from the shows on account of meeting the bleached birds. At least I hope that he will not do so.

* * *

For the past season we have had a small pen of Black Leghorns. We got these birds more for experimenting than anything else, and I am at a loss to know why they are not more popular. They are splendid layers, fast growers and a very beautiful fowl. Really if I was a beginner I would take up some of these old neglected varieties like Black Leghorns, Dominiques, Red Caps, Javas and a few more, than I would some of the newer varieties. There is room for some one to do something along this line.

* * *

Every year shows a few new poultry shows starting up and in nearly every one of these shows there are a lot of silver cups given as specials. While a few silver cups are all right and while they look nice, I do believe that there are many things that could be given as specials that would be of much more use to the average poultryman than silver cups. This is especially true of the smaller shows where the exhibitors are nearly all poor people. You know silver cups are not going to buy us our bread and butter. Fencing is something that every poultryman needs, and a special of a ten or twenty rod bale of fencing would do the average exhibitor more real good than a silver cup. Food hoppers, drinking fountains, portable hovers, brood coops, exhibition coops, small incubators and dozens of other articles that a poultryman could make real use of would, I believe, be of more real use to us than so many silver cups. Think this matter over.

J. Quincy Dawson Dept. D Coshocton, Ohio

CURRENT NEWS OF THE POULTRY WORLD.

By J. F. Schureman.

C. J. Schulz, state superintendent of public instruction of Minnesota, reports that poultry keeping is now taught in all the high schools of that state in which there are agricultural departments, or a total of 107 schools. The importance of the poultry industry and of a knowledge of poultry culture seems to have impressed itself upon the authorities of that state.

J. D. Heck, of Drakesboro, Ky., owns a gander which he claims was hatched in 1881 and a goose that was hatched in 1884. If Mr. Heck's statement is true—and he claims he can prove it—the gander is 33 years old and the goose 30 years old.

According to a report just issued, the state of Michigan has a poultry population of 13,654,838, with a value estimated at $7,678,012, counting only the poultry on Michigan farms. The count, which was made by the Michigan Agricultural College, was made by taking the figures gathered during the last census and adding to them a sum equivalent to a 37 per cent increase in the five years since 1909.

Ten buildings, including the big poultry exhibition building, on the Wisconsin State Fair grounds at Milwaukee were destroyed by fire in the first week in August, entailing a loss of nearly $100,000. The origin of the fire is unknown and an investigation is being made by the state officials. It is supposed to have been of incendiary origin. The annual state fair will be held in spite of the destruction of the buildings.

J. E. Ford, of Wichita, Kans., has a Barred Plymouth Rock pullet that was hatched the latter part of February and began laying the middle of July, laying her first egg when 4 months and 10 days old.

A new building 75 by 100 feet in size is being erected in Houston, Tex., by the No-Tsu-Oh Association of Houston, in which to hold the annual exhibitions of the South Texas Poultry and Pet Stock Association. The building will be well lighted and ventilated and will be one of the most up-to-date poultry exhibitions in the country.

The poultry flocks in the vicinity of Hurrfville, Pa., have been attacked by a strange disease hitherto unknown in the poultry world. One farmer who picked up 30 dead chicks in an hour claims that the birds showed no symp-

White Leghorns—YESTERLAID Strain Pullets lay at 4½ months. Bought by 20 Experiment Stations. All stud males grand-dam record of more than 440 eggs in 2 years. Prices very reasonable. Our methods bring success. Details free. YESTERLAID EGG FARMS CO., Dept. 5, PACIFIC, MISSOURI.

toms of the malady until a few minutes before they died. Another breeder who lost 200 in a single day expressed the belief that it was some form of heart disease, while others say it is apoplexy. Poultry specialists who have made an investigation are unable to account for the sudden deaths of the birds or to name the disease.

B. F. Cook, formerly a commercial traveling man of Spokane, but who now owns and operates a poultry farm near Chewelah, Wash., has an Indian Runner duck hen that is sure making some laying record if reports are true. Mr. Cook claims that this duck has laid two eggs in a single day on at least twenty occasions. He says she laid two eggs a day for five consecutive days, then for several days laid two every otner day and one on the alternate day, and then changed the program by laying two eggs one day, one the next and none the third day. She kept this up until she had laid two eggs in a single day on twenty days. Next!

The poultry associations of the state of Washington have been hit a hard blow by the decision of the State Supreme Court declaring the law allowing county commissioners to make grants to county fairs and poultry associations invalid. The law, which was passed eight years ago, empowered the commissioners of each county to appropriate $250 to each county fair and poultry association. The knocking out of this law will work a hardship on many of the poultry associations of the state, especially the smaller ones.

The poultry breeders of Connecticut are the first to have their hens tested for ovarian infection by state experts, who have discovered a method for detecting its presence. In the not far distant future a certificate of health for every flock may be required before the owner can make interstate shipments of either poultry or eggs for hatching.

Frank Dilla has sold his poultry plant, located at Jackson, Mich., together with the stock, to Horace DeLisser, of Long Island, N. Y., who will continue the business. This is one of the most up-to-date poultry plants in southern Michigan.

The buildings on the poultry ranch of A. J. Palutois, located near Ramona Park, St. Louis county, Mo., were recently destroyed by fire, together with 2,000 chickens, all high-bred stock and many of them imported. The loss on the buildings was $4,000. A gasoline engine exploded, setting fire to the buildings.

Licene

Means Guaranteed Lice Exterminator

Has No Equal for Scaly Legs Applied Twice a Year

Used on many large farms and universities. Sold on its merits. Money refunded if not satisfactory.

RAISE EVERY CHICK on "HEN-E-TA" "HEN-O-LA" The *Phosphatic*-System!
The more phosphorus in the egg and the more phosphorus in the egg-shell, the greater the fertility, the better the hatch and the hardier the new-born chick.
The Hen-e-ta-Hen-o-la System eliminates all bowel-trouble; reduces mortality to a minimum; grows and develops the chicks faster and cheaper into strong, rugged, healthy "egg-producing" birds.
Ask your dealer or write us for new booklet, entitled: *"The Successful Way to Grow Little Chicks."*

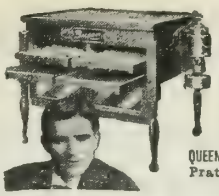
FRED W. MORSE CO., Mfrs., Providence, R. I.

THE NEW YORK STATE FAIR.

Seventy-Fourth Annual Exhibit Is Greater Than All Predecessors. The Poultry Exhibit the Feature Show—Ideal Conditions and Management.

For several years the poultry display at the New York State Fair has been climbing and reaching for the record marks; year by year great displays have been seen and each year seemed the climax of that which could be accomplished. But the end or limit had not been reached and those who fortunately saw this year's show saw the largest and best exhibit ever held at this great fair and most probably the best ever shown at any fall show.



To Superintendent Wm. H. Manning every consideration and credit are due, he attracts like a magnet and the breeders and visitors alike feel glad they came. His work has been along the uplift lines and will ever remain as a brilliant example of what is possible to accomplish. To the commissioner in charge, Mr. Geo. W. Driscoll, also mention is due, for he has labored along with Mr. Manning with unusual ability. These are also the men that the poultry breeders can thank for having the new poultry building, one of the largest and finest in the country. This building is an ideal, made of brick, iron and concrete, with excellent light, ventilation, new coops, etc., of which we wrote last year. Mr. W. M. Anderson assisted Mr. Manning as superintendent, a born poultry fancier, a tireless worker and a grand good fellow in every way. We did not hear the slightest protest or bit of discontent of any kind. The judging was classy and all happy.

The total entries numbered 3,432, and with the pens and displays included there were easily 6,000 or more specimens shown. There were 338 Plymouth Rocks, 493 Wyandottes, 440 R. I. Reds, 96 Brahmas, 105 Langshans, 667 Leghorns, 279 Minorcas, 98 Anconas, 328 Orpingtons, 154 Campines, 664 Bantams, 35 Turkeys, 440 Ducks, etc. These were the leading classes, others were in good proportion, making a very complete display with usual grand quality.

This year again found many of our best known breeders contending for awards and competition was of the very strongest in all the classes; records were made, and as you read of them consider them made under the best and greatest possible test for quality and give to the winners the credit due for a mention of any kind here was an assurance of great worth and merit.

The Owen Farms, Vineyard Haven, Mass., with Mr. M. F. Delano in personal charge, exhibited in their several varieties and made a marvelous record, for they breed the popular varieties in which the strongest competition is to be had. In White Rocks they won Cock 2-3, Hen 1-2, Cockerel 1-3, Pullet 1-2, Old Pen 1, Young Pen 1. White Wyandottes, Hen 4, Pullet 2, Old Pen 1, Young Pen 2. S. C. Reds, Cockerels 1-2-5, Hen 3, Pullet 4, Old Pen 5. S. C. White Orpingtons, Cock 1, Hens 1-2, Cockerels 3-4-5, Pullets 1-2-5, Old Pen 1, Young Pen 1. Mr. Delano also won the Display Specials on White Rocks and Orpingtons, the Wm. H. Manning $100 Cup for best 10 birds in the show of any one variety, the Park & Pollard $100 Silver Cup and several other cups and cash specials. We have followed this line closely for years and can well say they are better and have more promise in them now than ever before. The Owen Farm quality and condition is evident as never before and Mr. Delano is to be congratulated on results attained. His win of 1-2-5 in S. C. Red Cockerels in a class of 32 birds shown by several of our best-known breeders is a record. These birds were of the one grand type, nice long backs, well carried, fine bodies and extra fine heads, color brilliant, sound and even, a win of exceptional merit and value. Mr. Delano assured us he had a great lot of choice birds in all varieties to sell and win for his customers.

Mr. J. S. Martin, the White Wyandotte wizard of Port Dover, Ont., made his usual clean-up here that he has been in the habit of making ever since the year *One*. This year he had a larger and stronger class to compete against, but it is all the same to him, he sends his birds year after year and takes back gold, cups, ribbons and the good will of thousands of friends and fanciers. Happy Jack Martin, as the boys are pleased to call him, won Cocks 1-2-3-4, Hens 1-2-3, Cockerels 1-2-3-4-5, Pullets 1-3-4-5, Old Pen 2-3-4, Young Pen 1-3-4, Best Display, Rancocas Cup for best 10 Wyandottes any variety, Club Cup for best four birds, etc. Here again we noted the wonderful sameness of the birds in this line. They match one another, look alike and have the same gentle disposition, combs always a feature in this

line, with clear red eyes, sound yellow legs and the whitest of white plumage. The birds were in the best possible condition. It is hardly fair to select any one bird or birds for special mention from a worthy display of this kind, as all deserve mention, but we will jump the bounds just to say that the four cocks shown were models of highest type; just alike in style, heads and finish, and the four best we have ever seen in a show room at this season of the year. The First Pullet a living example of what a Wyandotte should be.

The Rancocas Poultry Farms, Brown's Mills, N. J., made their first display and notable win here last season and came back for more honors which they won in White Rocks and S. C. White Leghorns. As usual this line was, thanks to Manager M. L. Chapman, in most perfect condition, but their White Rocks hardly in best feather. In Rocks they won Cock 1-4-5, Hens 3-4, Cockerels 2-4-5, Pullets 4, Old Pen 2, Young Pen 2. In the S. C. White Leghorns they made a record in this great class, filled with superior quality, they were Cocks 1-2-5, Hens 3-4-5, Cockerels 1-3, Pullets 3-5, Old Pen 1, Young Pen 1, $50 gold for Best Display any one variety, the D. W. Young Cup for best 10 birds, etc. Superintendent Reese V. Hicks, of these farms, came up to see the ribbons hang on their coops and to visit with his many friends there, all of whom congratulated him on the success.

S. C. Black Minorcas were one of the great classes of the show. We think it the second best class we have ever seen and by far the best ever seen at a fall show. Mr. Hiram Denny, manager for Mr. Frank McGrann, Lancaster, Pa., was the happy man, and well he could be, for their winnings were Cocks 1-2-3, Hens 1-3-4, Cockerels 1-2-3, Pullets 1-2, Old Pen 2, Young Pen 2-3, Special Best Display and all Specials. This line is a marvel in shape and style, of extra fine size and positive sound color; condition extra good.

The Sunswick Poultry Farm, South Plainfield, N. J., S. C. Buff Orpington specialist, made a beauty exhibit in this great class of 185 birds, they winning Cock 1, Hen 1-2, Cockerels 1-2, Pullet 2, Old Pen 2, Young Pen 1, Special Best Display, etc. Their winning hen in size, form and color was the beauty of the class and their two winning Cockerels grand strong fellows, very even and rich color. Mr. Delafield, the owner, was in personal attendance and has reason to feel well over the record his birds made here. It is a staple line that is strong every day of the year. Mr. Hobbs, formerly of the Joe Pye Orpington Farm, is now connected with Mr. Delafield.

The Monmouth Farms, Freneau, N. J., Mr. J. Courtney Punderford, owner, exhibited their lines of S. C. Buff and White Leghorns, winning in Buffs Cock 3, Cockerels 1-2-3, Pullets 1-2-4, Young Pen 1, Special Best Display and color and shape specials. In Whites they won (showing young birds only) Cockerels 2-5, Pullets 1-4, Pen 3. Mr. Punderford has bred his line of Buffs to the size and shape we find in the best Whites and with beauty head points, low-carried tails, etc. The first cockerel a grand specimen, very even and sound color.

The Yama Farms, Napanoch, N. Y., with manager Newton Cosh in charge, exhibited their Barred Rocks and S. C. Black Minorcas and as usual made a clean-up win in the Rocks, as follows: Cocks 1-2-4-5, Hens 1-2-3, Cockerels 1-2-3, Pullets 1-2-3, Old Pen 1-2-4, Young Pen 1-2-3. In Minorcas they won Cock 5, Hens 2-5, Cockerels 4, Pullet 4-5, Old Pen 1-3, Young Pen 1-4. This line of Barred Rocks has been very favorably known for several years and their winning record is a long one. The birds seen here were beautifully barred and of the proper color, heads very good.

S. C. White Orpingtons numbered 90 birds and were shown by several of our best breeders. Like last year, it was hard picking, as competition was very strong. Mr. P. A. Demgar, Brown Station, N. Y., made his first great record here one year ago, and this year in a larger and surely stronger class he made what we consider a better win than ever before: Cocks 4-5, Hen 3, Cockerels 1-2, Pullet 4, Old Pen 2-4, Young Pen 2-3-4, Special Second Display, etc. His winning cockerels and cockerel in Second Pen were of the type and quality sure to win and to breed winners. Mr. Demgar has by careful breeding placed his line up for notice and it surely deserves all consideration.

Buff Rocks was the best fall class seen in years, both in numbers and quality, with 93 birds in line. Mr. E. H. Lichtenwalter, Girard, Pa., winning the big share of prizes, as follows: Cock 1-4, Hen 1-4, Cockerel 5, Pullet 1-4, Young Pen 1, Special Best Display. His winning hen an unbeatable bird, shown at her best, sound, even color and beautiful form.

The Sunnybrook Farm, Eatontown, N. J., Mr. Chas. D. Cleveland, owner, led the way all along the line in Columbian Wyandottes; it was a surprise to note the quality of their

OLD FORGE POULTRY FARM
SPRING GROVE PENNSYLVANIA

birds, the clean-cut marking and beautiful shape were features, the first Young Pen superbly mated, extra condition and strong in every desired quality, tail coverts and wings very, very good. Their winnings are Cock 1-2, Hen 1-3, Cockerel 1, Pullet 3, Young Pen 1, Special Best Display.

The S. C. Rhode Island Reds were the banner class at the show with 122 single birds and 32 pens, making a total of 282 birds. Houck & Alt, 87 Fuller St., Buffalo, N. Y., nearly repeated their win of last year, their effort was a grand one and they well deserved all they won. Cock 1, Pullet 1, Young Pen 1-5, Second Display Special, color male, shape female, cup for best pen, etc. In this class it is needless to say that competition was strong. It was of the hottest, and in pens particularly. Their first pen was a model, a good win.

Mr. Geo. W. Tracy, of Kinderhook, N. Y., one of our oldest and best breeders, made a wonderful record by winning First Display and receiving prominent mention in all classes, as follows: Cock 4, Hen 1-2-5, Cockerel 3, Pullet 3, Old Pen 2, Young Pen 3. One of his hens shown had five (5) prize winners in this class, a record of breeding value. What Mr. Tracy considered to be his best pen did not arrive at the show at all, being lost in transit.

We have before mentioned the Owen Farm winnings in this class and we imagine we still see their beautiful cockerels.

Other winners were: Wyebrook Farm, Frank Griffing, Union Poultry Farm, Orchard Farm, W. M. Willets.

In R. C. Reds the winners were H. E. Humphrey, Greenwich; H. E. Cheesebrough, Greenwich; H. L. Ferris, Auburn; W. W. Hazelton, Hudson; Orchard Farm, Darian, Conn.; Lewis Lane, etc.

Fairfield Farms, Fayetteville, N. Y., won in S. C. Buff Orpingtons Cock 3, Cockerel 5, Pullet 3, Old Pen 1-4, Young Pen 5.

A nice class of Silver Wyandottes was seen here, first cockerel owned by J. Frank Van Alstyne, Niverville, N. Y., was an attraction, a clear silvery bird, Mrs. Denton Cole, Binghamton, N. Y., winning first cock and hen.

The exhibit of Harvey C. Wood, Bound Brook, N. J., of Light Brahmas was a handsome collection, he winning all first prizes.

R. C. White Leghorns, a large class with many birds of exceptional merit. In shape, size and carriage they are progressing. The winners included A. F. Almendinger, Buffalo, N. Y.; Mrs. W. L. Haynes, Norwich, N. Y.; Geo. W. Pearson, Trenton, N. J.; Chas. Damon, L. H. Perry, etc.

S. C. Anconas numbered 94 birds. The winners: Joel Bean, Syracuse, N. Y.; H. H. Glosser, Fort Plain, N. Y.; Geo. W. Barstow, Oneonta, N. Y.; El-Co-Va Farm, Verbank, N. Y.

S. S. Hamburgs, one of the best classes ever; the winners were: A. L. Mayo, Pittston, Pa.; J. J. Bryden, C. W. Williams, Furmaux Bros., St. Catharine, Ont., etc.

Silver Campines numbered 113 birds. The winners: The Martling Hennery, Ridgefield, N. J.; Homestead Campine Farm, Wayland, Mass.; McDonough & Bidwell, Newark, N. Y.; Jos. C. Jackson, St. Thomas, Ont.; Rev. W. Berberich, Groton, N. Y.; F. E. Dutton, Fayetteville, N. Y., etc.

White Faverolles, a nice class, with D. Lincoln Orr, Orr's Mills, N. Y.; Dictograph P. F., West Nyack, N. Y.; Geo. H. C. Hole, Cornwall, N. Y.; Lew H. Bown, East Aurora, N. Y., the winners.

Buttercups, a very large class with many very fine birds seen, the winners a particularly fine lot.

Sussex, a small class of good birds. First Red Cockerel shown by Mr. W. M. Patterson, Penn Yan, N. Y., a rich one.

Dark Cornish, a very fine class of quality birds, handled grandly by Judge John W. Ward. Mr. Courtland H. Smith, Warrenton, Va., winning Cock 1-3, Hen 1-3, Cockerel 1, Pullet 3, Old Pen 1-2 and Best Display.

Bantams in all variety were seen, the Black, Reds, Duckwing, Pyle and Cochins leading in numbers.

Turkeys a large display, also of Ducks and Geese. The Ducks in particular were a select and large lot, with all varieties well represented.

Pigeons numbered nearly 600, with all varieties shown.

A nice select line of Pet Stock completed the display.

Come next year and make this Empire State Fair Greater and better than ever.

H. P. SCHWAB.

Poultry Diseases and Their Treatment

By F. A. Kaupp, M. D.

A book containing 185 pages, 5x8 inches in size and is profusely illustrated with original half-tone and pen and ink engravings. It shows the many parasites, germs, and bacteria that attack our poultry, as well as tells the names of the diseases, the cause or causes, the symptom and lastly the *treatment for each disease.* The book is printed on a high grade super calendared book paper, substantially bound in cloth, linen sewed to make it flat opening and the title is stamped in gold. Every poultryman should add this very useful book to his library. Remember that we prepay all charges on the book to your town.

The Palace Show.

BY CROMWELL CHILD.

The Palace Show is to start the ball a-rolling for the season of 1914, and it will be by far the finest and largest that the very successful and progressive Empire Poultry Association has put forward in its eight years of active life.

A small show out in Richmond Hill, L. I., practically only a "one-horse" affair in 1906, it has developed steadily each year, pushed its way into the metropolitan field, made itself one of the "Big Four" among poultry shows, jumped 50 per cent in number of exhibitors from 1912 to 1913—last year showed this extraordinary advance—and now, with very greatly increased space engaged, promises a show for this December that is to set a pace all through poultrydom.

The first floor of the Grand Central Palace, New York, the Palace Show's scene last year, is big enough, it would seem, for any poultry show, but for this eighth show (in the first week of December) the second floor will be taken in addition. Here cats, pet stock, pigeons and a new and very interesting feature—a model poultry farm—are to be shown. The main floor will be devoted to poultry exhibits exclusively, and it looks as if every foot would be used. This year, too, the supply houses are coming in very actively and have taken all available space. The outlook could not be better, especially when it is considered that pledge after pledge of support has been received, making a formidable and gratifying mass of documents, and that 60 per cent of the old exhibitors have promised to come back. Last year the Palace Show was

(In no way connected with any other Co.)

given the appropriate name of the "Lucky Seventh." It proved lucky for everybody. This year the show will be the "Big Eighth," or, as some enthusiasts have already dubbed it, "Our Grand Reunion Show."

There are plans for the biggest campaign of publicity during the show of this year of any show that has ever been held. In a measure this publicity will be the "Big Eighth's" greatest feature. The publicity will spread widely, will be heard of on every hand, for in this show there will be much to talk about, and amount of interesting, unusual details for the breeder and for the public. It is to be a year of specialty clubs; the cat show in conjunction with it will be the largest cat show in New York this season, the model poultry farm will be a great and picturesque demonstration of modern science in poultry breeding—it will, by itself, attract thousands of visitors—and there is little question but what the classes will bring out unprecedentedly keen and brilliant competition.

To the exhibitor all this means everything. The Palace Show is to be the first show of the season. Those who win at it will at once have at their hand fine ammunition for an advertising campaign. The whole show season is before them; they can turn their victories to excellent account. There is ample time for awards and advertising to appear in the January issues of the poultry press. The man who makes things go needs copy for the press. His light must not be hidden under a bushel. The man who misses the Palace Show loses this opportunity. He can make much of it, and many an exhibitor will. On the other hand, should he lose, the whole show season is before him, with many other chances of wins. A win at this first show will count, however. There is much more time to take advantage of it.

Many a far-sighted breeder, the indications are, is seeing this year, and both old and new exhibitors will compete actively. The Palace Show during its New York existence built up an almost new clientele. Steadily this is being added to. Many breeders who did not at first look on this show with an altogether friendly eye have been won over. Many new pledges have come in from substantial men in the poultry field.

It will be a show of sociability, with many banquets and meetings. The exhibitor will have a chance to get acquainted as he has never had before. You may meet your competitors and the editor of your favorite paper, and plan your campaign for the year. Only at the Palace Show is this really possible, for then is the season's opening. The model farm, with all the latest appliances of poultry culture, will give you many new ideas. There will be shown, on a large scale, such as never before in a show, or anywhere else, laying houses with runs, brooder houses with chicks, even the mother with her broods. Demonstrations of killing, picking, packing and handling will be given continuously and lecturers will be on hand to advise breeders and visitors.

The files show fairly accurately what is going to happen. This is to be a Campine year, and great efforts are to be made with this breed. It will be a Buttercup year as well. The brilliant success of the Buttercups in 1913 is to be more than duplicated. It is believed that the Palace Show of 1914 will present the greatest showing of White Leghorns ever. White Orpingtons are to be especially fine. Reds, Buff Leghorns, Minorcas and White Wyandottes will be well to the fore. The exhibitor should remember that there is a premium of $5 on a $2 entry fee. At the show's head again are Robert Seaman as president, L. D. Howell, secretary and treasurer. Other familiar figures in the management will be E. B. Sprague, a director, who is making great efforts in the direction of Buff Orpingtons; Brown and Captain Arnold at the gate, and W. H. Hearsfield, who is called "the best superintendent in the country."

Palace Show Judges—Reese V. Hicks, R. I. Reds and Whites; W. B. Atherton, White Rocks, Polish and Hamburgs; Geo. W. Weed, Black Wyandottes and Buttercups; W. H. Card, Brown and Black Leghorns, S. C. Leghorns, all Orpingtons except Buff, Lakenvelders, W. F. Black Spanish; C. H. Shaylor, Barred Rocks; Charles Nixon, White Wyandottes; J. C. Punderford, White Leghorns; H. J. Fisk, Buff Leghorns; F. H. Wolseiffer, Buff Orpingtons and Buff Rocks; J. E. Willmarth, Buff Wyandottes, Buff Col. Wyandottes; D. Lincoln Orr, Columbian Wyandottes and Brahmas; F. C. Sites, Anconas, Cochins and Langshans; D. M. Green, Columbian Rocks; Paul W. Doll, Silver and Silver Pen. Wyandottes; H. P. Schwab, Silver Pen. Rocks, Golden and Golden Pen. Wyandottes, Cookoo Wyandottes; I. W. Mole, Part. Rocks and Part. Wyandottes; E. F. Aubry, Favorelles; M. L. Chapman, Campines; Rowland Story, Minorcas; C. M. Smith, Houdans; James Glasgow, Games; Newton Cosh, Andalusians; Geo. W. Tracy, Javas, Sussex, Red Caps, Dominiques, Dorkings, Buckeyes, La Fleche and Creve Coeurs; John Brett, Waterfowl, Ornamental.

Bantams—Geo. L. Young, Clean Legged; C. M. Smith, Feather Legged; James Glasgow, Games.

Pet Stock—Robert Whitaker.

Pigeons—F. Warren Snow, Frank Gorse, C. E. Twombly, Geo. B. Hart, with others to be added.

The Big Boston Show.

"The Old Glory Show" is the slogan for the 1915 exhibition of the Boston Poultry Association, to be held in the great Mechanics' Building, January 12 to 16. The magnitude of the last show attracted the attention of breeders throughout all America and even across the water, and already many who have never exhibited at Boston have signified their intention of making entries at the coming show.

Many specialty clubs have already selected Boston for their annual meet. The American Waterfowl Club are coming and will offer several hundred dollars in cash specials. The American Buttercup Club and the New England Buttercup Club will hold a joint meet, and a great showing of these birds is expected. Bantams are likely to come out in force, as both the National Bantam Association and the Game and Game Bantam Club have decided to hold their yearly meet at the Hub. The Hamburg Fanciers' Club, the Partridge Wyandotte Club of America and the Crested Fowl Breeders' Association have also selected Boston, and other clubs are expected to take similar action.

Boston was the first show to inaugurate a department for live utility fowls, and this section will be continued, as well as the dressed poultry and egg department.

The Boston Show has grown to such proportions that many space concessions granted heretofore will have to be refused, but the usual space will be utilized for incubators and poultry supplies.

The premium list will be out about December 1.

W. B. Atherton, Secretary.

Boston, Mass.

Rhode Island Red Specials for Chicago.

The Great Mid-West Poultry and Pet Stock Association will offer on both the Rose and Single Comb Reds, regardless of number of entries, a $50.00 diamond scarf pin for best display, as per Rule 17.

For 75 entries, $25.00 in cash, to be awarded as follows: $15.00 for second best display; $10.00 for third best display.

For 125 entries $50.00 in cash, to be awarded as follows: $20.00 for second best display; $15.00 for third best display; $10.00 for fourth best display; $5.00 for fifth best display.

For 150 entries $75.00 in cash, to be awarded as follows: $25.00 for second best display; $20.00 third best display; $15.00 for fourth best display; $10.00 for fifth best display; $5.00 for sixth best display.

For 200 entries $100.00 in cash, to be awarded as follows: On cocks, for first, second, third, fourth, fifth, sixth, seventh and eighth, $2.00 each. Same on hens, cockerels and pullets. On old and young pens, $3.00 for first; $2.00 each for second, third, fourth, fifth, sixth, seventh and eighth.

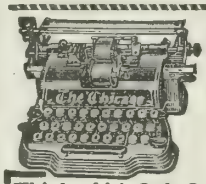
For 250 entries $125.00 in cash, to be awarded as follows: Same prizes as above on single entries. On old and young pens, $4.00 each for first, second, third, fourth, fifth, sixth, and $3.00 each for seventh and eighth.

For 300 entries $150.00 in cash, to be awarded as follows: On cocks, $3.00 each for first, second, third, fourth, fifth, sixth, seventh and eighth. Same on hens, cockerels and pullets. On old and young pens, $4.00 each for first, second and third. $2.00 each for fourth, fifth, sixth, seventh and eighth.

For 600 entries, $300.00 in cash, to be awarded as follows: Cocks, $5.00 each for first, second, third, fourth, fifth, sixth, seventh and eighth. Hens, cockerels and pullets the same. On old and young pens, $10.00 each for first, second, third, fourth, fifth and sixth; $5.00 each for seventh and eighth.

Note that these prizes are offered on both the Rose and Single Combs. Should both classes fill, then these totals are doubled. Should one fill and the other fail to fill, the one that does fill will receive the prizes. Should one variety have 600 entries, it will receive the $300.00 cash. Should the other variety fill any one of the lower classes, then the prizes will be paid according to the schedule the entries denote.

In order to make ourselves plain, so that no one can err, will say that only one schedule can fill on either variety; as, for example: If there are 600 entries, all schedules below the $300.00 cash are void. If there are 300 entries and less than 600, then all schedules below the $150.00 cash prizes are void.



The Rhode Island Red Journal of Waverly, Iowa, A. G. Studier, editor, offers the following prizes on both Rose and Single Combs, for club members only: Cocks, $2.00 each for first and second; $4.00 each for third, fourth, fifth, sixth, seventh and eighth. Same on hens, cockerels and pullets. On old and young pens, $5.00 each for first and second; $10.00 each for third, fourth, fifth, sixth, seventh and eighth.

The Rhode Island Red Journal will also

Don't Feed Green Food!

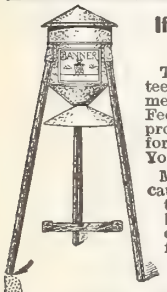
pay the entry fees on the two exhibits coming the greatest distance.

The Red Breeders' Club of the World, Aaron Fell, Perrysville, Penna., secretary, will hold its annual meeting Monday, December 14th, at 2 p. m.



The club offers to club members, whose dues are paid to January 1, 1915, special club ribbons for the best shaped and best colored male and the best shaped and best colored female in both the Rose and Single Comb varieties; a $30.00 silver cup for second best display; a $25.00 silver cup for third best display; a $20.00 silver cup for fourth best display; a $15.00 silver cup for fifth best display.

If not already a member, send $1.00 to Mr. Fell at once and have your name enrolled; or include $1.00 in your entry fee when making your entry. It is best, however, that this money be mailed direct to the secretary.

In order to compete for these specials, exhibitors must have six or more entries. Note these cups are offered on both the Rose and Single Combs. For premium list write Theo. Hewes, secretary, Indianapolis, Ind.

Madison Square Garden.

To American Poultry Journal, Chicago, Ill.

Gentlemen—Following up my recent telegram, in which I announced the dates for our next exhibition, I beg to say that the reason for the change of dates this season is because Madison Square Garden has been rented to a Religious Spectacle play for the months of December and January. This performance is something that has made a great sensation in Europe and is expected to draw such large audiences that Madison Square Garden was necessary for its production.

Our new dates, however, February 12 to 18), will, I believe, be very advantageous, especially this season. The crop of early hatched chickens is very light and the new dates will enable all of the late hatched birds to compete, but aside from this fact it is manifestly clear that February is a very much better time to sell than December or early January. Buyers will come to the Garden this year at just the time when they need stock and it is believed that more sales will be made direct on the floor than at any prior exhibition.

You also, of course, know that the Christmas period is a very hard time in which to attract the attendance of the public. In December and at New Year's people are busy with Christmas shopping and festivities, but as our show this year will open on Lincoln's birthday the public will be free to attend, and I think that with the new features which the show will inaugurate a greater number of people will enter our doors in 1915 than has ever before been the case.

The incubator and poultry supply exhibitors will also have an unusually favorable time in which to sell their products, and I have already been told that it will be impossible to supply the number of day-old chicks which will be in demand at our Twenty-sixth Annual Show.

I have already made some progress toward the completion of arrangements for the coming event, and I am anxious to hear from every Specialty Club in the country, both in regard to Annual Club Meets and also with reference to suggestions for judges. There will be a great many important club meets held at the Garden this year and the attitude of the management will be as before—that of hearty coöperation. I, therefore, invite correspondence from all the club secretaries, and in this connection I wish to say that we will offer no special prizes of any kind or description which we cannot deliver during our show. In other words we desire all cups, medals, ribbons or other specials to be in the hands of the management prior to the opening of the show. Unless clubs can guarantee to do this their offers will not be printed in the premium list. I think it unfair to offer prizes which cannot be delivered into the hands of exhibitors.

A new system of marking up the awards will be inaugurated and all exhibitors will know immediately after each class is judged how the premiums have been awarded. There are a number of other innovations and changes which I believe will be for the benefit of the exhibitors and which I will speak of later if your valuable paper will give me the space to do so.

Thanking you for your courtesy in publishing this notice, I am

Yours sincerely.
Charles D. Cleveland.
Secretary and Superintendent.
Eatontown, N. J.

White Orpington Special.

The American White Orpington Club is offering this season at all of the Poultry Shows in the country handsome white silk club ribbons with gold fringe on the best cocks, cockerels, hens and pullets, and an engraved medal for best pen, and at many of the state shows beautiful silver cups. To compete for any of these specials, you must be a member of the club in good standing with all dues paid in full. The initiation fee, which includes the first year's dues, is only $1.00, or life membership, $5.00. Application blanks, club book, and full information can be had of the secretary, F. S. Bullington, Box 328, Richmond, Va.

Notice to Rouen Duck Breeders.

To the Rouen duck breeder who sends me the best article written on Rouen ducks, containing three hundred or more words, to be used in the year book of the Rouen Duck Club of America, I will send a fine souvenir from Arizona. Also to second best. Winners to become members of the Rouen Duck Club, if not already members.

Send article at once, as this offer closes Dec. 5th, 1914.

Edgar M. LeBaron,
Vice President of the Rouen Duck Club of America.

Notice to Show Secretaries.

The American White Plymouth Rock Club, H. W. Halbach, president, offers handsome ribbons for best cock, hen, cockerel, pullet and pen. The club also offers a silver cup at any show where ten members are competing. Dues are $1.00 a year and should be sent to M. L. Chapman, secretary-treasurer, Browns Mills, N. J.

In our August issue we announced the show dates of the Beloit Poultry & Pet Stock Association as being December 25-30, 1914. This was an error on our part as their dates are January 25-30, 1915. For full particulars address the secretary Guy S. Lee, 737 Grant street, Beloit, Wis.

Write me if you want a really good bird.
MRS. GUY BLENCOE Alma Center, Wis.

The Quincy Poultry, Pigeon and Pet Stock Association will hold its eighth annual exhibition at Quincy, Illinois, November 24-29, 1914. This association owns their own coops and expect to coop at least 2,500 birds at the coming show. J. C. Johnston, D. E. Hale, Chas. V. Keeler, Carl Dare and Adam Thompson will place the awards. The free banquet given each year by this association is one of the leading features. Gold leg bands for champion male and female of every variety, and gold pieces for display in each variety will be given in addition to the regular cash and special premiums. This association is one of the leading organizations of the state and should be liberally supported by every poultryman. Catalog will be ready for distribution October 20. Send for one to the secretary, A. D. Smith, Quincy, Ill.

The Freeport Poultry, Pet Stock and Grain Association will hold its annual exhibition from December 14th to 19th, at Freeport, Ill. Judges Geo. A. Heyl and G. W. Hackett have been secured to place the awards. Uniform coops, furnished by the association free, will again be used. Last year's show had nearly 1,000 entries of poultry, and this year the directors of the association are trying to get the 1,000 mark beat. Fanciers should remember the date of the Freeport show and make arrangements to send their birds where there is some real competition. For information, premium list, etc., send to Paul Wurtzel, secretary, Freeport, Ill.

The Forest City Live Stock & Fair Co. held its second annual exhibit at North Randall, Ohio, August 20-27, 1914. This association has some of the finest buildings of any state and they have spared no expense to make it the best fair in the country. The poultry exhibit was the best I have seen anywhere. There were 5,000 entries regardless of the early date. The superintendent, Sheppard Strong, handled things to the satisfaction of everybody. Heavy rains made it unpleasant getting around, but the attendance was large.—H. H. Coburn.

The following judges have been engaged to place the awards at the Flower City Poultry Show December 7-12, 1914: Haldie Nicholson, Chas. H. Welles, Chas. Nixon, W. H. Card, A. J. Hammerstrom, O. W. Preston, Chas. T. Cornman and Louis W. Hilfiker. For further particulars and premium list address the secretary, J. W. Chapman, Rochester, N. Y.

The Pike County Poultry Association will hold its second annual show at Louisiana, Mo., December 1-3, 1914. Thos. W. Southard will place the awards by score card. Send for premium list to the secretary, C. H. Winn, Louisiana, Missouri.

The First Annual Show of the Elmira Heights Poultry Club will be held December 15-18, 1914. F. L. Bradford, judge. For premium list and further particulars address the secretary, L. G. Woodward, Elmira Heights, N. Y.

The next annual show of the Morgan County Poultry Association will be held at Jacksonville, Illinois, January 18-23, 1915. D. T. Heimlich and I. A. Engle, judges. Write for premium list to the secretary, Chas. C. Weber, Jacksonville, Illinois.

The American Buff Plymouth Rock Club will hold their annual meeting in connection with the Flower City Poultry Show, Rochester, N. Y., December 7-12, 1914.

The Eighteenth Annual Show of the South Texas Poultry and Pet Stock Association will be held in Houston, Texas, November 9-14, 1914. J. H. Drevenstedt has been engaged to place the awards. In addition to the poultry show Houston will celebrate at this time the completion by the federal government of the Houston Ship Channel opening to Houston the ocean commerce of the world. For premium list address the secretary, W. F. Krahl, Houston, Texas.

For some years there has been two shows held in Indianapolis, Indiana, each year, but in the future there will be only one show held and that by the Old Incorporated Show, The Fanciers' Association of Indiana. This association has for many years demonstrated that it holds nothing but quality shows and as all high class shows are now on a basis of $2.00 entry fee this will be adopted by this association for next year. Such judges as Theo. Hewes, W. C. Pierce have been, with others, selected to place the awards. The secretary, C. R. Milhous, Indianapolis, Indiana, will be pleased to give you further particulars and send you premium list. The dates of the next show are February 1-5, 1915.

The Missouri State Poultry Association is planning to hold the largest and best poultry show ever held in the state of Missouri. This will take place in St. Louis, Nov. 24-29, 1914. This show is early enough to get the winnings published in the poultry press in time to make some good sales before the later shows have been judged. The premium list and entry blanks are now ready for mailing and if you have not already filed your name for one you should do so at once with Fred Crosby, secretary, or T. E. Quisenberry, superintendent of the show, Mountain Grove, Mo.

If you want to know something of the One Hundred Dollar Championship stakes to be offered for pullets and cockerels at the Illinois State Poultry Show, Springfield, Illinois, January 4-9, 1915, be sure and drop the secretary, Theo. S. McCoy, Golconda, Ill., a card giving your name and address. The catalog will be full of other good things to the advantage of the exhibitors. The sales department under Mr. Bates will be continued.

The El Paso Poultry Association will hold their annual show at El Paso, Texas, November 26-30, 1914. They are planning to have the biggest and best show ever held in the southwest. For premium list address J. G. Kenan, secretary, El Paso, Texas.

A poultry exhibit will be one of the features of the fourth annual fair to be held at Franklinton, Washington Parish, Louisiana, October 15-17, 1914. There will be no entry fee charged. For full particulars address C. Doremus, Franklinton, La.

The fifth annual exhibition of the Lynchburg, Va., Poultry Association will be held December 8-11, 1914. J. W. Simmons, judge. Premium list ready November 1. Address the secretary, R. H. Anderson, Lynchburg, Va.

The fourth annual show of the Wilson County Poultry & Pet Stock Association will be held at Fredonia, Kansas, November 23-28, 1914. E. W. Cook, judge. For premium list address Karl F. Spellman, Fredonia, Kans.

Without a doubt the best show ever held in Toledo, Ohio, will be held by the Tri-State Poultry & Pet Stock Club, Nov. 30 to Dec. 6, 1914. The judges are Newton Cosh, Frank Conway and J. H. Drevenstedt. The list of cash premiums is very liberal and in addition the Tri-State Poultry & Pet Stock Club and the business men of the city have put up a fine lot of silver cups. Send a postal today to the secretary, A. H. Emch, 638 Division street, Toledo, Ohio, for full particulars, premium list, etc.

The following are some of the inducements offered by the St. Marys Poultry Club which will hold their second annual show at St. Marys, Pa., December 15-18, 1914. A gold leg band to every winner of first in singles where there is competition. $250.00 in cash prizes. $400.00 worth of silver cups. $300.00 worth of merchandise prizes. An egg show without entry fees and offering liberal cash prizes. The attractiveness of the foregoing is manifest when we view their entry fees which are 35 cents for singles and $1.00 for pens. Be sure and write to the secretary for premium list. F. D. Lambert, secretary, St. Marys, Pa.

The Millville Poultry, Corn and Horse Show Association will hold their third annual show December 1-4, 1914. In connection with this show there will be held a Farmers' Institute and Corn Show. This show is the largest and best of its kind in the state. Liberal cash and special premiums will be offered including a number of handsome silver cups. Premium list will be ready November 1. Send for one to the secretary, Cliff Bryant, Hamilton, Ohio.

The Second Annual Exhibit of the Batavia Poultry Association will be held at Batavia, Illinois, December 15-18, 1914. Louis A. Stahmer, the well-known poultry artist of the American Poultry Journal, has been selected to place the awards under the Hale explanatory score card. Premium list ready November 1st. Send for one to the secretary, Charles A. Pierce, Batavia, Illinois.

The Wilkes-Barre Poultry and Agricultural Association will hold their next annual show at Wilkes-Barre, Pa., November 30 to December 5th, 1914. John Kriner and Richard Oke will place the awards. For premium list and further information address the secretary, F. N. Roll, Wilkes-Barre, Pa.

The 22nd Annual Show of the Northwestern Ohio Poultry Association will be held at Tiffin, Ohio, December 29 to January 1st. Thos. S. Faulkner, judge. Empire coops will be furnished free by the association. Twenty silver cups will be offered. For full particulars address the secretary, C. H. Lines, Tiffin, Ohio.

The fourth annual exhibition of the Northwest Poultry Association will be held at Kalispell, Montana, December 14-18, 1914. They are planning on distributing 2,000 copies of their premium list and everybody interested in this show should send for one to the secretary, G. F. Tate, Kalispell, Mont.

We have just received the good news that the Western Wisconsin Poultry Association of La Crosse, Wisconsin, are installing a complete cooping system which is to equal if not surpass any system in the state. Their next show will be held December 1-7, 1914. For full particulars and premium list address the secretary, Wm. H. Hoeschler, La Crosse, Wis.

The Norwalk Poultry Association will hold its annual show at South Norwalk, Connecticut, November, 23-26, 1914. This is the first show of this kind ever held in South Norwalk and they are making great preparations for the event. For premium list and full particulars address the secretary, Charles R. Petty, South Norwalk, Conn.

The fourth annual show of the Emmet County Poultry Associations of Petoskey, Michigan, will be held December 9-12, 1914. Big cash premiums and silver cups will be awarded. Free cooping furnished. For premium list and entry blank address the secretary, S. H. Hoover, Petoskey, Michigan.

The third annual show of the McDonald Poultry Association will be held at McDonald, Pa., December 8-14, 1914. Premium list ready November 1st. Send for one to the secretary, A. V. Campbell, McDonald, Pa.

The Michigan State Poultry Fanciers' Association will hold its second annual show December 5-10, 1914. This show will be cooped by the Keipper Cooping Company of Milwaukee. Premium list ready November 10th. Send for one to the secretary, W. A. Haines, Menominee, Mich.

A New Partnership.

"In union there is strength." So thought Messrs. F. D. Rogers and H. A. Muntz, when, on July 1st of this year they joined forces and formed a partnership, which will be known as Rogers & Muntz. For several years they have been well known as individual breeders, and have been consistent winners in many of the largest shows. Rogers and Muntz first meeting was in the show room, and for several years have been competitors, yet always on most

F. D. Rogers, Elgin, Ill.

friendly terms, and the announcement of the partnership comes as no surprise to those who know them best. Mr. Rogers has been a resident of Elgin nearly six years, having before that time been a resident of New York state. He has been a breeder and admirer of the finest in Standard bred poultry since a mere lad and has gained a national reputation in the past six years as a breeder and exhibitor of S. C. White Leghorns, his birds having won at such shows as Chicago, Kansas City, Peoria, Elgin and many others. As a judge of this particular variety, he is conceded one of the best in America. He is an ex-president of the Elgin Poultry Association, member Chicago Poultry Society, S. C. W. Leghorn Club, and at the present time is president of the board of directors of the Elgin association. Mr. Muntz is a native son of Elgin, coming from one of its oldest and best known families, and as a breeder and exhibitor of S. C. W. Leghorns has established a record that is second to none. He has won in past seasons at Chicago Coliseum, Illinois State Fair, Elgin and other mid-west shows. Last year at Chicago he was the only exhibitor of S. C. W. Leghorns that won in every class in which he entered. Mr. Muntz is one of Elgin's best known business men and is held in high esteem by all who known him. He is a member of N. S. C. White Leghorn Club and is treasurer of the Elgin association. Messrs. Rogers & Muntz are offering a fine lot of young stock for sale and specialize on selling birds guaranteed to win. The American Poultry Journal joins with many others in wishing them unbounded success.

How to Produce Winter Eggs.

There is great danger of many fine flocks, which it has taken years to breed and perfect, being sacrificed this fall and winter because of the European war situation. This war is causing feed to advance in price, but if it continues it will also

H. A. Muntz, Elgin, Ill.

cause eggs, poultry, and practically all other food products to advance in proportion. Poultrymen will be inclined to become frightened at the high cost of grains and sell off their stock so close that their business will be crippled this winter and next season. The price of eggs is going to be high beyond a doubt. The question with you ought to be "How to get the egg." There will be a great demand next season for eggs and stock for breeding purposes. Then, don't decrease your flock in size so that your business will be crippled.

One winter egg is worth at least three summer eggs. It is up to you to learn the secret of producing winter eggs. One of the lessons issued by the American School of Poultry Husbandry of Mountain Grove, Mo., prepared by T. E. Quisenberry, Director of the Missouri State Poultry Experiment Station, and president of this school, treats this subject in an intensely practical manner. It is only one of the twenty-four lessons which comprise the correspondence course offered by them, and which are helping the poultrymen in forty-three states and several foreign countries to turn failure into success. It is a most complete course in poultry husbandry. This lesson on "Feeding for Winter Eggs" is worth the price of the entire course. One dollar starts you. Read the advertisement in another part of this paper. Satisfaction is grananteed or your money back. Mention this paper and write today for the free booklet, which tells the whole story.

Owen Farms' Latest Victory.

At the recent New York State Fair held at Syracuse, N. Y., Owen Farms birds won 10 out of a possible 24 firsts and 9 seconds. These were placed on their White Plymouth Rocks, White Orpingtons, White Wyandottes and S. C. Rhode Island Reds. They also won $100 Manning cup for 10 best and most typical birds of one variety; $100 Park & Pollard cup for best 1914 youngster; $50 cup for best 10 birds in the American class; Club cup for best collection of White Plymouth Rocks. Numerous shape and color specials went on Owen Farms birds. The above is a grand record considering the fact that these birds won in the hottest classes ever brought together at a state fair. They won 1st, 2nd and 5th cockerel in a class of 342 S. C. R. I. Reds. No Buff Orpingtons were shown by Owen Farms at this fair, as they had sold birds in this variety. If in need of some excellent show birds ready to win in any show, write Maurice F. Delano, proprietor, Owen Farms, 107 William street, Vineyard Haven, Mass.

W. R. Curtiss & Co.

Hardly a day passes but we have occasion to think of, and to remember our trip to the Niagara Farm, Ransomville, N. Y., last Spring, for we believe it to be the most successful poultry plant we know of. There can be no question of their success, and with this in view we have often to refer to it.

Their progress dates from the beginning of their business over 30 years ago, and the great results we see today of a 100,000 or over chickens and ducks raised to market age and as many more sold as baby chicks, with other thousands sold for breeding and exhibition purposes is all the result of a modest and small beginning with one pen of birds.

It is a practical farm, a place where results in every department are demanded and one that assures to their customers the same high-grade quality bred for results that their experience and breeding for all these years has produced for them. The great laying hens and the fast-growing and maturing ducks are the results of their own selecting, so when we consider practical qualities we will admit that their years of breeding should have special values along these lines.

Mammoth Pekin Ducks have long been a leading feature here and again we are perfectly free to say that we never have seen ducks of such wonderful size and quality as here, their entire line of breeders and young show the grandest quality and the best of size and they have won for them and their customers the country over. They are mammoth in name and in fact.

White Runners are becoming very popular and the Niagara line is particularly fine, full of vigor and all desired quality. Their this year's breeders, numbering over 400, were a revelation to me and were fully written of at the time. They also breed the American Fawn and Penciled English Runners.

In Poultry they breed White Rocks, White Wyandottes, White Leghorns and R. I. Reds. Just at this time they have an exceptional lot of yearlings to offer the trade and those interested will do well to correspond with them. It is an old and reliable line they offer and this is the time to buy and save money.

Mr. Curtiss informs me that this is the proper and best time to purchase breeding ducks and be assured of getting the best breeders, also that they have hundreds of choice birds for sale at most reasonable prices. We feel as poultrymen that we owe much to this firm, for they have led the way and have surely shown what can be accomplished. We like to recommend them, for we are always sure of the results; they have the quality desired and are bound to please their patrons.

NIAGARA BRAND GREEN CUT CLOVER.

For upwards of 20 years Green Cut Clover has been their staple. It is the best green food for ducks or poultry that can be bought. The birds like it and will eat much more of it than of alfalfa and give better results. We have used this for years and have always gladly recommended it, for it is clean, pure and wholesome.

Their catalogue we consider to be the best feed book we know of. The formulas are original and their own, tested and made to give results. Write them for this and for your wants, and mention A. P. J.

H. P. SCHWAB.

S. C. Buff Leghorns.

On a recent visit to the home of F. S. Smith, Hamilton, Ohio, we visited the various farms where his famous S. C. Buff Leghorns are raised. He has in the neighborhood of five thousand of the best young stock he has ever produced, which is proof positive of what select breeding will do. It is Mr. Smith's custom to let farmers raise his Buffs on shares, he taking half the pullets and cockerels and selecting the birds of fine type and grand color, and the results each year mean a decided increase in the number of excellent birds. This system is certainly a winner.

Mr. Smith begins hatching in December and has matured birds very early, with months of fine weather and range to make them healthy and with great vigar to face the winter and keep up a great laying record. In the past years he has bred other varieties, but for the past 14 years he has specialized in Buff Leghorns. He is one of the largest specialty breeders of Buff Leghorns in the world and his Leghorns win anywhere and everywhere. He can at all times furnish them in large numbers and has shipped as many as one thousand in a day. Before the flood of two years ago gave him the worst of it he raised them in large numbers, but the five thousand he has this year will more than make up in quality and place him on easy street again.

Mr. Smith operates twenty 250-egg incubators and fourteen 400-egg machines and keeps them filled all the time until May. He furnished baby chicks by the thousands.

Again referring to the quality of his stock, I can truthfully say that I never saw so many good ones together before, the color golden buff and the type ideal. Buff is one of the colors that will always be popular and is now extremely so. That Smith's Buffs stay buff is shown by males three and four years old that are finer than many breeders' cockerels. The head points are excellent—five-point combs on a large majority of them and lobes are very white.

During the past few years he has shown at 13 of the largest shows and has over 40 fine silver cups ranging in value from $10.00 to $200.00. He is a man that always satisfies his customers, and his catalogue contains many fine letters from satisfied buyers. Write for a copy.—H. H. Coburn.

Sheffield Farm's Birds Win at Leading Fairs.

"Premier" Partridge Wyandottes, in strong competition, won every first prize at the New York State Fair, Syracuse, N. Y., and every first at the Forest City Fair, Cleveland, Ohio, as well as specials in cash and cups. These two fairs are the first that Sheffield Farm, Glendale, Ohio, have shown at this fall. They further advise that business is booming and that a very prosperous season is in sight for the breeders. Write them your wants in show birds or utility stock. They can supply you anything you desire in Partridge Wyandottes at reasonable prices and guarantee to please. Mention American Poultry Journal when writing.

A Big Leghorn Farm in Missouri.

Twenty-five miles from St. Louis, on the Frisco R. R., Memphis branch, there is one of the best Single Comb White Leghorn farms in the country. All buildings modern, up-to-date, with every labor saving device, representing an investment of $10,000 in buildings alone.

This is Bella Vista Farm—capacity 3,000 birds, all Young-Wyckoff strain. They now have somewhat over 4,000 birds, and before putting them in winter quarters they will sell 1,000 hens, pullets and cockerels at reasonable prices. If interested write for prices and mention number wanted. A neat catalog will be mailed free. We can recommend Bella Vista Farm as responsible company. Correspondence should be addressed to Bella Vista Farm Co., Kimmswick, Mo.

First Big Win.

A. A. Carver, of Seville, Ohio, breeder of Red Sussex, Rhode Island Reds and Golden Campines, makes his first big win of the season, at the great Forest City Exposition, Cleveland, the Hagerstown of the middle west, 3,500 birds. They won ten firsts, seven seconds, and every bird but one placed. Their record is over 100 prizes the past twelve months in such shows as Chicago Coliseum, Madison Square Garden, Buffalo, Cleveland, Ohio; American Poultry Association show. They also report winnings of their customers in over twenty-five states. See their ad elsewhere in this issue offering stock at rock bottom prices.

Fashion Plate Buffs at Forest City Fair.

A. E. Martz & Son, breeders of Fashion Plate strain S. C. Buff Orpingtons, located at Arcadia, Ind., have just advised us that they won at Forest City Fair, Cleveland, Ohio, as follows: First pen, first and second cockerel, first and second pullet, third and fourth cock. This firm has some fine show birds for sale ready to win for you at leading shows. Also some excellent utility stock for sale. Look up their announcement in this issue and write for full particulars.

There has long been a demand for a safe and sure poultry drinking fountain that absolutely would not freeze in extremely cold weather. Realizing this, the Otis & Moe Manufacturing Co. of Chicago have just put on the market an artificial heater that can be adjusted to any size of their top-fill square pan poultry drinking fountain. These heaters are substantially made, of heavy galvanized iron, and constructed so that the lamp cannot be blown out in the stormiest weather. They make the Moe's Top-Fill Fountain absolutely non-freezing in the coldest climates. They are simple and safe to operate, with every precaution taken in their construction to do away with all danger of ignition. They are fully as meritorious as the many other useful articles in Moe's line, and herewith an unsolicited comment regarding the same:

Parsonage of M. E. Church,
Mt. Hermon, N. J.
Rev. E. F. Fowler, D. D., Pastor.
Delaware, N. J., Aug. 31, 1914.

Otis & Moe Manufacturing Co.,

Gentlemen: I wish to say that I have found your poultry appliances the best I have used in an experience of 26 years, and I take great pleasure in recommending them to my friends in the poultry business.

Enclosed find check for three Sanitary Feeding Troughs No. 21, which kindly ship immediately by parcel post.

Signed. Dr. E. F. Fowler.

Marshall's Evergold Buff Wyandottes made a fine winning at the great North Randall Fair, Ohio, August 20-27, winning 1-2-3-5 cock, 1-2-3-5 hen, 2-3-5 cockerel, 2-5 pullet and 1-2-3 pen. The quality was even better than last year. Buff is one of the staying colors in popularity and the Rocky Run Buff Wyandottes have given Buffs another boost. Under the skillful management of Gerald Williams, the Evergolds are easy winners anywhere. There are 1,000 at Rocky Run and they are the finest flock in the country, showing quality all along from chicks to old birds. Write for prices and get one of the Evergold Buff cockerels to help out your young stock next season.—H. H. Coburn.

Editor American Poultry Journal.

Dear Sir: Last fall I purchased a copy of Dr. Woods' book, "Open Air Poultry Houses for All Climes," and built a house 20x48 feet set on cement foundation with ⅞-inch floor; rear and two ends and back boarded on inside with ⅞-inch flooring, roof and all sides covered with 3½-ply roofing. House divided in three 9-foot pens and four 5-foot pens, solid partitions between. I am breeding S. C. Anconas and Silver Campines. I put the birds in this house last November and never had a frosted comb or sickness of any kind, birds singing and shelling out 60c eggs. House and litter always dry. This is the only house for me.

William Crede,
Elgin, Ill.

Charles G. Pape, of Fort Wayne, Ind., the well-known breeder of S. C. Black Minorcas, informs us that he has some exceptionally early hatched cockerels and pullets and that he is in a position to furnish some very choice birds for all the early fairs and winter shows. Pullets were laying September 1st. He has cockerels that are exceptionally large and long; in fact, more fully developed and of better style and quality than during any previous season. Mr. Pape's reputation for square and honest dealing is so well known to our readers, it is not necessary for us to make any comment on it. Anyone desiring high-class S. C. Black Minorcas would do well to write Mr. Pape for prices and particulars.

Kingsland, N. J., Sept. 8, 1914.
H. I. Co., Salem, Va.

I have formerly used "Oculum" and have found it very satisfactory in every way. All my birds grew as rapidly as weeds, and people were surprised. But I have not had chickens in over two years, so I am going to try again, only along the "right way," and that is the "Oculum Way" for me and mine.

Enclosed find money order for a bottle of "Oculum."

I believe in the old saying, "An ounce of prevention is worth a pound of cure."

Respectfully,
Peter F. Ewerts, 260 Ridge Road, Kingsland, N. J.

W. F. Zimmerman, Willoughby, Ohio, showed a few of his famous Reds at the Randall Fair August 20-27 and won 1st cock, 1-2-4 hen, which shows that his Reds moult red and can hold their own with the best of them. Write him for prices on cockerels for choice breeders and show birds.—H. H. Coburn.

Layers of over 24 Eggs per month all through the Winter

Nixon's White Wyandottes

Naturally, in all serious trouble you call a SPECIALIST. Why not do the same when you need a good foundation or a few birds to improve your flock. I have been a White Wyandotte specialist for 21 years, and a leading winner in the big shows. Naturally I can fit you to perfection in anything you may need from a bang up layer to a Madison Square winner. Write me today; you need my strain to to be successful. Cockerels matured; pullets laying. Literature free.

CHAS. NIXON, Judge and Breeder - - - Box 202, WASHINGTON, N. J.

E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks

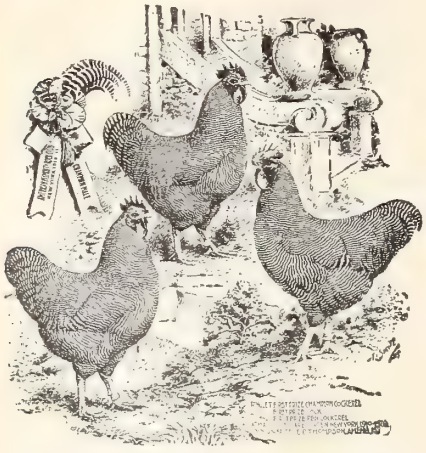
Eclipse all former achievements and win the most brilliant record of their time at Madison Square Garden, New York, this Winter of 1914, winning as follows:

ALL RIBBONS ON COCKERELS, namely, first, second, third, fourth and fifth prizes.

First and fourth on Cocks.

First, second and fourth on Exhibition Pens.

The Imperial prize of the show, Sweepstakes Special for Champion Male.



Medallion for Champion Cockerel.

Diploma presented by the American Poultry Association for Best Cockerel.

Spec'l for Best Shaped Male.

Spec'l for Best Colored Male.

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York.

Silver Cup for Best Plymouth Rock hatched in 1913, male or female, any variety.

Specials presented by the President of the American Barred Rock Club for Best Cockerel and Best Pullet.

Three Best Cockerels; Best Display; Best Collection.

Silver Cup presented by the New York Sun for best Cock, Hen, Cockerel, Pullet and Pen.

Sweepstakes Silver Cup for Best Exhibition Pen.

The Association $25 in Gold for Best Display.

All Silver Cups and Cash Specials.

Three times as many first Prizes as any Barred Rock Exhibitor.

More First, Regular and Special Prizes than any Exhibitor of any breed.

My exhibit was the most illustrious ever presented to the world —every winning feather was bred on my farm.

The amazing record of **1st, 2nd, 3rd, 4th and 5th prizes** on Cockerels—every Regular and Special Prize offered—stands unmatched in the history of Madison Square Garden. It is unequalled. These cockerels and hundreds of their brothers on my farm are beyond comparison—they are the Finest in the World.

If you want to win and breed winners you must have my Imperial "Ringlets."

They are the standard by which all other Barred Rocks are judged. The great twin records at Madison Sq. Garden, N. Y., 1913 and 1914—two years in succession—spell **Imperial "Ringlet" Supremacy.**

AUG. D. ARNOLD BOX 777 DILLSBURG, PENNSYLVANIA

F. E. Harrison's ROYAL RED S. C. R. I. Reds

Are the True ARISTOCRATS of the Rhode Island Red World

1st Old Chicago Pen 1913-14, Bred and Owned by F. E. Harrison, Menominee, Mich.

The sun has never shone on three thousand Single Comb Rhode Island Reds that are of the same high class quality as my flock of this 1914 season.

The old adage, "Blood Will Tell," is demonstrated most decisively in the magnificent production of my this year's matings, and these specimens stand out with a pre-eminence that is clearly defined; in fact, the entire farm is alive with **living standard models.**

Editor Theo. Hewes, on a visit of inspection to my farm August 31st, stated that never before had he seen any flock that contained so many magnificent show specimens. (Read his report of this visit in the October Inland Poultry Journal.)

In the past two Chicago Coliseum Shows, **Royal Reds** have won nine out of a possible 12 firsts. No other competitor winning more than one.

My show record in national shows is positively the best ever recorded, and **Royal Reds** in the hands of customers are winning the world over.

Remember Royal Reds are the proud product of years and years of careful, conscientious, systematic and scientific breeding, and are the classic strain of either hemisphere.

In four national battles of supremacy, under four different judges and in four different states in the season of 1913, **Royal Reds** won twenty-two out of a possible twenty-three first prizes; besides, winning every color special, every shape special, every championship and the Rhode Island cup emblematic of the Western championship, given by the Rhode Island Red Club of America.

Note This: There were just one hundred and thirty-six exhibitors competing for these twenty-three first prizes, and when you stop to consider that **Royal Reds** won all firsts but one, you can then imagine the strength of this world's champion strain.

Cocks, hens, cockerels, pullets, trios and pens that have quality to go into any show in the world, for sale. There is no breeder in America that is in better position to furnish you with exhibition birds.

Circular free, and full details for the asking.

F. E. Harrison

Box 30 Menominee, Mich.

THE WONDER OF THE WORLD

OF POULTRY

These are the words of a prominent judge and writer in speaking of the phenomenal rise of the

ARISTOCRAT

STRAIN OF BARRED ROCKS

Entirely unknown several years ago they have grown and grown and grown in popularity against heavy odds and almost insurmountable obstacles until now they have practically cut out a class for themselves; won a place for themselves at the very front. Orignally they were bred, year in and year out, season after season, with only one object in view—narrow barring down to the skin. In this they have succeeded so well that now their very narrow barring is famous all over the continent. They are actually **the most narrow barred birds in existence.** With this dazzling wealth of exquisitely narrow, straight, even barring in every section they carry a strength of rich, beautiful color which is nothing short of marvelous. **The color** is so strikingly clean, sharp, lustrous in beauty that it **fairly scintillates and sparkles.** Holding this truly beautiful color, holding the marvelous regularity of the narrow barring with undimished strength I have been able to build up their shape, their size, their style and their head points year after year, until now they are, above all, simply.

IDEAL SHOW BIRDS They have **every thing** that is needed for the show room. **They fit right in with the standard.** This is the reason why they won out in 144 representative shows the past season in all sections of the U. S., Canada and Europe. This is the reason why they are so immensely popular. This is the reason why my business is this year **ten** times as great as only a few years ago. This is the reason why the Aristocrats are giving such universal, absolute satisfaction everywhere. This is why they have acquired **world's fame.**

THEY WIN This is the sum and substance of the whole story. **They win** –yes, **they win. Do you want to win?** This year my show birds are greater than ever. They **will** win. I can furnish **winners** for **any** show. The greatest lot of show birds in the world —I say it advisedly – is right now in my yard. "Every show bird guaranteed."

They won four of the five blue ribbons at Little Rock, Ark., including Champion Cock and Hen and the same record at Jackson, Miss., including Champion Cockerel and Pullet. The $100 Sweepstakes, the Best Hen and the wonderful record of 29 of the 30 prizes, was their record at Memphis, Tenn., 1913. This season my birds have won as follows: Nashville, Pen 1st; Cock 1st, 2d; Hens 1st, 2d; Cockerel 1st; Pullet 1st, 2d. At Memphis, Pen 1st, 3d; Cock 1st, 2d, 4th; Hen 1st, 2d, 3d, 4th; Cockerel 1st, 2d, 4th and Pullet 3d, 4th, 5th. **When better birds are bred Brinkley will breed them.** Show birds and breeders for sale. Can furnish winners now at reasonable prices. Write for a catalogue. It is free.

W. J. BRINKLEY, Prop., D. R. Jolly, Supt., Box 10, IUKA, MISS.

Get Your Grain Sprouter

From the Man Who Knows How to Build

Profit-Making Poultry Outfits

The demand for Grain Sprouters has brought many on the market built by men who know nothing about the poultry business and who lack experience in manufacturing articles to meet the demand of poultry raisers.

It takes months of experimental work and weeks of tests under all conditions to be able to know how to turn out a good sprouter. Our machine is built along these lines. We spent thousands of dollars perfecting the IDEAL. Now, the IDEAL has reached the highest point in efficiency tests. Over 20 are in use in my Millhook Poultry Farm, hundreds on other large chicken farms, thousands scattered throughout the country—all turning out the juiciest, tender greens ever sprouted.

J. W. MILLER
Inventor and Manufacturer of Advanced Types of Incubators, Brooders, Grain Sprouters

If you want feed like that—feed that will **increase egg yield 50%, make chicks mature earlier, bring more fertile eggs,** and **keep fowl in condition**—get the

IDEAL Grain Sprouter

It is made of the best lumber outside and finished like a piece of furniture. All metal inside, rustless and durable. Constructed on scientific principles—like our incubators—with efficient heating and ventilating systems. Equipped with famous **Ideal Safety Lamp.** Uses less oil. Easy to operate and take care of. Produces an **average** of 3 bu. of sprouts from 1 bu. of grain. No waste, no bad lots, with the IDEAL. Guaranteed in every way.

Get Special Low Price Offer Today

—also full particulars and description of this **guaranteed** Grain Sprouter. **It is the Biggest Money Maker for the Poultryman Since the Incubator Was Invented.** Address

BEST by CONTINUOUS TEST

Is The Unbeatable Record of

Tecktonius-Reed Strains

R. C. S. C. **Buff Leghorns** S. C. **Rhode Island Reds**

An occasional winning fowl, or pen, is not unusual; many breeders produce them, but that don't make a WINNING STRAIN, any more than a "swallow makes a summer". Producing a strain of birds that **sweep the boards** in the big Nat'l Laying Contests and Exhibition Arenas—not ONCE, but YEAR AFTER YEAR—is the unbeatable achievement of **Tecktonius-Reed** "Buffs" and "Reds", in competition with all popular breeds—against America's foremost breeders. This unequalled breeding and exhibition record proves "Tecktonius-Reed's" **breeding methods** to be scientific, and and their strains of "Buffs" and "Reds" to be a dependable foundation upon which poultrymen can rear a brilliant poultry success. Hundreds are doing it today; why not you?

Note Our Attractive 1914 Offerings

Choice of three Varieties (R. C. and S. C. Buffs—S. C. Reds) with Each

Utility Stock	Exhibition Breeding Stock	Exhibition Show Stock	Special Pullet Offer
Good breeding Cockerels $3 and $5 per head. Good breeding Trios, or Pens, $10 and $15.	Hens or Pullets—$5, $8, $10, $15, $25 per head. Cockerels—$10, $15, $25, $50 per head.	Pens—high quality—$50, $75, $100.	Eleven **April Hatch** Pullets—excellent value—mated to a good, vigorous Cockerel $25.00

NEVER BEFORE HAS OUR OFFERING been of such high quality—never before was your chance for making a "a ten strike" in poultry raising as good as now. In National Laying Contests—1912—our Buff Leghorns led with high average of 249½ per pen—201 for individual hen.

"Tecktonius" Strain of "Buffs" carried of first exhibition honors for 8 years at Chicago, New York, Boston, Philadelphia, Baltimore, St. Louis, San Francisco, Kansas City, Indianapolis, Cincinnati, New Orleans, Memphis, Des Moines, and scores of lesser shows. Your success as a breeder—as an exhibitor—will be assured with a **Strain** backed by such an array of continuous triumphs. Send us your order today.

Tecktonius & Reed Buff and Red Farm
ROUTE 7 **RACINE, WISCONSIN**

"A fine flock"—

Rudy's Perfection Strain
White Wyandottes

will delight the most fastidious lover of fine poultry. "A fine flock" is the involuntary comment. They have that pure white color, broad back, perfect head points and well spread tail so much desired in the beautiful White Wyandotte.

I will supply you with birds that cannot fail to please—the kind that will not be overlooked by any judge—birds that you will be proud to possess and that will win the ribbons for you if entered in competition.

Remember, my birds have the reputation of winning the most coveted prizes at the larger fairs and poultry shows.

Send for illustrated catalog and moderate prices.
Satisfaction guaranteed or money refunded.

$1,335.00

In Valuable Prizes and Cash

GIVEN AWAY

BY

American Poultry Journal Publishing Company

This is without doubt the most liberal offer ever made by any publication, and includes

26 GRAND PRIZES

all of exceptional value, and especially the FIRST, SECOND and THIRD PRIZES. We know you have never had such an opportunity to get so much for so little effort.

The following grand prizes will be given to agents sending in the most subscriptions before midnight, January 15, 1915.

(Note—These prizes are given in addition to the cash commission and special prize for the first five subscriptions.)

1st—$500.00 Wing Piano
2d—$252.00 Candee Incubator
3d—$100.00 Cash
4th—Simplex Brooder Stove
5th—Brookfield Sectional Poultry House
6th—Keystone 100-Egg Incubator
7th-10th—150-Ck. Simplex Feather Brooder
11th-15th—100-Chick " " "
16th-20th—50-Chick " " "
21st-25th—Full Bushel Faultless Feeder
26th—$10.00 Cash

This is just to make the end man or woman feel good. It may be won, perhaps, by sending in only ten subscriptions, but $10.00 goes to the 26th winner.

In case of a tie the value of the prize will be divided. All subscriptions mailed before midnight, January 15, 1915, and bearing postmark of that date will be counted in the contest. In this manner those living at a distance have an equal chance with those residing nearby. Prizes will be awarded January 20th and list of winners given in the February issue of American Poultry Journal.

Cash Commission allowed on every subscription sent in, and a SPECIAL PRIZE is given to all who send in five or more subscriptions. This special prize consisting of a half-bushel size "Faultless" Automatic Feeder.

Immediately upon receipt of your first FIVE subscriptions to apply on the contest, we will ship you a half-bushel-size **FAULTLESS Poultry Feeder.** Remember, this is a special premium just to get you started on the way toward the larger Grand Prizes offered in the contest. Only one feeder will be given to any one agent.

Cash Commissions

In addition to this feeder the agent receives 25 cents cash commission on every one-year subscription and a cash commission of 50 cents on every three-year subscription taken at the special prices mentioned below. Show this to your friends. You save them money and are royally paid for your trouble.

The regular subscription price of American Poultry Journal is $1.00 per year, but during this contest we will allow agents to take subscriptions at a cut rate price of 75 cents per year, or THREE YEARS for $1.50, according to the following table:

AMERICAN POULTRY JOURNAL

Term of Subscription	Cut Rate	Send Us	You Keep	Counts in Contest
1 year	$0.75	$0.50	$0.25	ONE
3 years	1.50	1.00	.50	THREE

BIG THREE OFFER

American Poultry Journal, Western Poultry Journal and American Poultry Advocate

Term of Subscription	Cut Rate	Send Us	You Keep	Counts in Contest
1 year	$1.00	$0.75	$0.25	ONE

American Poultry Journal with Year Book

Term of Subscription	Cut Rate	Send Us	You Keep	Counts in Contest
1 year with paper bound Year Book	$1.00	$0.75	$0.25	ONE
3 years with cloth bound Year Book	$2.00	$1.50	$0.50	THREE

In order to secure agents' prices at least two subscriptions must be sent in. Address

American Poultry Journal Pub. Co. 542 So. Dearborn St. Chicago, Ill.

FREE $500.00 Wing & Son Concert Grand Piano

FIRST PRIZE **This grand $500.00 Wing & Son Piano will be given as First Prize to the person sending us the largest number of subscriptions to American Poultry Journal before January 15, 1915. It is a Concert Grand, Style 29, with French Walnut case, and certainly is a beauty. Don't let some else beat you to win this elegant prize. The winner will be especially fortunate, as this piano is one of the best made anywhere in the country. We will order it sent direct from the factory to the winner. For full description of this handsome instrument, write Wing & Son, 9th Street and Hudson Avenue, New York City, N. Y., for one of their catalogues. Read letter below from winner of piano in one of our former contests.**

FROM WINNER OF OUR LAST PIANO

I, being a raiser of fine bred poultry and an Agent of Poultry Supplies, one day while reading the "American Poultry Journal," the thought came in my mind that I could get a good many subscriptions for the "Journal" among my customers.

So I entered the Contest in January, 1909, and started in to win the Pony Rig, which was the First Prize. I kept the lead for January, February and March, then I was taken sick with Grippe and was laid up for two weeks. During this time Mr. Hartman of Pennsylvania got in ahead of me, and when I got on my feet again it was "nip and tuck" between us until the Contest closed, on the 15th of June, he winning the First Prize and I the second, ONE HUNDRED DOLLARS ($100.00) CASH, Mr. Hartman winning by about forty counts.

I felt a little discouraged in not winning First, as I am sure that I would have done if I had not gotten sick and lost the two weeks' time. However, I worked for the Company all through the summer months, selling the "Journal" on commission, and when the Fall Contest started September 10th I started in again, keeping the lead for September, October and November, when Mr. Jackson of Massachusetts ran in ahead of me, keeping the lead through the balance of the Contest, he winning First Prize, Two Hundred Dollars ($200.00), and I winning Third Prize, Fifty Dollars ($50.00). But Mr. Jackson worked in quite a different way from me, having other agents under him, and most of his subscriptions were for three years, which gave him four counts on each subscription. Mine were all one year subscriptions and I got only one count on each of them.

The next Contest opened on January 1st, 1910, but I did not enter it until the 10th of the month, as I was undecided as to whether to enter or not; but after thinking the matter over I decided to make another break, so started in. The Company put up fine Specials for January, February, March and April—a $20.00 Brooder Incubator, or a Pen of Fowls for First Prize, $15.00; Brooder, Incubator, Pen of Fowls for Second Prize, $10.00; Incubator, Brooder or Pen of Fowls, Third Prize.

I winning First for each month, and a Watch for May. This being the Second watch I won. When the Contest closed I became possessor of the First Prize, which was one of Wing & Son's Circassian Walnut Pianos.

All the prizes that I won were well worth working for, especially the Piano. It is Wing & Son's Concert Grand, which is certainly a very fine piano, and my wife being a pianist and organist, has given it a good trial, as I made the Piano a present to her for Christmas, and she is more than pleased with it.

The Piano case is very handsome, being Circassian Walnut with a beautiful grain, and it is an ornament for anybody's parlor.

I can say that any agent that works for the "American Poultry Journal" Publishing Company will be well paid, as they certainly keep up to what they agree to do.

Yours very truly,
Arthur S. Johnson.
51 High St., Mt. Clair, N. J.

American Poultry Journal Pub. Co. 542 So. Dearborn St. Chicago, Ill.

FREE $252.00 Candee Incubator, $100.00 Cash, etc.

Second Prize—1,800 Egg Candee Incubator Equipped with Nursery Brooder

The above 1,800 egg Candee Incubator will be given to the person sending us the second largest number of subscriptions to American Poultry Journal before January 15, 1915. This incubator is made by the Candee Incubator and Brooder Co., Eastwood, N. Y., and sells for $252.00 complete with Nursery Brooder. Here is an opportunity to go into the poultry business on a large scale and make a fortune next season raising poultry. You can hatch the eggs for all your neighbors and do it in a profitable and most satisfactory way with this grand machine. A little effort on your behalf is all that is necessary to win this elaborate prize. Start today.

GENERAL INSTRUCTIONS

All subscriptions taken to AMERICAN POULTRY JOURNAL must be taken on the merits of the paper. The agent must remit to the publishers of American Poultry Journal 50 cents for every one-year's subscription without any premium book, and for such a subscription he will be credited with ONE COUNT in the Grand Prize Contest. He must remit 75c for a one-year subscription and a copy of the YEAR BOOK, paper bound, and for such a subscription he will be credited ONE COUNT in the contest. For every THREE YEAR subscription without any book the agent must remit $1.00, and for such a subscription he will be credited THREE COUNTS in the contest. If a cloth bound Year Book is to be sent to the subscriber with the subscription, then the agent must remit $1.50 and he will be credited with THREE COUNTS in the contest.

Every agent will be furnished with the necessary coupons and sample copies upon request. If coupons run out send for more; if they don't reach you shortly, send in the names on a list, but be sure to put your name and address on this list so that we know who sent it in.

All subscriptions which are mailed before midnight of January 15, 1915, will be counted in the contest, thus giving those at a distance an equal chance with those residing nearby. All contestants will be informed from time to time just how the contest is progressing, where they stand, etc. This information will be given to all who state their desire to enter this great subscription contest. Remember, EVERYONE GETS A PRIZE who enters and sends at least five subscriptions.

CANADIAN SUBSCRIPTIONS require 25 cents per year extra for postage. FOREIGN SUBSCRIPTIONS require 50 cents per year extra for postage. *Renewal Subscriptions Count the Same as New Subscriptions. Your Own Subscription Counts the Same as Any Other.* For every subscription to the Big Three Offer, agent must remit 75 cents and receive ONE COUNT in the contest.

How to Become an Agent

Every one sending us two or more subscriptions will be considered an agent and eligible to secure one of the GRAND PRIZES. Simply send in your subscription (new or renewal) together with one more and you have qualified as agent and are entitled to agent's prices on books and subscriptions until January 15, 1915. TAKE ADVANTAGE OF THIS FACT; you may never have another opportunity like this to get agent's prices and a chance to secure one of the grand prizes.

(Agents must send in their subscriptions at least once every week; we would appreciate it if agents would send in on Saturday and Tuesday of each week, regardless of how few subscriptions you have to send in. Make all remittances by Postal or Express money order and keep your receipt, in case of complaint.)

Coupons may be Distributed by Mail

If you have friends living in other cities who are interested in poultry or who have other acquaintances who are interested in poultry, sign your name as agent to a supply of CONTEST COUPONS and mail them to these friends, telling them how they can assist you to win one of the grand prizes by filling in one coupon themselves—getting a few of their friends to subscribe and sending the coupons together with remittances either back to you, so that you can send them to us, or they can be sent direct to us and we will credit you with the subscriptions just the same as if you sent them in yourself. When calling on your friends in this manner BE SURE THAT YOU WRITE YOUR NAME AND ADDRESS ON THE COUPONS AS AGENT.

Allentown—None shown.

S. C. Rhode Island Reds

Syracuse—1st, 2d and 5th cockerel in a class of 32 cockerels.

Allentown—1st hen, 1st, 2d and 4th cockerel, 1st and 2d pen, cup for BEST RED in show won by 1st cockerel. Champion male and champion female.

26 out of a possible 44 firsts with two different strings of birds at the two highest quality fairs in all America.

Winter Shows

You now know very closely how your old birds will moult and how your young birds will develop. You will need to strengthen your string by buying a cock, hen, cockerel, pullet or pen. Why not make your winning certain by calling on my vast resources to help you out? Among my 6,000 carefully selected old and young birds are the **exact birds you need** to help you make a **sweeping victory.**

Utility Qualities

262 eggs in 290 consecutive days and 236 eggs in less than 300 consecutive days are two trapnest records reported by customers made by pullets grown here and sold by me. These unsolicited statements from my customers emphasize the utility qualities of my birds.

Breeding Stock

Carefully mated pens for breeding utility or show birds are now offered in all my varieties. Pens will be carefully selected by Mr. Davey or the writer, whose experience mating thoroughbred poultry covers 35 and 25 years respectively. If you want line-bred birds that lay, pay and produce quality; strong husky birds that have never known a sick minute and that have been grown on free range under natural conditions, **send your order to OWEN FARMS and receive better value than you can obtain anywhere else for your investment.**

Satisfaction Guaranteed

Every customer or I will pay return charges and refund full purchase price. Write me exactly what you need and receive my catalogue.

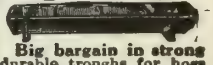
Building Material Prices S-M-A-S-H-E-D

NOW IS THE TIME TO BUILD OR IMPROVE

The Chicago House Wrecking Company now owned by the Harris Brothers Company decided that their best interests required more prominent use of the owners name. This Company has been favorably known to the public everywhere as "The Great Price Wreckers." The price smashing ability of this Company has earned for us an enviable reputation and justly earned title. "The world's greatest bargain center." During 22 years of successful business the four Harris Brothers have been the executive officers and owners. There is no change in our business except that the four Harris Brothers will advertise and sell their goods under our new name.

Harris Home No. 23



Never before in our entire history have we been so splendidly equipped to supply wonderful bargains. There isn't another firm on earth that occupies the unique position in the merchandise world that we do. The original methods which we pursue in securing our tremendous stocks of dependable material and merchandise and our enormous buying power represented by our $10,000,000 capital makes it possible for us to buy for spot cash entire stocks that are beyond the reach of ordinary buyers. We are determined to make the Fall of 1914 a memorable one with this Company especially in our departments of building material. These rare bargains speak for themselves.

Bathroom Supplies $13.00

White enameled cast iron one-piece roll rim bath tubs with nickel-plated trimmings and including fuller double bath cocks for hot and cold water. Connected waste and overflow nickel plated supply pipes. 5 foot long. Lot EA-61.

Hog Troughs

Big bargain in strong durable troughs for hogs and cattle. Heavy steel cross bars and legs securely riveted. Round bottoms 5 foot long. No. 16 gauge steel, each 89c. Order by lot EA-63.

$1098 BUYS MATERIAL TO BUILD THIS Model Farm Home

Without question the most convenient and practical design offered today. It represents the combined result of 22 years of expert planning, designing and close study of economy in material and construction. For years we have solicited suggestions from hundreds of our customers and country people everywhere. The best we have received is embodied in this design. Let us take you through it.

Basement under entire house; boiler room in rear. Boiler and coal room section and front section may be partitioned off tightly. Dust tight coal bin and root room. Outside cellar stair; large door easy to get in and out. First floor has 4 large rooms. The reception room and living rooms are separated by cased opening; giving an extra large social gathering room if desired. This also applies to the living room and dining rooms. Main stairway has a lead to kitchen permitting passage to second floor without going through living room. Kitchen is large and well arranged. Pantry will hold a wonderful lot of supplies. A large handy washroom is provided just back of kitchen. There is also a back porch between the pantry and washroom properly protected. On the second floor are 4 good-sized bedrooms each with its own closet. A linen closet is provided for and an airing porch which may be used for out-door sleeping purposes. Bathroom is conveniently located for economical plumbing.

THE MATERIAL The above price includes all first-class No. 1 dimension lumber. Clear interior trim. Beautiful glazed front door. Clear flooring. Clear Cedar shingles and siding; up-to-date hardware. Ready-cut door and window frames, inside door jambs, out door and window casings, balance in lengths to work without cutting or waste wherever possible, all glass in and back puttied.

FREE PLANS Blue print plans, specifications, material list and guaranteed delivered price to your station on receipt of the coupon below and $1.00. If the plans do not suit, return them and 50c will be refunded. The regular price without coupon is $2.00. If changes are desired, we will make plans after your own ideas.

Here's The New "Old Trusty" Book

H. H. Johnson

Write Today for a Copy
Mailed FREE

This year finds us with another big message for poultry raisers. We want you to have one of the first copies, so ask you to send in your name at once. You want to read our new book by all means if you are at all interested in poultry. In it we give you the latest and the best plans for making the coming year a good big profit making year raising chickens, ducks, geese or turkeys.

The past year was a good year for profits with Old Trusty owners. We received many thousands of calls for our book. We shipped out about 80,000 machines. And from practically every point in the country came fine reports of new big poultry incomes started, or old ones given a good fat boost with the plans we were able to suggest.

This year we have our prices fixed and factory ready to send out 100,000 Old Trustys. If need be, we could make 750 machines a day in our big factory, or 254,000 in a year not counting Sundays. But, whether or not you intend to get an Old Trusty yourself right now we want you to see the new Old Trusty Book.

Write Your Name in the Coupon or on a Postal and Mail It Today Sure for This Big Volume of Poultry Helps—The A B C of Chicken Raising

You need no introduction to the Johnson's. We have been here in Clay Center for some 20 years. We have started 580,000 poultry raisers. Most likely you have met some one or more of them and have had it in mind to get in touch with us. Do it now by sending for our new Old Trusty Book. See what we have done for profit making poultry raisers. See what we can do for you, too.

Old Trusty Still Sells for Less than $10

Freight paid to any point east of the Rocky Mountains and a trifle more to points farther west. No other factory in the country could make and sell Old Trusty for the low price we ask. That's because of our big output and big factory which keeps the cost down. No one could build a better incubator. And no other machine has shown as good average hatches winter and summer alike. It asks no favors of even the coldest weather. 150 chicks hatched Feb. 14th, 1914 while the temperature was 42 below, was the record of Mr. and Mrs. W. O. Taylorville of Alberta, Canada.

Now is the time to get started for big poultry profits next year. Make big hatches this winter with Old Trusty. Send for this new book and read how you can do it. The book is free. You assume no obligations in writing. We will not be asking you to order a machine. You are welcome to the book whether you buy an incubator or not. So send in your name now and get one of the first copies, fresh from the press.

BUYS A QUARTER BUSHEL SIMPLEX FAULTLESS AUTOMATIC FEEDER

Sold with the Absolute Guarantee of Satisfaction—Money Refunded Promptly If Feeders Do Not Come up to Your Expectations

Why continue to feed grain by hand—every few hours? Why be obliged to stay at home Sundays—burden your wife with the job of feeding the chickens—make extra work for the hired man—taking time which could be more profitably devoted to other work—and in the end **you cannot feed them as good as when they feed themselves with one of our Faultless Feeders.**

We know that this is a strong statement—that you are apt to discredit it unless you have been using our feeders—or seen them in use elsewhere—however—our customers will tell you that this is a fact—that the feeders pay for themselves in a few weeks by saving feed—you don't feed the rats—nor the sparrows—neither does feed lay on the ground and spoil. Your chickens get just as much grain as they require—never too little—never too much.

Fill the hopper of the **Simplex Faultless Feeder** once a week for the ordinary flock—the feed will keep dry and clean—the birds get it when they require it—you can go along with your other duties and rest assured that the chickens are being properly fed.

Regarding Construction

The **Simplex Faultless Feeders** are constructed of heavy galvanized iron—every part is seamed together by machinery or bolted into place—no particle of solder is used in the entire construction and yet it is water-tight—no expense has been spared to make this the most satisfactory—indestructible feeder on the market—at the same time selling it at a price fully 50 per cent lower than any similar article on the market.

Again We Say--Money Back If Not Satisfied

If you purchase your poultry supplies from a local dealer—take this advertisement to him—ask him to order a sample feeder, if he has not a "Faultless" in stock—accept no substitute—it has no equal.

If you have no local dealer in your town—or if your local dealer will not supply you with **Simplex Faultless Feeders,** send direct to us—it will be shipped promptly and the express charges will be refunded to you by a credit check.

This is only one of our many bargains—our money-saving catalog will be sent upon request or upon receipt of your order from this advertisement. Our Faultless Feeders are made in four sizes and sell at the following prices:

Greatest Subscription Offer Ever Made

All Three for $1.00

The Three Best Poultry Papers for the Price of One

American Poultry Journal, the one great poultry paper of America, is now in its 45th volume. Contains as high as 252 pages per issue. The eight-page colored supplements and colored covers each month are alone worth the subscription price.

American Poultry Advocate, published at Syracuse, New York, one of the widest quoted publications in the field, is always readable and instructive, and is conceded to be one of the best papers of its kind in the East.

Western Poultry Journal is one of the oldest poultry papers in America. Published at Cedar Rapids, Iowa, it has long been recognized as one of the most up-to-date and progressive papers, appealing alike to professional and amateur.

These three papers of the East, West and Middle-West cover the country thoroughly and no matter where you live you will find your peculiar problems treated with familiarity.

Opinions of Experts

Dear Sir: * * In my opinion the article on anatomy of the fowl will pay anybody for the purchase of the book. Yours truly, A. F. Rolf, Professor in charge of Poultry, Oklahoma Agricultural Experiment Station, Stillwater, Okla.

Gentlemen: Your 1914 Year Book has just been received. This, I find, is a valuable book, much more so, in my opinion, than the one which you issued last year. I find it crammed full of valuable information from cover to cover. Yours very truly, T. E. Quisenberry, Director Missouri State Poultry Exp. Station, Mountain Grove, Mo.

Dear Sir: Year Book for 1914 just to hand and contents carefully noted. It is filled to repletion with valuable information no owner of poultry can afford to be without. Sincerely yours, B. F. Kaupp, M. D., Spartanburg, S. C.

These are only a few of the hundreds of letters we have received.

Printing and Binding

The Year Book is printed on high grade enameled book paper and the binding is linen thread sewed to make it flat opening. There is nothing cheap or trashy about the book, as no expense was spared to make it a representative of the best present day standard of artistic printing and worthy to be handed down to posterity as example of what the best printer could produce in the year of 1914.

No book of this kind has ever been presented to the American public before. Think of it! 408 pages, 8 colored illustrations, the best articles that money can buy, on the most helpful subject, and complete show reports for 1913-14.

Prices—$1.00 for the de luxe cloth bound edition and 50 cents for the paper bound edition, carrier charges prepaid.

You can get the book FREE.

The American Poultry Year Book for 1914 is undoubtedly the greatest poultry book ever published in this country and we are giving you an opportunity to get this book ABSOLUTELY FREE of all cost.

Read this page carefully and remember the offer is a bonafide one guaranteed by a responsible publishing house that has been continuously in business for 45 years. You can't lose—so send for your book today.

How to Get the Book Free

With every subscription to American Poultry Journal received, together with the attached coupon, before Jan. 15, 1915, for one year at $1.00, we will send without cost, one copy of the American Poultry Year Book, paper bound.

For each 3-year subscription to American Poultry Journal at $2.00, sent in before January 15, 1915, we will send one copy of the cloth bound de luxe edition of the Year Book without cost. These offers are limited and will only be accepted untill date mentioned above.

Send us your order today and the book will be shipped to you at once, carrier charges prepaid. If you are not satisfied with it after examining it, return it to us and your money will be sent back to you the day we receive the book. What more can you expect?

You cannot afford to let this great opportunity pass which enables you to secure a copy of the greatest poultry book ever published ABSOLUTELY FREE by subscribing to the world's greatest poultry paper. This offer is void after January 15, 1915, Get busy today and send all orders to

American Poultry Journal Publishing Co.

Also small sizes stoves. No hovers to bother with. No gas, no fumes, no wicks, no smoke. All bother and worry gone. Losses reduced to a minimum.

At Last!

The perfect brooder stove. Based on a **new** principle. Solves all your brooding problems. Perfect ventilation. Even temperature. No chance for disease.

Brood Your Chicks 30 Days Free

Here, at last, is the perfect brooder stove! A wonderful, new invention. The Simplex Brooder Stove solves all brooding your problems. Use this wonderful new stove in your own brooder house 30 days absolutely free. Give the Simplex a thorough trial before you decide on your brooding system for next year. Try the stove under all conditions. Make any test you know of. Then at the end of 30 days, if you are not delighted send it back and we'll cheerfully refund your money. You alone are the judge. Send coupon for catalog.

Simplex Brooder Stove

Send the coupon below today for free catalog. This stove works on a new principle, costs only 1-5 as much and means 1-10 the work, 1-4 the operating expense of ordinary brooder systems. *One stove successfully broods 1,500 chicks.* Also small sizes. Self-regulating—holds an even temperature. Does away with all fuss and bother—eliminates all worry. Don't delay. Send the coupon, **today,** for free catalog and full particulars.

Turns Chick Losses To Profits

This wonderful new brooder will raise 20 to 50 per cent more of your chicks than you have been able to raise by old-fashioned methods. No more deaths from white diarrhoea and poor ventilation. It turns the losses from dead chicks into **big profits** for you. The Simplex soon pays for itself by **extra** money it makes. This wonderful new stove will double your poultry profits in a year—and it costs only one-fifth as much as other brooding systems. Send the coupon **today.**

Saves Labor and Expense

The Simplex Brooder Stove means one-tenth as much work—costs one-fourth as much to operate as any other system. Does away with all fuss and bother. Simply constructed—easily installed and cared for. It is self-regulating—needs no watching—eliminates all worry. **Try it for 30 days free.**

Free Brooder Book

Send the Coupon Today!

Send the coupon today for valuable book that tells how to "Increase Your Profits by Decreasing Mortality"—**absolutely free.** It tells how to solve all your brooding problems. How to save the chicks that you have been content to lose every year through disease and faulty brooding—how to make twice as much money from your poultry. Tells how to eliminate all the work and worry of raising large broods of chicks. Complete instructions on the scientific building of a brooder house. Reliable information about fuel. Also catalogue and complete details of the wonderful Simplex Brooder Stove and our 30-day free trial offer. This valuable book **absolutely free.** You assume no obligations whatever. Read this book before you decide on next year's brooding system. **Send the coupon today.**

MOE'S SELF LOCKING LEG BAND
MOE'S SELF LOCKING BAND READY TO BE USED
PATENTED
Patented Feb. 10, 1903
A sealed band that requires no sealer. Locks simply by pushing it together and it can only be removed by destroying the band. Manufactured out of a bright nickel colored metal that will not rust or corrode. Every band has its own raised or embossed number.
EASILY ADJUSTED WITH THE FINGERS AND IT IS THEN ON TO STAY
12 Bands 15 Cents. Postage paid. Liberal discount on quantities.

MOE'S NEVER CLOG AND WASTE PROOF HOPPER
RAISE COVER AND FILL FROM TOP
Patent Pending
Large in capacity, small in price. Does away with all trouble of feed clogging no matter how coarse. The gradual enlargement of the base will force the feed downward. Rat proof and weather proof when closed. A trial will convince you that it is a hopper of the greatest merit. Manufactured of heavy galvanized iron in three sizes:
No. 35—12 quart capacity $ .75
" 36—18 " " 1.00
" 37—36 " " 1.50
WHEN FILLED FEED CAN NOT CLOG AND ALL WASTE IS PREVENTED

MOE'S NEVER FAIL TRAP NEST
DELICATE TRIGGER HOLDING TRAP RELEASED BY HENS ENTRANCE FALLING SILENTLY
Patent Pending
A solution of all trap nest troubles, for as the name implies it never fails. These traps are lice proof. But one bird can enter at a time. Fully sealed back and sides, but when the hen is trapped she gets plenty of air from above and beneath the trap. The trap is easily removed so that the nest can be used without same and as an ordinary nest. Does away with all trouble in setting up as they are set up and ready for use when shipped. Manufactured of heavy galvanized iron in two sizes:
TRIGGER LOCKS TRAP AND HEN THEN THERE TO STAY UNTIL RELEASED
No. 33—About one foot square, complete..... .....$ .75
No. 34—12 x 12 x 14½ in. for extra large birds, complete..... 1.00

The Wing

Upright Pianos, Player-Pianos and Grands

One of Our 38 Styles

The Wing

For 46 Years a Standard Piano

Rock-Bottom!

Yes, Rock-Bottom Prices, and on a Piano of the **highest** Quality

The Wing Piano here illustrated is shown in one of our most popular cases. We offer the greatest variety of styles and (we think) the most beautiful cases in the world. We have just added a number of the finest, most beautiful, up-to-date styles and new designs, plain, colonial, mission and other designs, as well as more elaborate patterns.

The Improved new style Wing Piano in particular will prove a superb addition to any home, for it has a magnificent tone quality—well you must hear it! And we have a splendid line of newly designed, up-to-date, mahogany, French walnut, oak and other up-to-date cases. In fact, we offer the greatest variety of styles of **any manufacturer in the world.**

Thousands praise the Wing Piano to the highest degree; but there **are,** of course, dealers who make $100 to $200, **or much more,** on every sale of a piano; and music teachers (whom you would least suspect) secretly accepting commissions **from** the dealer. These people naturally "knock."

But here is our answer: The Wing is sent out on approval, returnable at our expense. When our piano must do its talking all alone while glib talking salesmen stand around "boosting" some other make—even then the Wing piano **nearly always** stays in the home while the dealer's is returned.

Remember, the Wing is the only piano sold direct FROM FACTORY which shows your friends you paid the price for QUALITY.

Don't fail to investigate our great offer.

$150 to $250 Saved

And on a piano of the highest quality. Catalog FREE. **The Wing** **The only high quality piano sold direct at wholesale price**

Never before has any piano manufacturer ever **dared** to make such an offer. The greatest piano offer ever made—rock-bottom prices—no money down—easy payments if you do not wish to pay cash—absolutely free trial—a four weeks' free trial in your own home.

Let Us Quote You the most astounding prices ever offered on pianos of unexcelled quality. The very rock-bottom prices—prices that would mean ruin to the local dealer. You will be amazed. We will positively save you from $150 to $250 on the purchase of a piano of highest quality and recognized merit. Your choice of a piano shipped on approval, **all freight prepaid,** no money down—absolutely free trial—a 4 weeks' free trial. **Remember, all freight charges are paid in advance by us, no matter whether you keep the piano or not.**

Every Discount Goes Direct To You

When you buy a Wing Piano you pay no salesmen's, dealers' or middlemen's profits. You pay no commissions to music teachers and supposedly disinterested friends. Remember, we guarantee the Wing for 40 years. If you write at once you may have the Wing equipped with our wonderful instrumental accompaniments **without extra charge,** giving the effects of the guitar, harp, zither, banjo and mandolin.

SEND COUPON (Or Postal) NOW

AMERICAN POULTRY JOURNAL
CHICAGO, ILLINOIS

Is the paper that leads—it is the one great poultry paper of America; it is the oldest, largest and best. Established in 1874. Contains as high as 252 pages per issue. It is the only journal that has a colored supplement and colored cover. Its editorial staff embraces the most noted poultry authorities in the country. It tells you how to breed and raise better birds, how to prevent disease in your flock, and how to cure the ailments of your birds. It is the first aid to all owners of poultry—tells you how to construct poultry houses, how to run your incubator and brooder so as to get the best results. In fact, each issue is an encyclopaedia of poultry.

	Special Best Display

FIRST PRIZE WHITE ORPINGTON COCKEREL
MADISON SQUARE GARDEN, N.Y. DEC. 1913
BRED and OWNED by
ALDRICH POULTRY FARM, Columbus, O.

These are the most remarkable wins ever made at America's greatest shows, and our records of 157 prizes in the best shows for the past three seasons, and the fact that the most prizes at all America's best shows went to those who raise **Aldrich Strain White Orpingtons,** proves the **superiority** of this strain over all over all others. Our customers this season have won in the State Fairs of Ohio, Kentucky, Tennessee, Wisconsin and New York, and many other shows in this country and Canada.

Your success as a poultry breeder depends largely upon securing foundation stock or eggs from the best strain of the **best and most popular variety of poultry—the S. C. White Orpingtons.** They are the **greatest winter layers,** mature quickly, making broiler size in eight weeks, and add to these useful qualities their **hardiness, beauty and gentleness,** and you have the **ideal chicken,** and those breeding **Aldrich strain** have **no trouble to sell** all the stock and eggs they can produce **at good prices,** as the **superiority** of the **Aldrich strain** is now acknowledged by all.

We are the largest farm in the world today, making a specialty of White Orpingtons, and today specialists lead the world in every profession and business. The **Aldrich strain** has been **perfected by several years of hard work,** concentration and experience devoted to this **one variety.** For several years we have devoted all our time and attention to a single object—the perfection of the **Aldrich Strain S. C. White Orpingtons.**

Our Birds Are BRED TO LAY with the Same Care They Are BRED TO WIN

Our young birds this year are much superior to those of last season, and we have out more early stock that will be up to weight for the early fall fairs, but on account of the big demand which we expect this season, we would advise you to **book your order at the earliest possible moment** to avoid disappointment and get the best possible selection, as we only sell to one customer in each class at a show. We condition all birds free of charge, and will send them to you in faultless form.

Aldrich Poultry Farm

5081 North High Street **Columbus, Ohio**

AMERICAN POULTRY JOURNAL

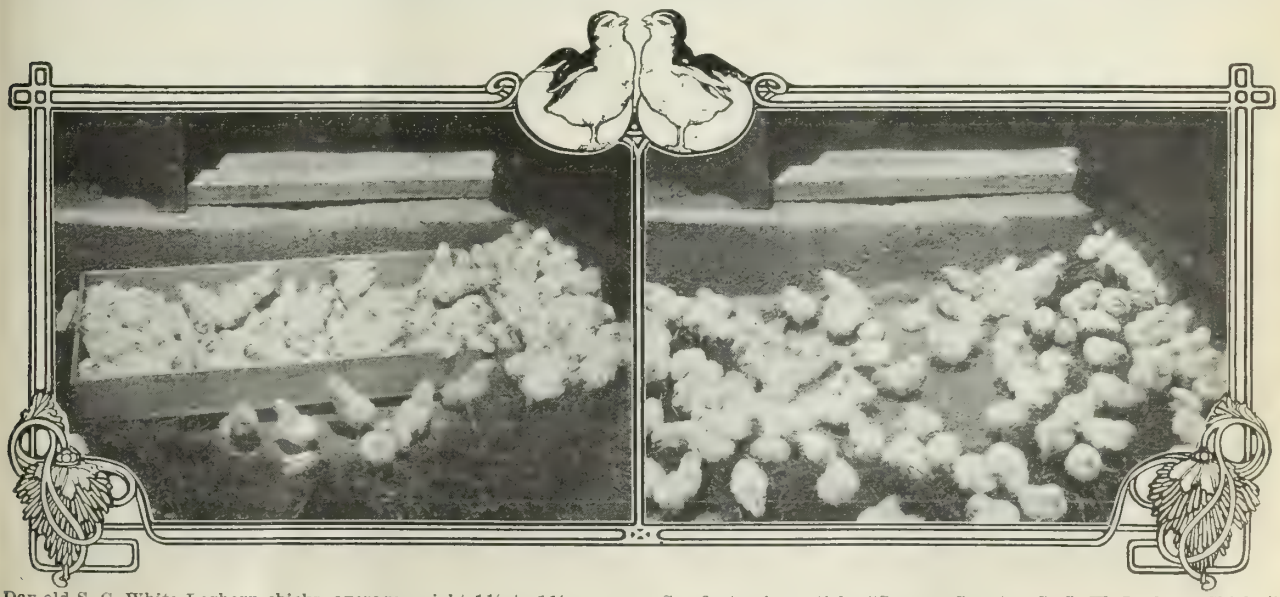
Success Growing S. C. W. Leghorn Chicks

First Prize Article in A. P. J. 1914 Chick Growing Contest with Illustrations That Show How The Chicks Grow

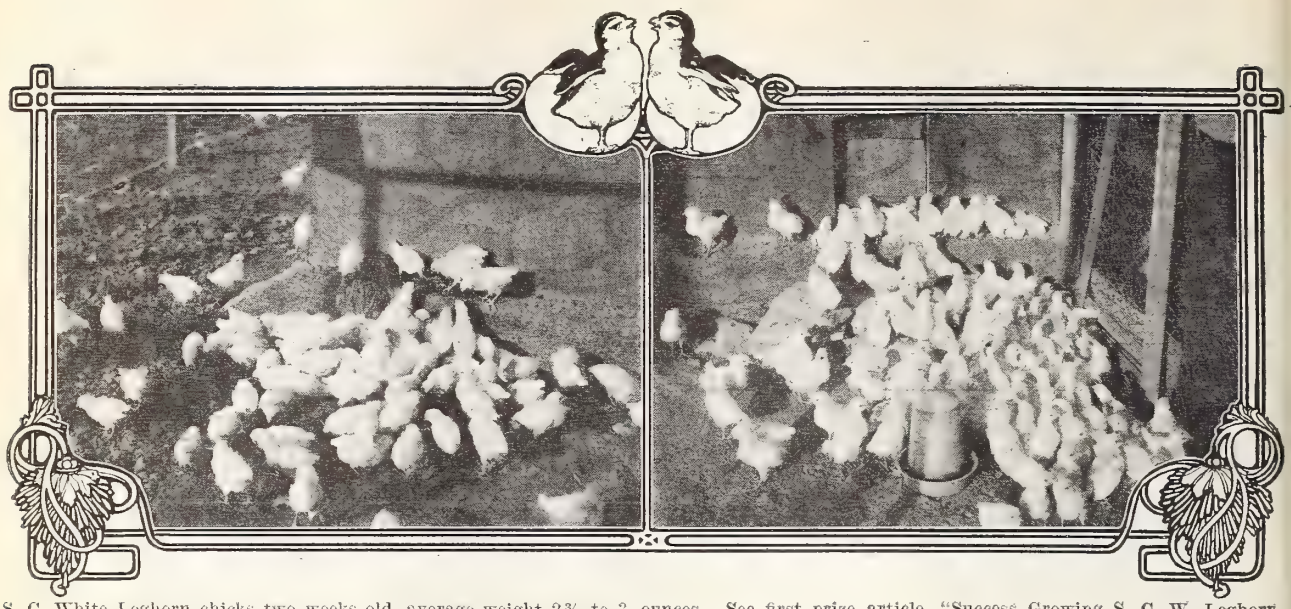
By C. H. Krumm, Towanda, Pa.

AS A BEGINNER in the poultry business, I hardly knew just how to make a start, but decided for one thing that I would start in as a contestant in the AMERICAN POULTRY JOURNAL Chick Growing Contest.



In the first place I believe that the selection and care of the breeding stock is a very important matter and I try to have only good, healthy birds in the breeding pens. Not more than fifteen hens are given to a good lively cock or cockerel. The birds are comfortably housed and are fed well on good grains, dry mash and green food, and they have plenty of exercise, all of which helps to get good, fertile eggs that will hatch strong chicks.

This is the first year that we have hatched our own chicks. We use a Cyphers incubator and after regulating the machine and keeping it steadily at a temperature of 103 degrees for a day or so we put in 211 good shaped eggs which had been carefully washed with clean water and a clean cloth. After the eggs had been in the machine for 48 hours we began turning the eggs, morning and night; changing the trays from side to side in the morning and end for end at night, with very little cooling the first week, keeping the trays out of the incubator just long enough to turn the eggs.

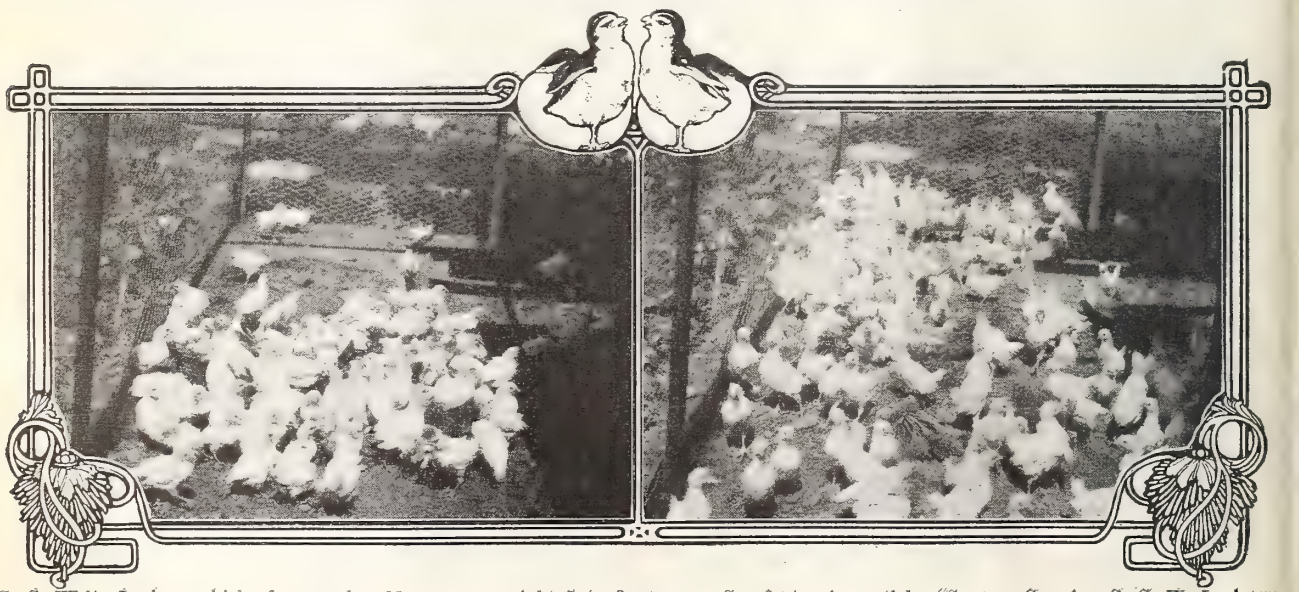


At the end of the seventh day the eggs were tested and eleven were taken out, leaving 200 eggs in the machine. The second week the machine ran at from 103¼ to 103½ degrees, and a second test was made at the end of the seventeenth day, when fourteen more eggs were taken out because they showed no development since the first test. The 186 eggs left in the incubator were turned until the night of the eighteenth day and cooled until the nineteenth night. The cooling process consisted of leaving the eggs out of the machine until an egg held against the eyelid felt just warm.

Some of the eggs began to pip the afternoon of the twentieth day, when the ventilators in the bottom of the machine were closed to keep all natural moisture in and the temperature was allowed to go to 104 degrees. The chicks started to come out in the evening and by the middle of the night they were coming out lively. When about one-third had hatched the door was opened and the trap in egg tray opened so that chicks would fall into the nursery as they came to the glass front, and the door was then quickly closed. The hatch was all over on the afternoon of the twenty-first day and by 5 o'clock they were dry enough to take out of the incubator. I had a stove brooder in a brooder house all ready to receive them.

One hundred and sixty-seven chicks hatched and they were put around the stove brooder and were a sight worth seeing. The floor of the brooder house had been well covered with sand and hay seed scattered on top of it. The little fellows would back up to the heat in a circle around the stove and were evidently comfortable, contented and happy. The temperature was kept at 95 degrees the first few days and as they grew and the

Day-old S. C. White Leghorn chicks, average weight 1¼ to 1½ ounces. See first prize article, "Success Growing S. C. W. Leghorn Chicks."



S. C. White Leghorn chicks two weeks old, average weight 2¾ to 3 ounces. See first prize article, "Success Growing S. C. W. Leghorn Chicks."
